Operations

Day-to-day guides for the people who run the property: front office, reservations, cashiering, excursions, spa and the night audit.

These guides assume the property has been set up. If it has not, start with the Configuration guide.

Front Desk, Reservations and Tape Chart →

The daily screens, badges and buttons, moving guests between rooms and split stays.

Dashboard and Housekeeping →

The dashboard and its status chips, customising it, and running the Housekeeping board.

Group blocks and Client Relations →

The group's Posting Master, profiles, deactivating and eRegistration.

Online bookings at the desk →

Where bookings from the property's website appear and how to handle them.

Keyboard shortcuts →

Search and act on a booking from the keyboard, jump to any page with G then a letter, Front Desk list keys and the cheat sheet (press ?).

Install the app →

Put the app on your phone's home screen or your computer: Android, iPhone and desktop.

Notifications →

The bell in the header: what it tells you, and who receives what.

Daily Reports →

Reading a report with its figures and charts, and downloading it as PDF, Excel, delimited text or CSV.

Price calendar and stop sale →

Reading prices on the calendar, closing dates to sale, and overriding a closed date.

Front Desk, Reservations and Tape Chart

For front office and reservations staff: the daily screens, what the badges and buttons mean, moving guests between rooms and handling split stays.

Front Desk

The tabs follow the guest's journey: **Arrivals**, **In-House**, **Room moves** and **Departures**, and the tiles above them show the same four numbers in the same order. On a wide screen a switch at the right of the search box changes the list between a **table** and **cards**; the choice is remembered on that computer. Phones always show cards, and skip the tiles: the four tabs carry the same counts.

Each row or card shows the two buttons you reach for in that tab, and everything else sits behind the **...** menu:

Tab	Buttons	In the ... menu
Arrivals	Check in (reads Assign & check in while the booking has no room yet), Register (prints the registration card)	Assign room, eRegistration link, Traces, View details, Mark no-show
In-House	Traces, Folio	Move room, View details
Room moves	Traces, Folio	Move room
Departures	Check out, Folio	Traces, View details

A small **warning triangle**beside an arrival's name means the guest's profile is incomplete. Hover over it to see exactly what is missing (nationality, date of birth and/or an ID document). It never stops a check-in: you can complete the details in the check-in steps or skip them.

Check in opens the check-in steps. If the booking has no room yet, the button reads **Assign & check in** and the first step is choosing a room. If the booking has no room type or rate either, that step says so and offers **Choose room & rate**, which opens the booking to pick them; then come back and check the guest in.

The folio on a phone: the header with the close button stays at the top while you scroll, and **Post charge** and **Post payment** are pinned at the bottom of the screen. Each opens

its form as a sheet from the bottom; posting closes it.

Auto-Assign (a button on the Arrivals tab, and under **More** at the top of Reservations, next to Tape Chart) gives rooms to every booking that has none. It first shows a window listing each booking and the room it would get, and the bookings that could not be placed with the reason. Nothing is saved until you press **Assign**.

From the keyboard: on a computer, `J` and `K` move down and up the lists, `C` checks in, `O` checks out (it always asks first), `F` opens the folio, `A` assigns a room, `M` moves a room, `1` to `4` switch tab and `Enter` opens the booking. A short reminder is shown above the list, and the full list is behind `?`. See Keyboard shortcuts.

Reservations list

New booking is the main button at the top. **Tape Chart** and **Auto-Assign** are under **More**next to it, on a phone as well as on a computer. While the list loads you see grey row-shaped placeholders in place of the bookings.

In card view each booking shows the guest's name, the names of the guests sharing the room in lighter type, a gold star for a VIP and a small repeat mark with a number for a returning guest (the number is their previous stays). The room is at the top right with the status under it. Small badges under the dates show what is filled in on the booking:

Badge	Means
Transportation	Transfer details are on the booking.
Trace	There are open traces or messages.
Deposit	A deposit has been collected (before arrival).
Registration / eRegistration	The registration card is done, or the guest has submitted eRegistration and it is waiting to be applied.
Special request	The booking has special requests.
Split stay / Room move	The stay is in more than one room segment, or a move is scheduled.
Override rate	The rate is not the rate plan's own: a flat rate was typed, or a room change kept the old rate.

Reading the Tape Chart

Rooms run down the left, grouped by floor, and days run across. Use **7 days**, **14 days** or **30 days** to change how many you see, the arrows to move a week at a time, **Today** to jump back to the business date, and the date box to jump to any date.

What you see	Means
A bar with a surname and a number	A booking in that room for those nights. The number is the booking's confirmation number. Hover over the bar for the guest's full name and the status.
Bar colour	The status: reserved, in-house, checked out or no-show, as in the key above the chart. A room with no bar is free.
Unassigned row	Bookings that have no room yet, shown at the top. Drag one onto a room to give it one.
Highlighted column in the date row	Today (the business date).
Shaded columns	Saturdays and Sundays.

The date row and the room names stay in view as you scroll sideways or down, and booking bars slide underneath the room names.

Click an empty day in a room to start a booking for that room and date.

Click a bar to see the booking and its actions.

Moving a guest on the Tape Chart

Drag a booking onto another room. While you drag, rooms turn **green** if the booking fits all its nights and **red** if it does not.

Dropping on a red room is blocked straight away. The message says who has the room and when, and offers **Adjust the dates**, which opens the booking.

A room of the **same type** is simply a move.

A room of a **different type** affects the rate: choose to recalculate at the new type or keep the current rate. A reason is needed for an in-house guest and optional before arrival.

After a move, the booking **pulses twice** in its new place so you can see where it went (not when your device is set to reduce motion).

An in-house guest moves from the business date onward, the old room is marked dirty, and a guest due out today has nothing left to move. Only reserved and in-house bookings can be dragged.

If the stay has several room segments, each segment is its own bar and a drag moves only that bar: its dates, the other segments and their rooms stay as they are, and the fit check looks at that segment's own nights. A different room type changes the rate of that segment only, and the booking's **Room move** badge updates. An in-house guest can only drag the segment they are in tonight; a move splits that segment from tonight to where it ends and leaves later segments alone. To change dates, or a segment you cannot drag, use **Adjust the dates** (Edit reservation).

Split stays

When you edit a reservation and press **Add segment**, the new segment starts as a copy of the previous one. Each segment has its own **Room type** and **Rate plan**, and every night is priced on the segment it belongs to. Packages that come with a rate plan (such as breakfast) are charged only on the nights of the segments on that plan.

> Segments must run back to back with no gaps. The guest's room for tonight is the segment that covers tonight, which is what check-in and a room move use.

Dashboard and Housekeeping

For managers, front office and housekeeping supervisors: reading and customising the dashboard, and running the Housekeeping board.

The dashboard

The dashboard is the first page after you sign in. Under the welcome line a row of **status chips** shows the day at a glance, and below it are the tiles you have chosen: figures, charts and lists for the property you are working in. The **7d / 14d / 30d** switch sets how many days the charts cover, and **Refresh** reloads the figures.

Chip	Means	Opens
Night Audit	Up to date, running (with the step it is on), or how many days behind it is. Red means more than one day behind.	Night Audit
Cashier shifts open	How many cashier drawers are open now.	Cashiering
Channel connections	Whether the property is connected to its channel manager and whether anything has failed.	(shown for information)

A chip that opens another page ends in a small arrow, and shows where it leads when you hover over it.

Figures, charts and movement

Each tile shows its key figure large, with a small pill for the change (for example against the same day last week). The first time a screen opens, the figures count up to their values, lines draw in, bars rise, doughnuts sweep round and the tiles lift in one after another; lists and tables show their rows one after another. This plays once when you open the screen. Refreshing, filtering, sorting and paging do not replay it, and a refresh only moves a figure from its old value to its new one.

> If your computer or phone is set to **reduce motion**(in the system's accessibility settings), nothing moves: you see the finished screen at once. Printouts and PDF

> downloads never animate. Screens you work in all shift, such as forms, settings, the Housekeeping board and the menu, stay still.

Customising the dashboard

Use the cog beside **Refresh**, or the **Customise dashboard** button that appears when no tiles are showing. Changes apply straight away; there is no Save button. In the window you can:

- switch any tile on or off, and choose how wide it is;
- group tiles onto your own **pages** (tabs), rename and reorder them; a tab only appears once there is more than one page;
- **Reset to default**, which asks first.

> The layout is yours: it is saved for your sign-in and the property, and nobody else sees your changes. You only see tiles for the areas your role can view. If your role can view none of them, the dashboard says so instead of showing an empty page.

The Housekeeping board

Rooms are shown as cards grouped by floor: three across on a desktop, two on a tablet and one on a phone. The top of each card shows the room number and its status (**Dirty**, **Clean**, **Inspected**, **Out of order** or **Out of service**), with a spanner beside it when there is an open maintenance issue. Under a thin line, a short list gives the **Type** of room, the **Stay** (who is in the room and how many, or Vacant) and the open **Task**. A **Request**, **Staff** or **Tech** line appears only when the room has a special request, an attendant or a technician, so most cards stay short. The tabs above the board filter by status and show how many rooms are in each; a second filter shows one attendant's rooms.

A room whose guest is **due out today** shows **Due out** in bold amber on its Stay line, and a room with someone arriving shows **Arrival today** in bold blue, so you can see at a glance which rooms will need cleaning next. The board stays in room order. The first time the board opens, the cards rise into place one after another; they do not move again when you filter, refresh or change a status.

Button	What it does
Select	Switch on selection: tick rooms to change them together. It becomes Done while you are selecting.
Select all	Appears once at least one room is ticked. Ticks every room on screen (with a status filter on, only the rooms you can see).
More → Task sheets	Opens the task sheet for an attendant.
More → Refresh	Reloads the board.
Assign floor	On each floor's heading: give the whole floor to an attendant.

With rooms ticked, a bar appears with **Mark clean**, **Mark inspected**, **Mark dirty**, **Mark OOO**, **Assign** (to an attendant) and **Report issue** (to Maintenance). The menu on a single card offers the actions for that one room.

From the keyboard

Press `G` then `D` to open the dashboard, or `G` then `H` to open Housekeeping, from any page. Press `?` for the whole list. See Keyboard shortcuts.

Group blocks and Client Relations

For reservations, front office and sales staff: how a group block bills its charges, and how guest, company and agent profiles are kept.

Group blocks

The list can be shown as a table or as cards (on a wide screen; phones always show cards). A card carries small badges for what is set on the block: the account it bills, the cutoff date (amber when it is close, red once passed), the rooms held for each room type, **Overbooked** when more rooms are picked up than held, and where its Posting Master is.

The Posting Master

Every block has a **Posting Master**: a reservation of its own, in a room that only exists for the block, whose folio is the block's **master folio**. Charges of the group's guests that are billed to the master go on that folio, so one bill can be settled for the whole group (or sent to the account the block bills).

It is created automatically when the block becomes **Definite**. For a tentative block, **Create master folio** creates it by hand.

It is checked in automatically when the first reservation of the block checks in.

It follows the block's dates, and is cancelled with the block if nothing has been posted to it. If it holds charges or has arrived, deal with those first.

It is not a pickup, so it does not use up a held room, and Night Audit does not charge it a room.

> Each booking in the group has its own eRegistration link. There is no group-level eRegistration link on the block.

Client Relations

The directory has four lists: guests, corporate accounts, travel agents and staff. Each profile is one card with the name, the email in small type, and the badges that matter for

that kind of profile:

List	Badges
Guests	Number of visits (or No stays yet), VIP level, nationality
Corporate accounts	Credit account, number of bookings
Travel agents	Commission, IATA number, credit account, number of bookings
Staff	Nationality

Click a card to open the profile. The **...** menu edits it. A sort (recently updated, name, most visits) and **Export CSV** sit above the list and apply to the profiles shown.

Deleting or deactivating a profile

Only a brand-new profile can be **deleted**. As soon as anything is linked to it (a booking as guest, travel agent or accompanying guest, a folio, a group block it pays, a registration, an eRegistration or negotiated rates) the menu offers **Deactivate** instead.

> A deactivated profile is hidden from searches and pickers, keeps all its history and shows an **Inactive** badge in Client Relations.
>
> **Reactivate** brings it back.
>
> A profile with a booking still to come or in the house cannot be deactivated until it is done.

eRegistration

The form is pre-filled from the guest's profile. The lead guest's name is fixed (if it is wrong, correct it on the profile); every other detail can be updated by the guest, and the changes go onto the profile when reception applies the registration. A returning or VIP guest sees a small sparkle by their name.

Online bookings at the desk

For front office, excursion and spa staff: where bookings made on the property's website appear, and how to handle them.

Rooms

A website room booking is an ordinary reservation. Its remarks begin with "Booked via website" and a `WEB-…` reference, followed by the note your administrator set. Find it by confirmation number or that reference. The guest's profile is matched by email on return visits.

Excursions

On the departure's manifest, online bookings are marked **Online** with the guest's reference (e.g. `EXC-7K3QX9MD`), which is what the guest will quote.

Paid online means the website took payment: the bill is already settled with the online payment method. Otherwise the guest pays you.

Check payment means the amount the website reported differs from the total — check with your online payments before the trip.

Seats held by the website while a guest pays show above the manifest as "held online". They are released automatically if not booked.

Cancel, mark no-show, cancel the whole departure or move guests exactly as for any booking. The website is told automatically.

Spa

On the spa schedule, online bookings show · **Online**. A time a website is holding while its guest pays shows as **Held online** with a dashed border; it is released automatically if not booked.

Click an appointment to open its panel: guests and therapists, room, price, payment, notes and the online reference.

From the panel: **Check in** when the guest arrives, **Start treatment**, **Complete**; or **No-show** and **Cancel**.

Action	What happens to the money
Cancel before the cutoff	The charge is voided (needs cashiering access; otherwise it is left for cashiering to void).
Cancel after the cutoff	Needs a manager. The spa's late-cancellation fee applies unless the manager waives it.
No-show	Allowed once the grace time after the start has passed. The spa's no-show fee applies unless a manager waives it.
Complete	If the spa charges at completion, the charge is posted now, at the price agreed at booking.

Each time, a small notice in the top-right corner of the screen (at the bottom on a phone) confirms the action and says what happened to the charge — voided, fee posted, or left for cashiering.

Refunds for paid online bookings

> When a booking the website took payment for is cancelled, the charge comes off the bill but the payment stays as a credit, and the booking says a refund is due. The **website refunds the guest** through its own payment provider (the payment reference is on the booking). Record the refund on the bill so it balances.

Transportation

For front office, airport reps and dispatch: booking transfers, putting guests from different reservations on the same boat, the day's board on a phone at the airport, and how transfers are charged.

Where: Dashboard › Transportation, and the Transportation card on a reservation · **Who:** Anyone with Transportation

> Transportation is an add-on, switched on per property. Without it, a reservation's **Transport** section holds just the flight number, the transport number and the flight time for the pickup and the drop-off — see the end of this page.

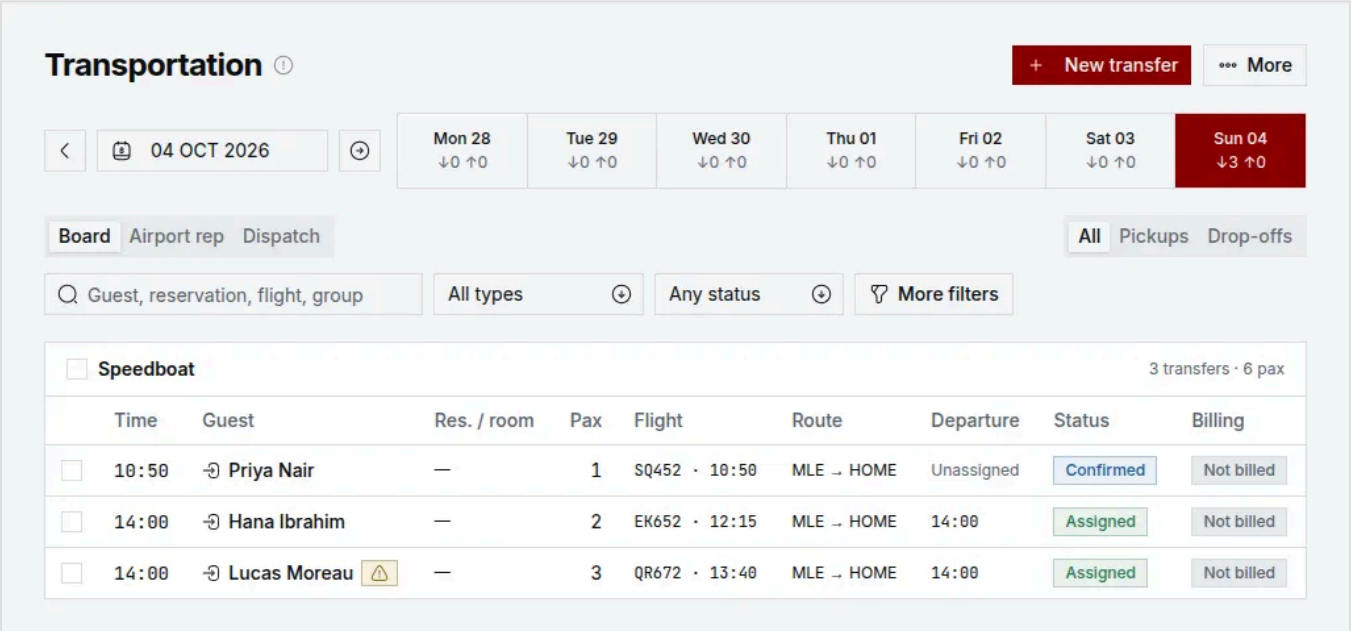

The words we use

Word	Means
Transfer	One guest party travelling in one direction. A guest arriving and leaving has two.
Pickup / Drop-off	Pickup brings the guest in (arrival); drop-off takes them out (departure).
Departure	One boat, seaplane or car leaving at a time. Guests from several reservations ride on the same departure — its passenger list is the manifest.
Airport leg	The flight part: airline, flight number, landing or take-off time, the airport rep who meets the guest.
Needs attention	A warning that the timing doesn't work, or the flight changed. It never stops you saving.

Daily workflow

1. **Morning — review.** Open Transportation. The week strip shows arrivals (↓) and departures (↑) per day. **More › Suggested transfers** lists this week's arrivals and departures with no transfer yet; tick them and create drafts.
2. **Confirm.** Open each draft, add the flight and route, and confirm it. A draft is never confirmed for you.

3. **Plan the departures. More › Departures from route times** creates the day's boats from the routes' usual times. Then on the Board, tick guests and choose **Put on departure** — or **New departure from selected**.
4. **Assign reps and boats.** Tick transfers and choose **Assign airport rep**. Open a departure to set its boat, provider and captain.
5. **During the day.** Watch for Needs attention, move guests between departures, mark departures Departed and Completed — completing a departure completes everyone on it.
6. **Night Audit** posts the charges (below). Check the board for anything Pending.

Booking a transfer

From the board choose **New transfer**, or from a reservation's **Transportation** card choose **Add transfer** (or one of the suggested pickup / drop-off buttons). Find the reservation by confirmation number, guest name or group code; the date and party fill in from the stay. For someone with no stay — a local traveller — choose **Traveller without a stay** and enter their name and phone.

Pick the **route**: the price appears straight away, with tax, from the route's rate. No rate means complimentary.

On an airport transfer, fill the **flight**: number, time (lands for a pickup, leaves for a drop-off), terminal, the airport rep and the meeting point and luggage.

More details holds the provider, boat, driver or captain, a seat or ticket note (for information only) and notes.

Managers can **set the price by hand** with a reason.

One transfer per direction: add the return as its own transfer.

Groups

Reservations in a group block show the group's code on every transfer. Filter the board by group (**More filters**), or search the group code when adding guests to a departure, then select them all at once.

Departures (manifests)

Open a departure from the **Dispatch**view to see who is on it, seats used against the boat's seats, and each guest's flight. From there:

Add passengers — search by name, reservation, flight or group, tick several and add them.

Move to… on a guest, or **Move everyone to…**, puts them on another departure the same day.

The **×** takes a guest off; they stay booked, waiting for a departure.

Cancel departure (weather, a breakdown) takes everyone off, still booked, so you can put them on another boat.

> More passengers than seats is shown in red but still saved — sometimes a bigger boat is sent. Fix it by moving guests or changing the boat.

Needs attention

Warning	What to do
Departs N min after landing	The boat leaves too soon after the flight lands. Move the guest to a later departure.
Reaches the airport N min before the flight	The drop-off arrives too close to take-off (the crossing time counts). Move them earlier.
Flight time changed	The flight moved after the guest was put on the departure. Check it still works and choose Keep, or move them.

Warning	What to do
Flight details missing	An airport transfer without a flight number or time.
The reservation is cancelled / a no-show	The stay is off but the transfer is still booked. Cancel it or mark it a no-show; post a fee by hand if one applies.

The allowance (default 60 minutes) is set in the Hub. Warnings never stop you saving.

At the airport, on a phone

On a phone the top of the page is the day and a week calendar: each day shows its date and how many pickups (↓) and drop-offs (↑) it has, so tap a day to jump to it. Under it, switch between **Board**, **Airport rep** and **Dispatch**, and between all transfers, pickups and drop-offs. Search sits next to a **Filters** button, which opens every other filter (type, status, airport rep, route, provider, group and the two switches) in a sheet from the bottom.

The **Airport rep** view lists the day's flights in time order, each with the guest, party, a **call** button for the guest's phone, the meeting notes and which boat they go on. Filter by your own name under **Filters › airport rep**. Tap a card for everything else. On the **Board**, each transfer is one line with the time on the left, then the guest, room, party, flight and boat. **Dispatch** shows each boat with its passenger list — the view for the jetty. Selecting several transfers at once is done from a computer.

Charges and Night Audit

When	What is posted
Pickup	At the Night Audit of the arrival day, once the guest has checked in.
Drop-off	At the Night Audit of the guest's last night, dated the departure day — so it is on the bill when they settle at check-out.
Traveller with no stay	At the Night Audit of the transfer day, on their own walk-in bill (Fast Post can take the payment).
Missed day	Caught up at the next Night Audit.

Each transfer is charged **once**: running Night Audit again, or an Advance Bill, never charges it twice. It posts with the rate's charge code and tax, and follows the reservation's routing (group master bill, routing rules).

Drafts, no-shows and cancellations are **never** charged automatically. Complimentary and non-billable transfers show as Complimentary.

If there was no open bill to post to, the transfer shows **Pending** and Night Audit lists it. Open a folio and use Post charge.

By hand: no-shows, cancellations, fees

Open the transfer and choose **Post charge**: the full rate, or a **custom amount** with a reason — for a no-show or late cancellation fee — optionally on a different charge code. To select several on the board, tick them and choose **Post charges**. **Waive charge** (with a reason) stops Night Audit charging it; **Bill again** undoes that.

A posted charge is corrected like any folio line: **Void charge** on the transfer (or void it on the folio — the transfer follows) keeps the line on the bill marked void, with your reason. Nothing is ever deleted. These actions are on the activity log.

Daily Transportation Report

More › Export report: choose dates (up to 62 days) and PDF, CSV or Excel. Transfers are grouped by day, transport type and direction, in departure order, with each one's departure, flight, airport rep, provider and boat, status and billing, and the passenger total per group. It is also in **Daily Reports** under Transportation.

The reservation's Transport section

Every reservation has a simple **Transport** section: for the pickup and for the drop-off, the **flight no.**, the **transport no.** (boat, vehicle or ticket) and the **flight time** — when the flight lands for the pickup, when it leaves for the drop-off, on the arrival and departure days. It never charges anything.

Without Transportation, fill it in with **Add** or **Edit**. Clear all three fields of a side to remove it.

With Transportation on, it is read-only and shows what is booked here: the flight, the boat and the flight time. Add or change transfers on the **Transportation** card below it,

or on the board.

A charge entered on a reservation before the section was simplified still shows there, and still posts at Night Audit as before.

Keyboard shortcuts

For front office, reservations, cashiers and anyone who wants to work faster: find a guest, jump to a page, check someone in or out and post a charge without reaching for the mouse.

Everything here is an **extra**. Every button and menu works exactly as before; the keys are just quicker ways to the same screens. Press `?` at any time, on any page, to see the list in the app.

> **SAFE BY DESIGN**
>
> The single-letter keys only work when nothing is being typed into and no window is open, so they never get in the way of writing a name or a note.
>
> Nothing that cannot be undone is one keystroke. **Check out** always asks you to confirm first, and there is no key for no-show, cancel or void.
>
> Each person only sees and can use what their role allows, the same as the menu.
>
> If the letter keys ever get in your way, you can switch them off (see the end of this page). `Ctrl` + `K` and `?` keep working.

Everywhere

Keys	What it does
`Ctrl` + `K`	Search and commands (⌘ K on a Mac)
`/`	Search and commands, when you are not typing
`?`	This list of shortcuts
`Ctrl` + `B`	Show or hide the menu
`Esc`	Close a window, or step back out of a list of actions

Search and commands

Press `Ctrl` + `K` (`⌘` + `K` on a Mac) or `/`. Type at least two letters of a guest's name, a confirmation number, a room number or a company, and the matching bookings, rooms

and profiles appear. Typing the name of a page or an action shows those too, with the shortcut for the page on the right.

Keys	What it does
↑ or ↓	Move through the results
Enter	Open the highlighted result
Tab or →	Show what you can do with a booking (check in, check out, folio, post a charge, move room)
Esc	Back from a booking's actions to the results

Enter on a booking opens it, as before. Press Tab (or →) on a booking instead to see what you can do with it right there. The list depends on the booking and on your role:

Booking	What Tab offers
Due in today, no room yet	Assign room & check in, Folio, Open the booking
Due in today, room assigned	Check in, Folio, Open the booking
In-house	Folio, Post a charge (Fast Post, with the room already chosen), Move room, Check out, Open the booking
Checked out, cancelled or no-show	Open the booking

Each choice takes you to the screen that already does the job, with its own checks: **Check in** opens the check-in steps (and asks for a room first if there is none), **Folio** opens the folio, **Move room** opens the room move and **Post a charge** opens Fast Post on that guest's room. **Check out**asks “Check out this guest?” first, and after you confirm, the usual messages about an early check-out or an outstanding balance still appear.

The same box also offers these actions, for the roles that can use them:

Action	What it does
New booking, Walk-in booking	Start a booking.

Action	What it does
Post a charge, Fast Post	Open Fast Post to charge a room or a walk-in bill.
Close shift	Open Cashiering with the close-shift window ready, where you count the drawer and confirm. If you have no open shift it tells you so.
Run a report	Open Daily Reports.
New guest profile	Start a guest or company profile.
Keyboard shortcuts	Open the cheat sheet.

Go to a page: G, then a letter

Press `G`, then one letter. A small note at the bottom of the screen reminds you that it is waiting; if you press nothing for a moment, or press `Esc`, it is cancelled. You can only reach the pages your role can open.

Keys	Goes to
`G` then `D`	Dashboard
`G` then `F`	Front Desk
`G` then `R`	Reservations
`G` then `T`	Tape Chart
`G` then `A`	Availability
`G` then `B`	Group Blocks
`G` then `C`	Client Relations
`G` then `H`	Housekeeping
`G` then `M`	Maintenance
`G` then `P`	Fast Post
`G` then `E`	Excursions

Keys	Goes to
G then S	Spa
G then X	Transportation
G then V	Revenue
G then W	Cashiering
G then Y	Debtors
G then N	Night Audit
G then O	Daily Reports
G then L	Activity Log

Front Desk lists

On the **Front Desk** page, move down the list with J and up with K. The highlighted row is the one the other keys act on. The keys do nothing while you are typing in the search box, so you can look a guest up and then press Esc or click the page to go back to the keys.

Key	What it does
J	Next row
K	Previous row
Enter	Open the selected booking
C	Check in (Arrivals) — opens the check-in steps; picks a room first if there is none
O	Check out (In-House and Departures) — always asks first
F	Open the folio
A	Assign a room (Arrivals without a room)
M	Move room (In-House)

Key	What it does
`1`	Arrivals tab
`2`	In-House tab
`3`	Room moves tab
`4`	Departures tab
`Esc`	Clear the selected row

A short reminder of the main keys is shown above the list on wide screens. Phones and tablets do not use these keys; they keep the buttons and the **…** menu.

Turning the letter keys off

Press `?`, then use the **Quick keys** switch at the top of the list. It affects the single-letter keys only (the Front Desk list keys and `G` then a letter). `Ctrl` + `K`, `/` and `?` always work. The setting is remembered on that computer and browser, so each desk or person can choose for themselves.

> **GOOD TO KNOW**
>
> The keys use the English letters printed on the keycaps, so they work with any keyboard layout that has them.
>
> While a window is open (a check-in, a folio, a confirmation), the letter keys are paused so you can type freely.
>
> Screen-reader and voice-control users can switch the letter keys off and keep the rest.

Install the app

For everyone: put Uppsolut Stay on your phone's home screen or your computer, so it opens like an app, full screen, in one tap.

Nothing is downloaded from an app store. The installed app is the same Uppsolut Stay you use in the browser, with the same sign-in and the same permissions. It simply opens in its own window without the browser's address bar. Installing is also what lets the app send notifications to your phone: see Notifications.

Where to find Install app

The first time you sign in you receive a single notification in the bell, **Install Uppsolut Stay on your phone or computer**. Nothing pops up on the screen. Once you have opened that notification, **Install app** appears in your **Account** menu (click your name at the bottom of the left-hand menu). It is not shown if the app is already installed.

On Android, Windows and Mac, choosing **Install app** opens your browser's own install window. On iPhone it shows the steps below.

Android (Chrome)

Open Uppsolut Stay in Chrome and sign in.

Open your **Account** menu and choose **Install app**, then confirm.

Or open Chrome's ⋮ menu and choose **Install app** (or **Add to Home screen**).

iPhone and iPad (Safari)

iPhones do not offer a one-tap install, so it takes three taps. It must be done in **Safari**, not another browser.

Open Uppsolut Stay in Safari and sign in.

Tap the **Share** button.

Scroll and tap **Add to Home Screen**, then **Add**.

> **NOTIFICATIONS ON IPHONE**

> Phone notifications only work from the app on the Home Screen, never from a Safari tab, and need iOS or iPadOS 16.4 or newer.

Windows and Mac (Chrome or Edge)

Open Uppsolut Stay and sign in.

Open your **Account** menu and choose **Install app**, or click the install icon at the right end of the address bar, or open the browser menu and choose **Install Uppsolut Stay**.

The app opens in its own window and is added to the Start menu or Applications folder.

Good to know

The app needs an internet connection, the same as the browser. It does not keep a copy of rooms, rates or balances, so what you see is always current.

On a shared computer or phone, sign out when you finish, exactly as you would in the browser.

To remove the app, press and hold its icon (phone) or use the menu inside the app window (computer) and choose **Uninstall**.

You get the install invitation once, ever. If you do not want it, you can switch off **Invitation to install the app** on the Notifications page, Settings tab. Install app will then not appear in the Account menu, and the browser's own menu still works.

Notifications

For everyone: the bell at the top right tells you what needs your attention, so you do not have to go looking for it.

Every signed-in person has a bell in the header, in the dashboard and in the Hub. A small red number on it is how many notifications you have not opened yet. Click the bell to see them, newest first.

Using the bell

Click a notification to open the screen it is about. It is marked as read.

Mark all read clears the number in one click.

Show older at the bottom of the list loads earlier ones.

Unread notifications are in bold with a coloured dot: red for urgent, amber for something to act on, grey for information.

The bell updates when you come back to the window. It does not need the page to be refreshed.

All notifications and your settings

Choose **All notifications and settings** at the bottom of the bell. The page has two tabs:

Inbox: everything you have received. Switch on **Unread only** to filter, **Mark all read** to clear, **Show older** to go back further.

Settings: for each kind of notification, whether it shows in the **Bell** and whether it also goes to your **Phone**. Turning the bell off for a kind also turns its phone notifications off. Security notices and announcements always show in the bell.

Your choices are yours alone. They do not change what anyone else receives.

Notifications on your phone

Once the app is installed, the bell can also send urgent and action-needed notifications to your phone or computer, even when the app is closed. Informational ones, such as the business date moving on, stay in the bell.

Open the bell and, at the bottom of the list, tap **Turn on**.

Allow notifications when your phone or browser asks.

Tap a notification to open the app on the right screen.

This is per device. Turn it on on each phone or computer you want it on, and **Turn off** in the same place.

Signing out, including being signed out for inactivity, turns it off for that device, so a shared phone or desk computer never shows the next person your alerts.

On an iPhone or iPad it only works from the app on the Home Screen, not from a Safari tab.

If you do not see the Turn on button, phone notifications have not been switched on for this system yet. Ask your administrator. The bell works either way.

Delivery to phones is best effort: a notification can arrive late or, rarely, not at all. The bell always has the full list.

What you are told about

You only receive what is relevant to you: your own property, and only the kinds of notification your role gives you access to.

Notification	Who receives it
The business date has moved on (a new day has started)	Everyone who works at that property
Night Audit did not finish or fell behind	People who have access to Night Audit
A new online booking arrived from a booking channel	People who can create reservations
An online booking could not be added and needs a person	People who can create reservations
A channel connection stopped working	People who manage integrations
A guest booked an excursion or spa treatment on the website	People who can create bookings for that service
A maintenance task was assigned to you	The person it was assigned to

Notification	Who receives it
Rooms were assigned to you to clean	The room attendant they were assigned to (one notice, however many rooms)
A transfer in the next two days has a problem, such as a boat that leaves before the flight lands, or a flight time that changed	People who manage transport manifests
A cashier shift has been open for over 16 hours	The cashier, and people who supervise cashiering
A group's cut-off date is today or tomorrow and rooms are still not picked up	People who manage group blocks
A sign-in from a browser or device your account has not used before	You, about your own account
Osta support opened a session in your enterprise	People who manage users
An announcement from your administrators	Everyone, or the property it was sent to

GOOD TO KNOW

You are not notified about something you did yourself.

Cashier shift, transfer and group cut-off notifications are checked every few minutes, and each problem is announced once. A transfer is announced again if its flight time changes.

Notifications you have read are removed after 90 days, and all of them after 180 days.

Notifications never include guest names or amounts. Open the screen to see the details.

The Uppsolut team uses the same bell in its own console, with its own notifications about approvals, licences, billing and connections it runs. Those never appear in your settings.

Setup and the operations dashboard are in the **Account** menu at the bottom of the left-hand menu, where Setup and Operations buttons used to be in the header.

Daily Reports

For managers, front office, finance and housekeeping: reading a report on screen, and downloading it as a PDF, Excel, delimited text or CSV file.

Reading a report

Open **Daily Reports** and choose a report from the list on the left (on a tablet or phone, from the list at the top). The list is folded by group — open a group to see its reports, or type in *Find a report* and every matching group opens by itself. Point at a report and click its star to make it a **Favorite**; favorites sit at the top of the list, followed by your three most **Recent**reports. Favorites and recents are kept on that computer. The report opens straight away for today's business date. Change the date, date range or filters above it and it updates by itself — there is no Preview button to press.

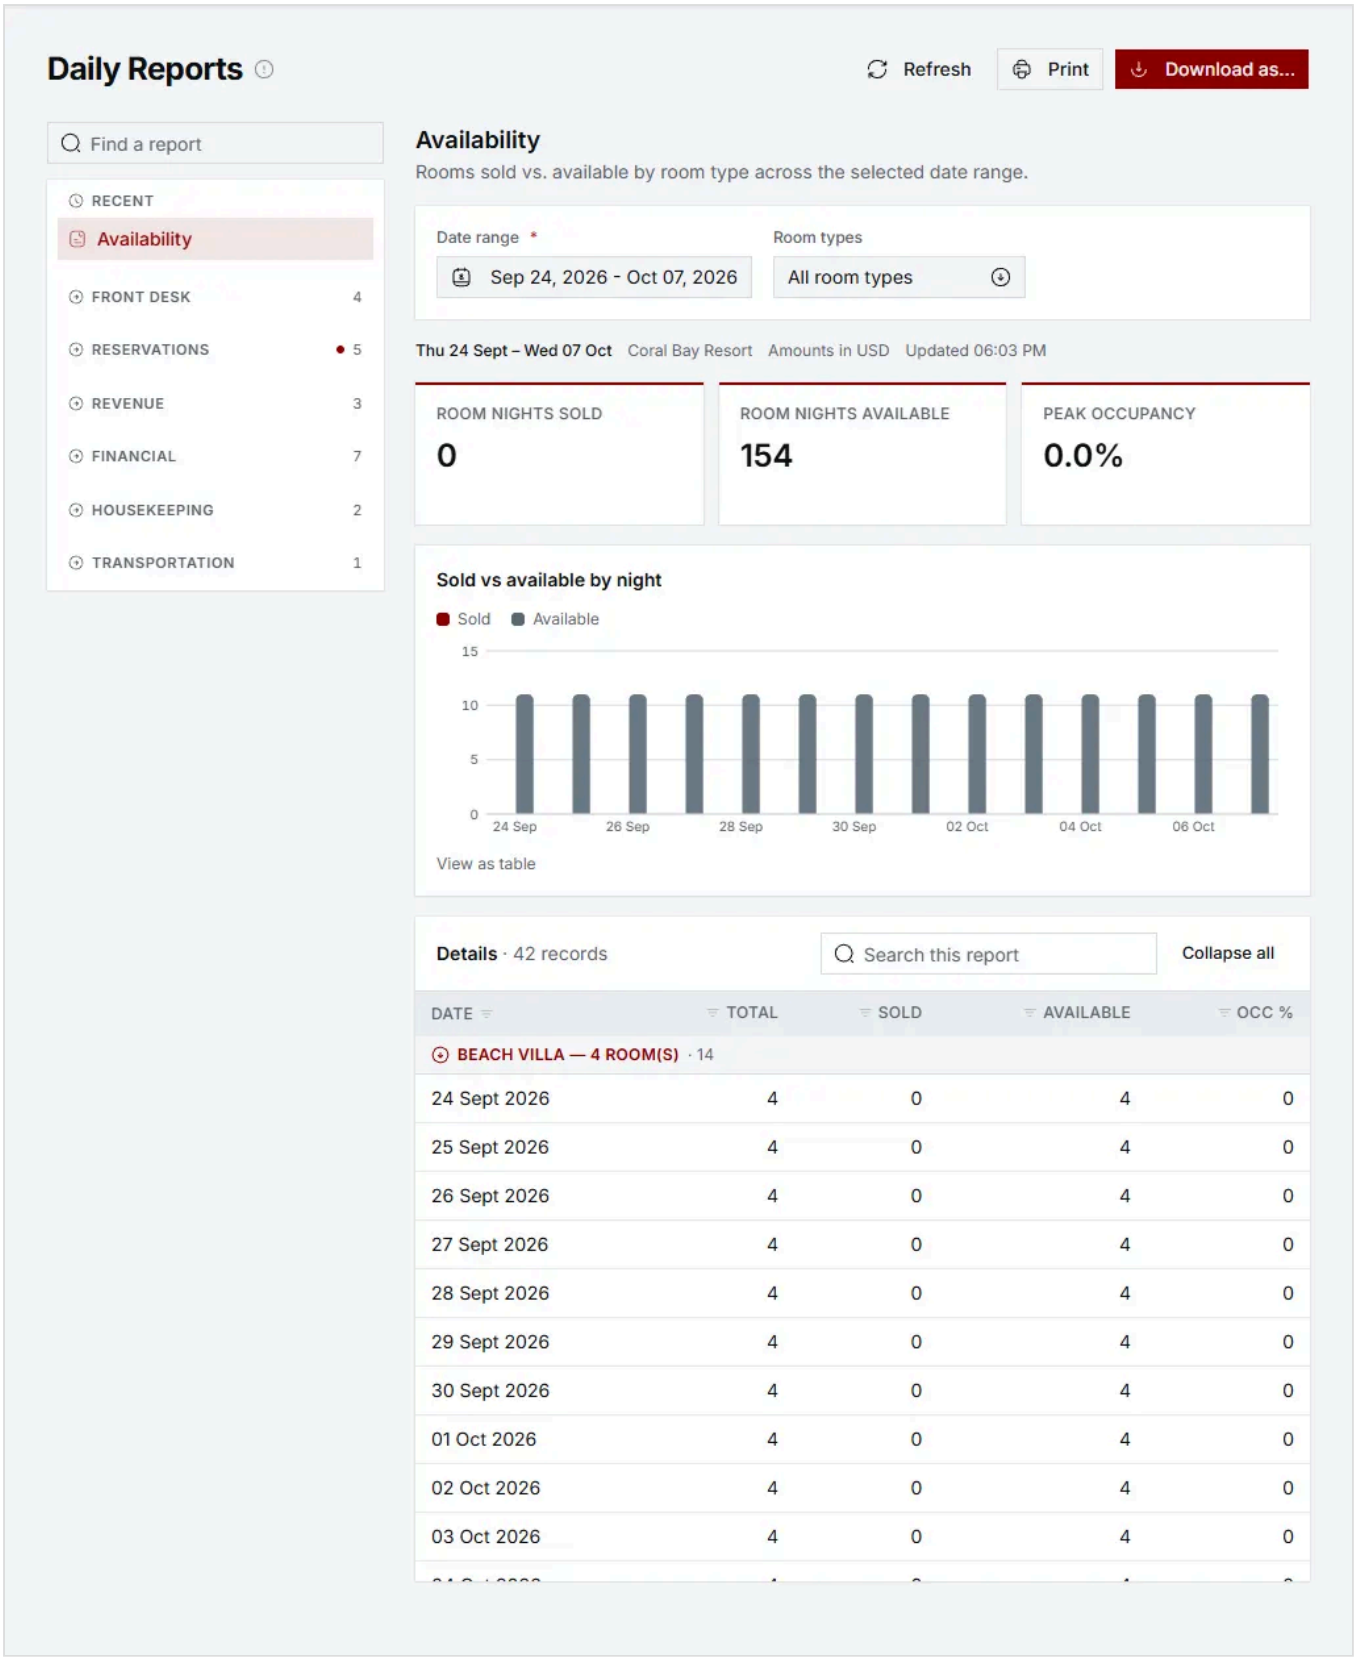

Key figures across the top give the answer at a glance — arrivals, balance due, room revenue, open traces and so on.

Charts show how the figures break down: by status, room type, outlet, day or travel agent. Choose *View as table* under a chart for the same numbers as text.

Details is the full list. Click a column heading to sort, type in the search box to narrow it, and use the arrow beside a group name to fold it away. Totals stay in view at the bottom.

Where a list shows a confirmation number, click it to open that reservation.

The address in your browser holds the report and its dates, so you can bookmark it or send the link to a colleague.

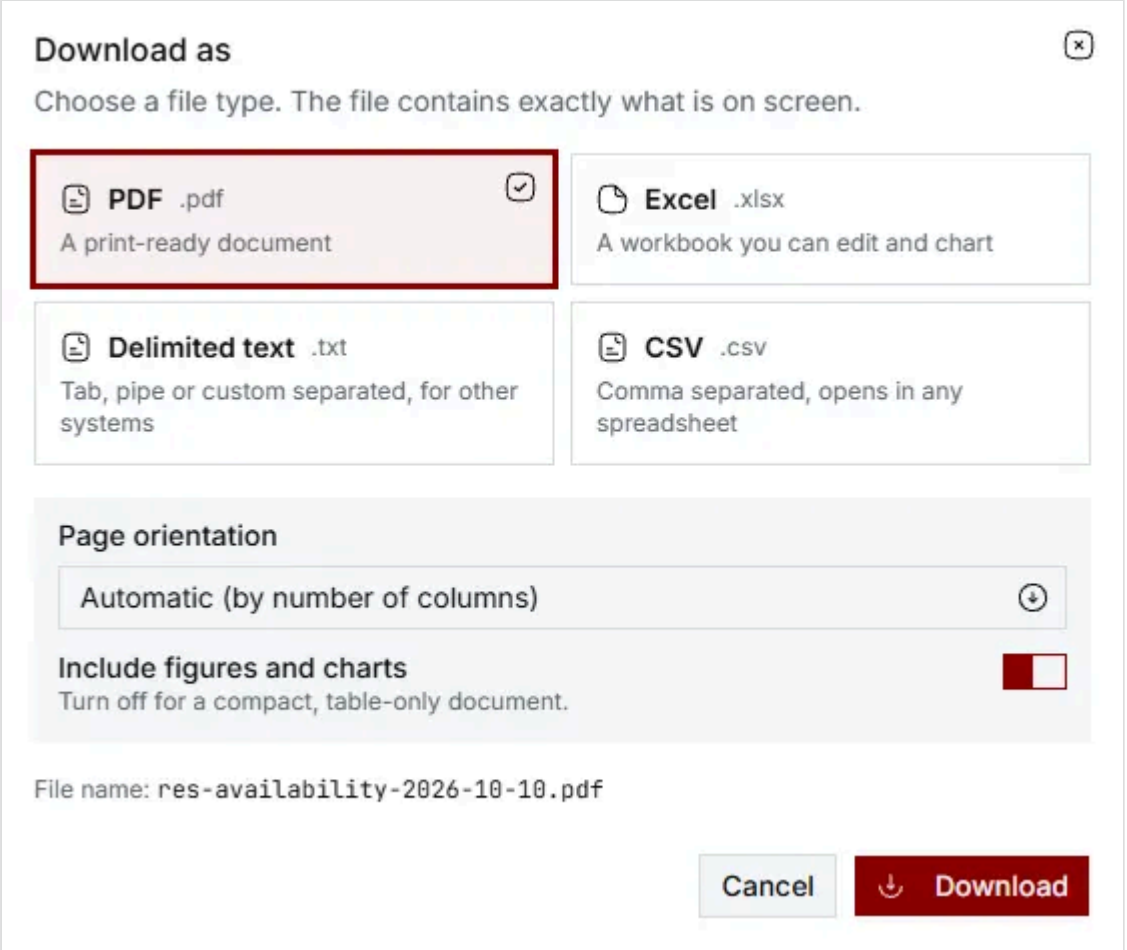

Downloading

Choose **Download as...** and pick a file type. The file holds exactly what is on screen. Your last choice is remembered on that computer.

File type	Best for	Choices
PDF	Printing and filing	Page orientation, and whether to include the key figures and charts.
Excel (.xlsx)	Working on the numbers	A Summary sheet with the key figures and the numbers behind each chart.
Delimited text (.txt)	Sending to another system	Delimiter (tab, pipe, semicolon, comma or one character of your own), text qualifier, encoding, line ending, header row.
CSV (.csv)	Opening in any spreadsheet	The same as delimited text, always comma separated.

> Text and CSV files are **data only** by default: one heading row, then one line per record, with plain numbers and dates written as year-month-day. That is what other systems expect. To get the older layout — title, group headings and subtotals — choose *As printed* under Layout.

Print opens the PDF in a new tab so you can print it. On a phone or tablet use **Download as…** from the bar at the bottom of the screen.

Every download is recorded in the **Activity log** under Daily Reports — who downloaded which report, in which file type and for which dates. Reading a report on screen is not recorded.

On a phone or tablet

Every report can be read on a phone: key figures, the first chart (more on request), and the list as cards that load fifteen at a time. Downloading works the same way.

Price calendar and stop sale

For revenue managers, reservations and front office: reading prices on the Revenue calendar, closing dates to sale, and booking a closed date when you have to.

The price calendar

Finance › Revenue › Calendar is the first tab of Revenue. It is for looking, not for typing: it shows one month for one room type and one rate plan, and opens on the Base Rate and the first room type. Use the rate plan drop-down and the room type buttons to look elsewhere.

Each day shows the nightly price. Hover a day to see the extra adult and extra child prices.

NA means that plan has no price of its own for that night. (At night audit such a night is charged at the Base Rate, but the calendar does not show another plan's price as if it were this plan's.)

A small blue dot marks a price worked out from a parent plan, for a derived rate plan.

Closed with a red mark means the room type is on stop sale that night.

A rate plan's own **Calendar** button (on the Rate plans tab) opens the same calendar fixed to that plan. It cannot be switched to another plan from there.

Changing prices from the calendar

1. Click a day, or click a first and a last day. The selected days are shaded.
2. In the bar above the calendar choose **Update prices**. Rate seasons opens with the rate plan, room type and dates already chosen.
3. Enter the daily price (and extra adult and child prices if they differ), check the room types, and choose **Push prices to calendar**.
4. You are taken back to the calendar, which now shows the new prices.

Rate seasons works in three steps, each opening only after the one before is saved: the rate plan, then the season and price, then the room types. Coming from the calendar, all three are already filled in and you can open any of them to change it. Derived rate plans

cannot be priced directly — change their parent plan instead. The calendar is not available for pricing on a phone; Rate seasons is a computer task.

Stop sale

A stop sale closes a date to **new** bookings. It can close one room type or the whole property, and it applies to every rate plan. Set it either from the calendar (select the days, then **Stop sale**) or on **Front Office › Availability**. Reopen the same way. Setting or lifting a stop sale needs access to update Availability.

Who is stopped	What happens
Your website (Booking API)	The night shows as closed and a booking for it is refused with STOP_SALE.
The channel manager	The room type is closed at the channel — not just shown as zero rooms. The change is sent straight away, not at the next scheduled update.
Staff creating or editing a booking	Warned and stopped, unless they have Availability update access and choose Override Restriction.
Bookings that already exist	Nothing changes. A guest already holding a closed night keeps it, and editing an unrelated detail never trips the stop sale.

Booking a closed date: Override Restriction and Overbook

When a booking touches a closed night, staff with Availability update access are asked whether to continue. There are two separate questions, and they are never merged:

Choice	What it ignores	Needs
Override Restriction	The stop sale. The room must still be free.	Availability update access
Overbook	Physical availability — sells a room type that has no free rooms.	As before

> **CLOSED AND FULL**

> If a night is both on stop sale and sold out, one message shows both warnings and you must accept both. Overriding only the restriction still leaves the booking blocked for lack of rooms, and the other way round. Every override is recorded in the activity log. Websites and channels can never override a stop sale — that is what it is for.

Group pickup still refuses a closed date without an override. If you need to pick up a group on a closed night, lift the stop sale first.
