Configuration guide

Your enterprise and first property have been provisioned. This guide takes you from there to a property that is ready for its first reservation.

Who does what

Who	Does
Uppsolut	Creates your enterprise and its first property, your licence (how many properties and rooms), the add-ons you bought (Spa, Excursions), the channel-manager connection, and your first administrator account. Approves properties you add later.
Your administrator	Signs in first, sets up the enterprise: staff accounts and roles, email, guest lists, Booking API keys. Usually also leads the property setup.
Your property team	Configures each property: its details, taxes, charge codes, outlets, rooms, rates, night audit and documents. Front office, finance and revenue each own their part.

Two areas: enterprise and property

All setup happens in the **Hub**, the setup and administration side of Uppsolut Stay. The Hub has two areas, and every setting lives in exactly one of them:

Enterprise: things shared by all your properties. People and roles, sessions, the email account, guest lists (a guest profile is shared by every property), Booking API keys and support access.

Property: everything else, one property at a time. A property's taxes, charge codes, rooms, rates and documents are its own, so two properties can work differently.

> **SEVERAL PROPERTIES?**
> Set up your first property completely, then use **Copy from…** on the property pages (room types, lists, meal plans, allocations, charge codes, outlets, tax profiles, payment methods, stationery, Spa and Excursions) to bring its setup into the next one. Copying only adds what is missing and never overwrites.

The order to work in

Some settings depend on others, for example rooms need room types and rates need charge codes. This order avoids going back:

1. **Sign in and set your password** (Before you begin).
2. **Enterprise:** add your staff and roles, set up email, fill the guest lists (Enterprise setup).
3. **Property, steps 1–9:** general details, tax and payments, charge codes, outlets, rooms, rates, numbering, night audit, stationery (Property setup).
4. **Add-ons and channels** if you have them: excursions, spa, online booking, channel manager.
5. **Go-live checklist**: confirm everything before the first real guest (Go-live checklist).

A small property with a clear rate structure can be set up in a day. Allow more time when you have many room types, rate plans or outlets. The Hub's **Overview** page tells you, at any point, what is still missing.

Before you begin →

First sign-in, your password, and the Hub.

Property setup →

What a new property already has, and the setup steps.

Before you begin

Signing in for the first time, setting your password, and finding your way around the Hub.

What Uppsolut sends you

When your enterprise is provisioned, your first administrator receives a welcome email with:

Item	What it is
Sign-in address	The address you sign in at, ending in /login.
Enterprise code	Your enterprise's short code, for example coralbay. Everyone in your enterprise uses the same code.
Email	Your account's email address.
Temporary password	Valid for your first sign-in only. You choose your own password straight away.

This first account is your **onboarding account**. It always has full access to every property, and it cannot be deleted or restricted, so your enterprise can never lock itself out. You can still change its name, email and password.

First sign-in

1. Open the sign-in address. Enter the **Enterprise code**, your **Email** and the temporary **Password**, then choose **Sign in**.
2. The **Set your password** screen opens. Enter a **New password** of at least 12 characters (not the temporary one), confirm it, and choose **Set password and continue**.
3. You are signed in and land on the property dashboard, the day-to-day side of Uppsolut Stay.

> **SIGNING IN PROBLEMS**

> Every failed sign-in shows the same message, whatever was wrong. After five failed attempts in 15 minutes the account is locked for 15 minutes. There is no "forgot password" link: a user who forgets their password asks an administrator to set a new one in **People**.

Opening the Hub

All configuration is in the Hub. From the dashboard, choose **Setup** at the top right of the header, or open the account menu at the bottom of the sidebar (your name) and choose **Hub**. Both are shown only to people who have setup permissions. To go back, choose **Operations**at the top right of the Hub, or open the account menu in the Hub's sidebar and choose **Open property dashboard**.

The Hub sidebar

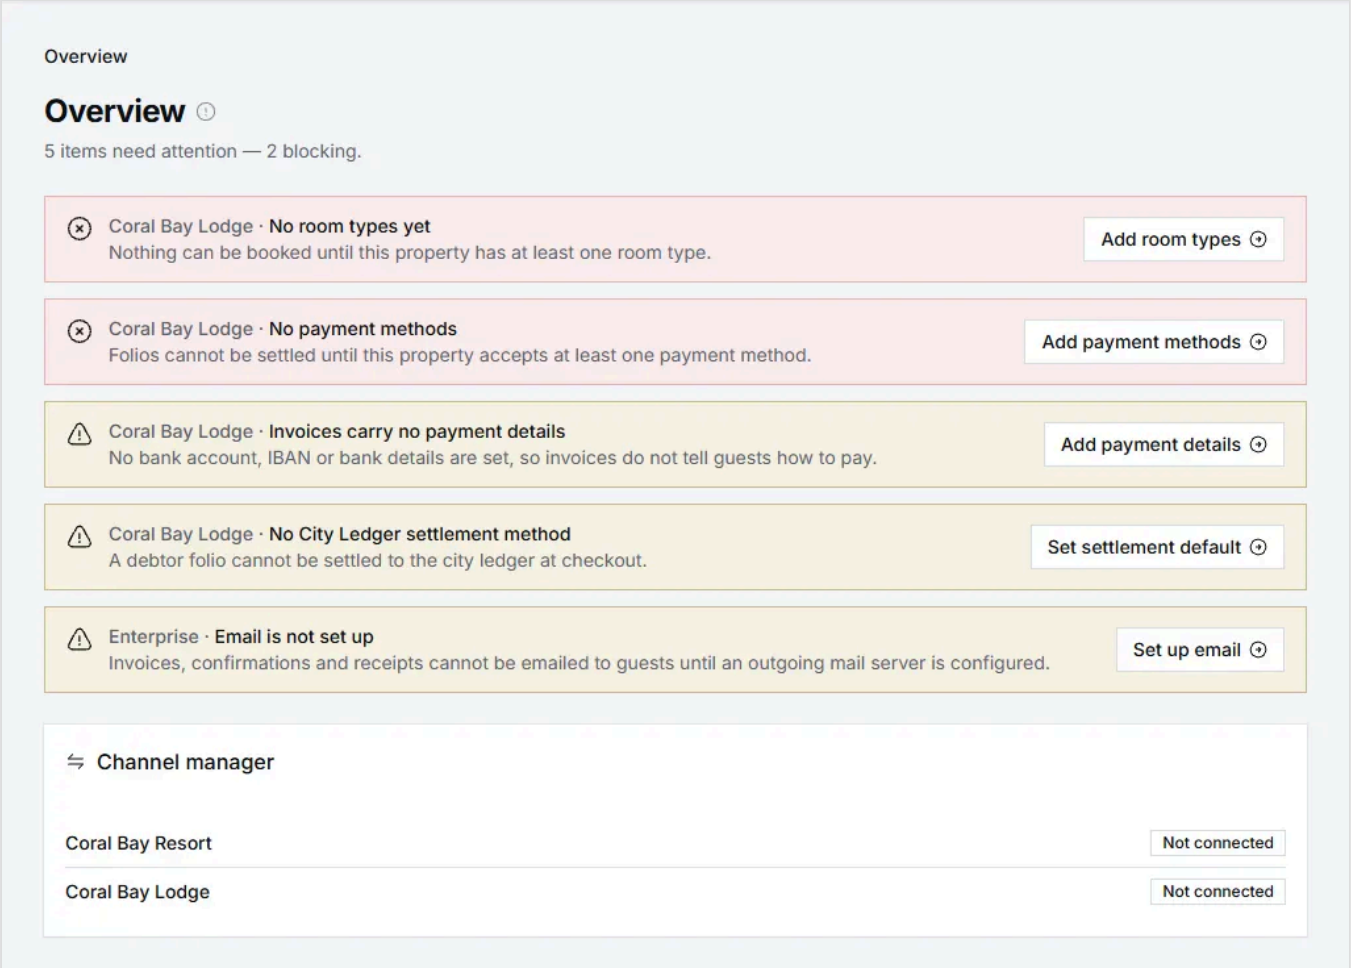

Group	What is in it
Overview	What still needs attention across the enterprise and every property.
Enterprise	Properties, People, Sessions, Email & SFTP, Booking API Keys, Support Access, Guest Lists.
Property	Controls (the property's setup pages) and Channel Manager. Controls opens into a list of the property's setup sections, so you can move from one section to the next without going back to the Controls page. A band at the top of every property page reads Configuring · property name, with a switcher to change property.

Longer setup pages, with three or more sections, show links under the page title that jump straight to each section.

You only see the menu items your roles allow. Staff who work at a single property never see the Enterprise group. They can still reach their own property's setup if their role includes Property Setup.

The Overview page

The Hub opens on **Overview**. It lists what is missing or wrong, most urgent first. Each item has a button that takes you to the page that fixes it. A new property shows several items. That is expected, and they go away as you work through this guide.

A newly provisioned property on the Overview. Red items block operations, amber items are warnings.

When everything is in place, the page says **Everything is set up — nothing needs attention**. Come back to it whenever you are unsure what is left.

Permissions you need

The built-in **Admin** role has everything. If you give setup work to others, the Hub pages need these permissions:

Permission	Opens
Property Setup	Every property page under Controls, and the enterprise Properties, Email & SFTP, Support Access and Guest Lists pages.
Users & Access	People and Sessions (enterprise-wide users only).
Integrations	Booking API Keys, Online Booking and Channel Manager.

Permission	Opens
Green Tax Registrations	The Green Tax register.
Revenue	Saving meal plans, rate plans, allocations and prices.
Night Audit (update)	Changing the business date.

Enterprise & properties

The enterprise area holds what every property shares. Start here: check your properties, then work down the enterprise pages.

What the enterprise area covers

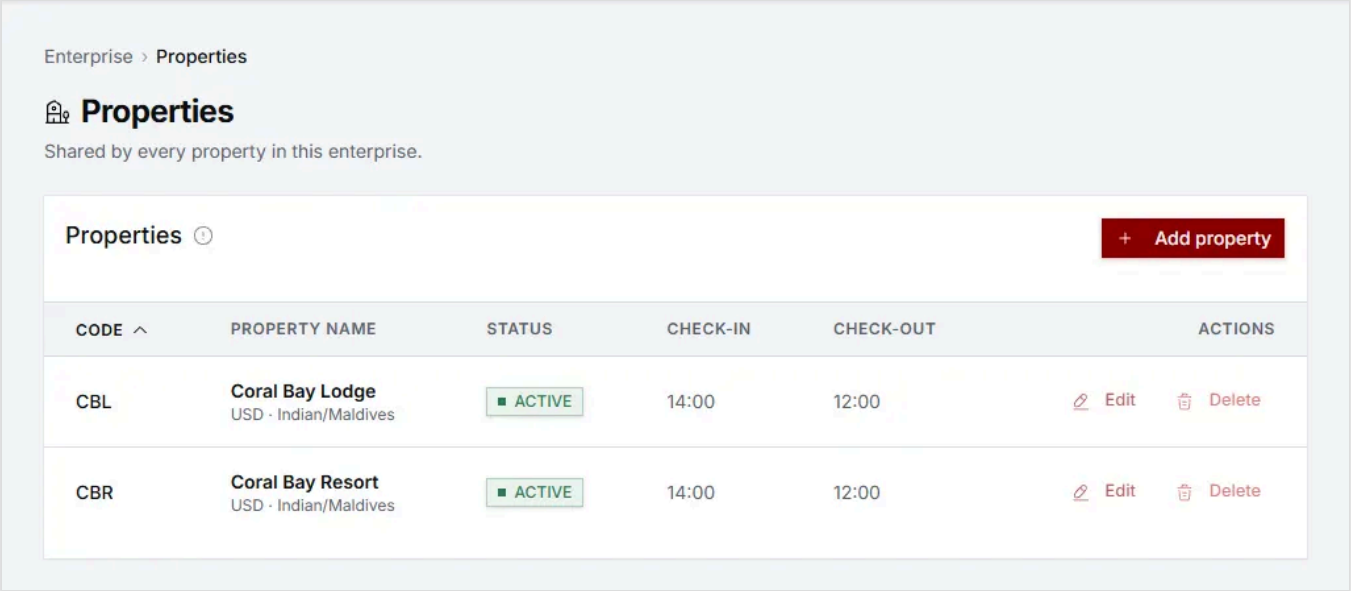

Page	What you set up	Guide
Properties	The properties in your enterprise, and adding new ones.	This page
People	Staff accounts, roles and permissions, and each person's work location.	People & roles
Sessions	Who is signed in, and signing someone out.	Sessions & support access
Email & SFTP	The mail account guest emails are sent from.	Email & SFTP
Booking API Keys	Keys for your own website to show availability and take bookings.	Booking API keys
Support Access	Approving Uppsolut support when they need to look at your data.	Sessions & support access
Announcements	Send a message to everyone, or to one property, in the notification bell.	Announcements
Guest Lists	Nationalities, titles, VIP levels and other guest-profile lists.	Guest lists

Only people with access to **All properties** see the enterprise area. Staff tied to a single property never do.

Properties

Where: Hub › Enterprise › Properties · **Who:** Property Setup permission

Your first property is already here, created by Uppsolut with the details you agreed at onboarding: name, short code, legal name, currency, time zone, check-in and check-out times, and the go-live date.

Column	Meaning
Code	The property's short code. It is unique across Uppsolut Stay and is the default prefix of its booking numbers.
Status	ACTIVE properties can be set up and used. PENDING means waiting for Uppsolut's approval. REJECTED shows the reason; fix it and choose Resubmit.
Check-in / Check-out	The property's standard times. They are edited on the property's General page.

Checking the property Uppsolut created

Before you configure anything, confirm these with Uppsolut. You cannot change them yourself:

Currency: every price and posting is in this currency.

Time zone: the scheduled night audit, business-day rollover and timestamps all follow it.

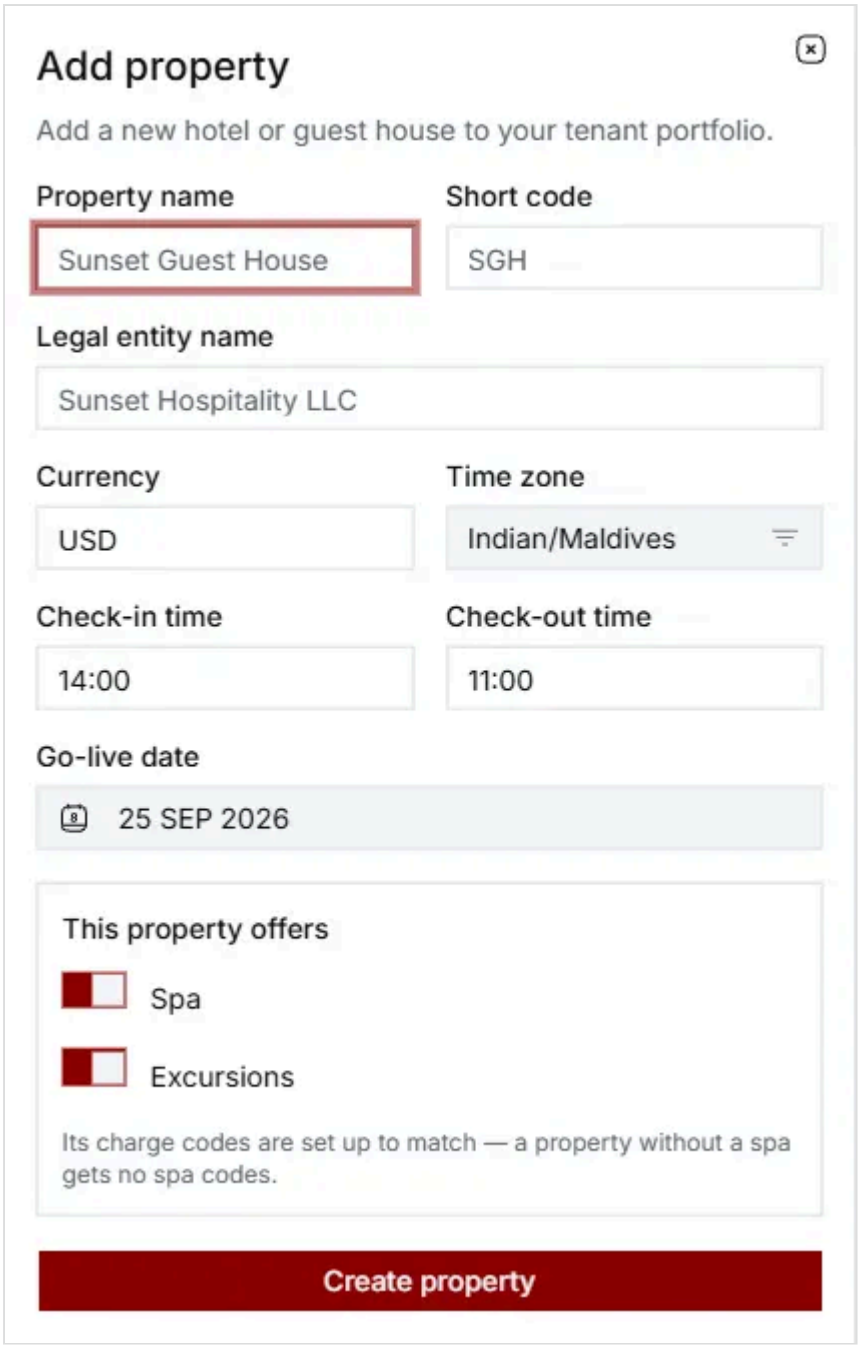

Both are fixed once a property is active.

Go-live date: this becomes the property's first business date. You can still move it on the Night Audit page until the property records its first activity.

Add-ons: Spa and Excursions appear in the property menu only if your enterprise has them.

Adding another property

Choose **Add property** and fill in the form:

Field	Notes
Property name	At least 2 characters.
Short code	2–5 characters, unique across Uppsolut Stay. Choose it carefully: it prefixes booking numbers.
Legal entity name	The company name printed on invoices.
Currency	3 letters, e.g. USD. Every price and posting at the property is in it.
Time zone	Where the property is, e.g. Indian/Maldives. Night audit and the business day follow it.

Field	Notes
Check-in / check-out time	HH:MM, 24-hour. Defaults 14:00 and 11:00.
Go-live date	The property's first business date.
This property offers: Spa / Excursions	Only if your enterprise has these add-ons. A property without a spa gets no spa charge codes.

Choose **Create property**. The new property is **PENDING**until Uppsolut approves it, and it can't be configured until then. While it is pending you can still edit it, including its currency and time zone; once it is active, those two are fixed.

> **PROPERTY LIMIT**
> Your licence limits how many properties you can have. If the form says the limit is reached, contact Uppsolut.

Once approved, pick the property from the switcher on any property page and follow the property setup, or copy the setup from a property you have already configured.

People & roles

Give every member of staff their own account, decide what they can do with roles, and where they work with their access.

Where: Hub › Enterprise › People · **Who:** Users & Access permission, all-properties users only

How access works

Three things decide what a person can do:

Setting	Decides
Roles	What they can do: which modules they can view, create, update or delete in. A person can hold several roles; their access is the combination of all of them.
Access	Where they can do it: All Properties (enterprise-wide), or a Single Property, their work location. There is nothing in between.
Job function	Their post at the property. It does not grant anything, but Housekeeping and Maintenance decide who appears in the room-assignment and work-order pickers.

Plan roles around jobs, not people. Create roles first, then add people and tick the roles they need.

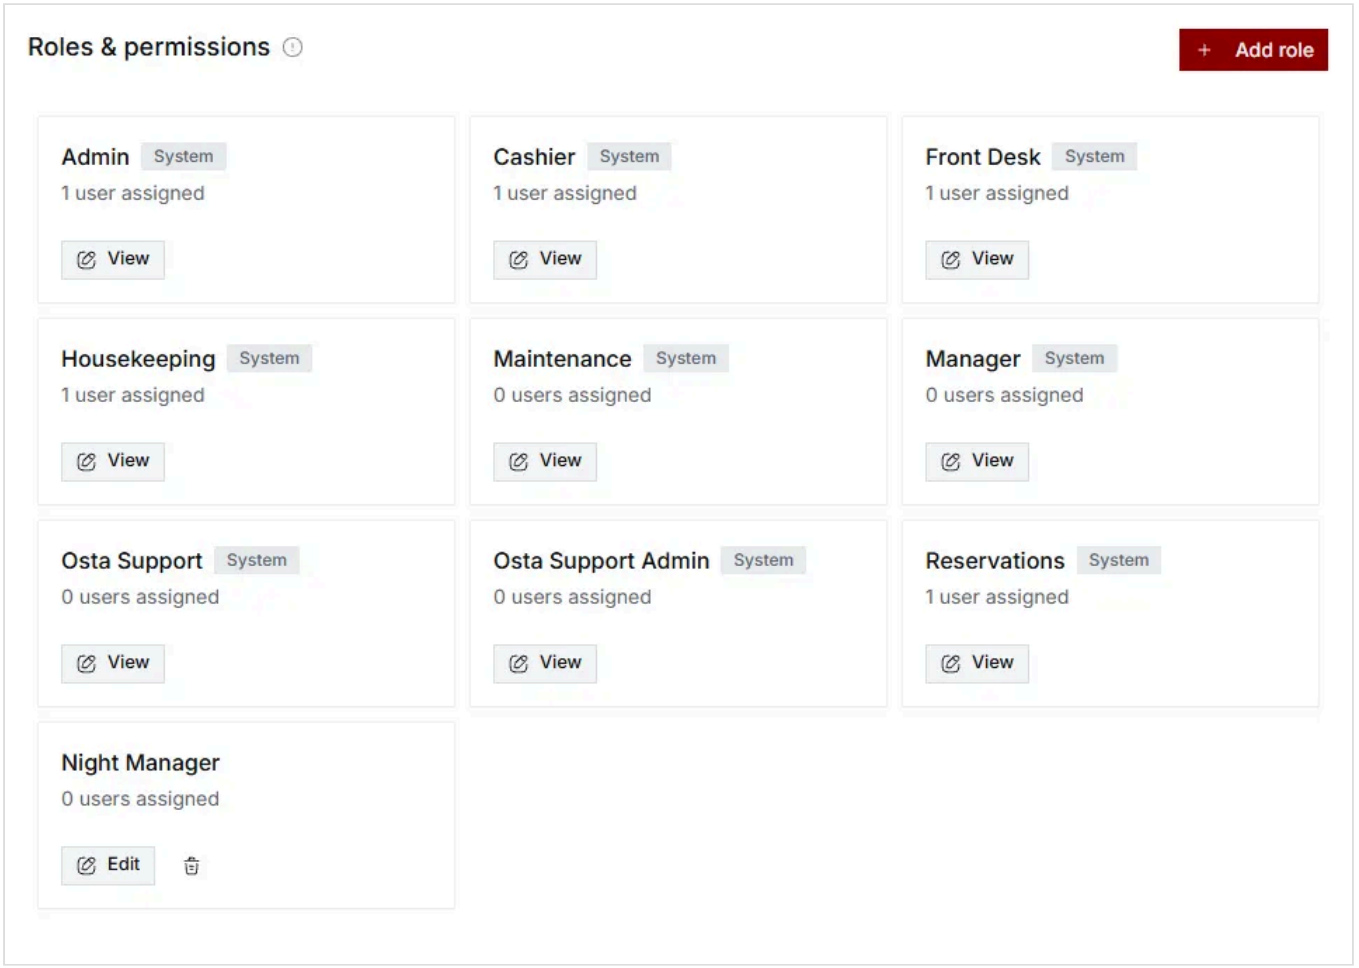

Roles

The **Roles & permissions** card lists every role and how many people hold it. Seven built-in roles are ready to use and cannot be changed:

Built-in role	Can do
Admin, Manager	Everything, including setup and user management.
Front Desk	Front office, reservations, group blocks, tape chart, availability, profiles, housekeeping, maintenance, cashiering, Fast Post, night audit, excursions and spa: create and update, but not delete.
Reservations	Reservations, tape chart and availability; group blocks and profiles without delete; front desk view.

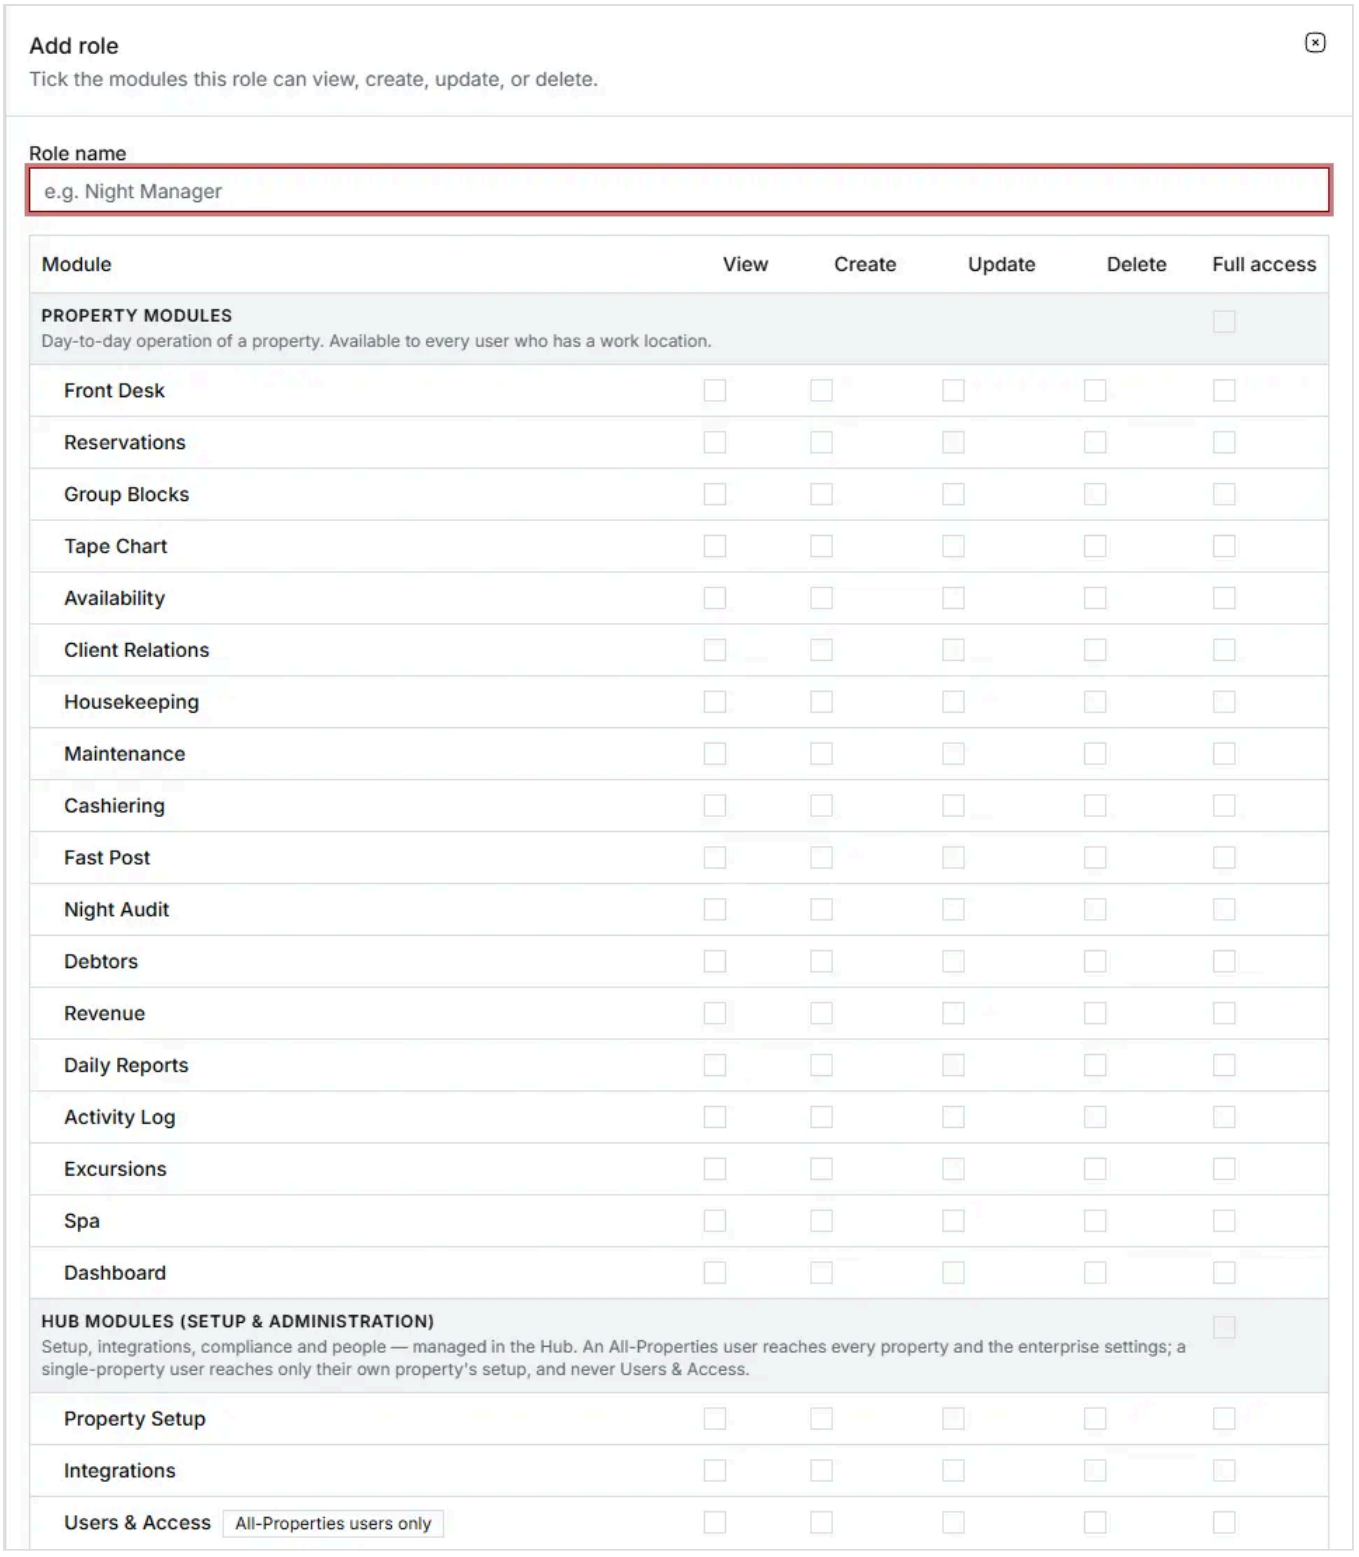

Built-in role	Can do
Cashier	Cashiering; Fast Post, debtors and profiles without delete; front desk view.
Housekeeping	Housekeeping; maintenance view.
Maintenance	Maintenance; housekeeping view.

None of the operational roles can open the Hub. Give setup work only to people who need it.

Creating a role

Choose **Add role**, give it a **Role name** (unique in your enterprise), and tick what it may do in each module:

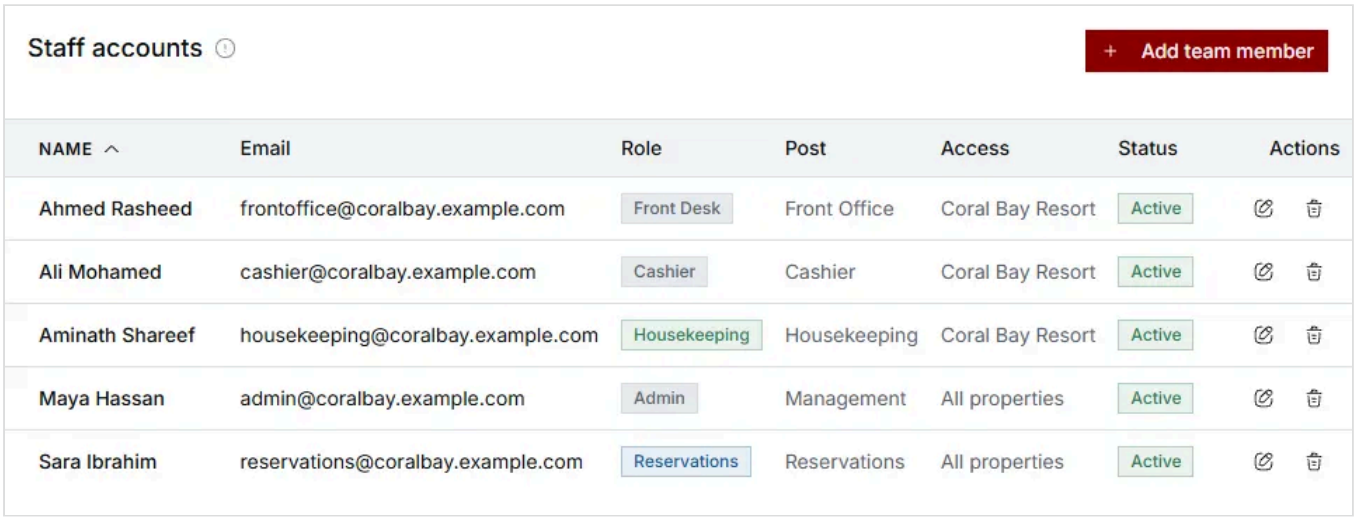

Property modules are day-to-day work: Front Desk, Reservations, Cashiering, Night Audit, Revenue, Daily Reports, Excursions, Spa, Dashboard and the rest.

Hub modules are setup and administration: **Property Setup** (every Controls page), **Integrations** (Booking API, online booking, channel manager), **Users & Access** and **Green Tax Registrations**. Users & Access only works for all-properties users. A single-property user with Property Setup can configure their own property only.

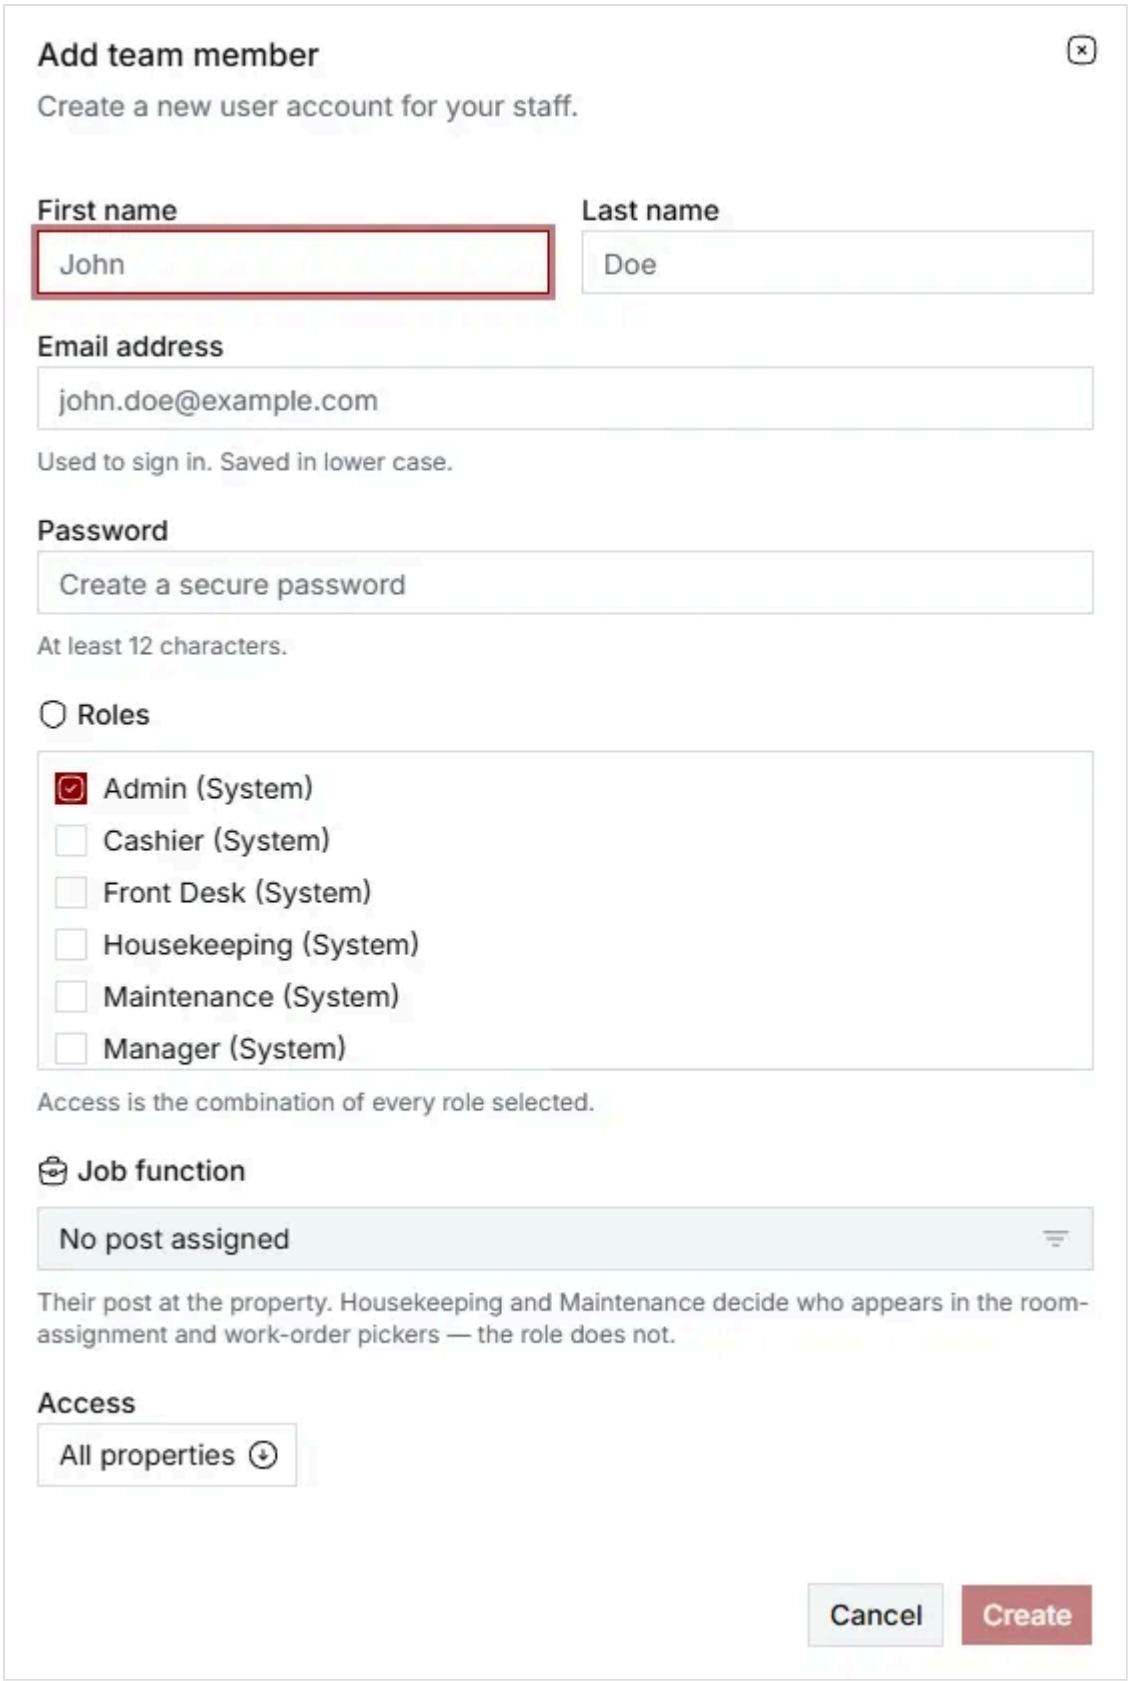

Ticking **Dashboard** view shows a **Dashboard widgets** panel to choose which cards the role sees. It hides cards; it does not restrict data.

Choose **Create** (or **Save** when you edit a role). Deleting a role asks you to confirm first, and a role that people still hold cannot be deleted. To print who can do what, choose **Permission matrix report** at the top of the page: an A4 matrix of every role, plus the people who hold each.

Staff accounts

Choose **Add team member**, fill in the form and choose **Create**:

Field	Notes
First name, Last name	Both required.

Field	Notes
Email address	The person signs in with it. It must be unique across Uppsolut Stay, and is saved in lower case.
Password	At least 12 characters. Give it to the person privately. When editing, leave it blank to keep the current one.
Roles	At least one.
Job function	Optional: Management, Front Office, Reservations, Cashier, Housekeeping, Maintenance, Food & Beverage, Spa.
Access	All properties, or Single property with a Work location.
Active	When editing. Switch off to stop the person signing in; their sessions end at once. The onboarding account is always active.

> **GOOD PRACTICE**
> One account per person. Never share an account: the activity log records who did what.

When someone leaves

Edit their account and switch **Active**off. They are signed out at once and can't sign in again, and everything they did stays in the history. An account that has never been used can be deleted (you are asked to confirm); one with history (for example a cashier shift) can only be deactivated.

To reset a forgotten password, edit the person and type a new password.

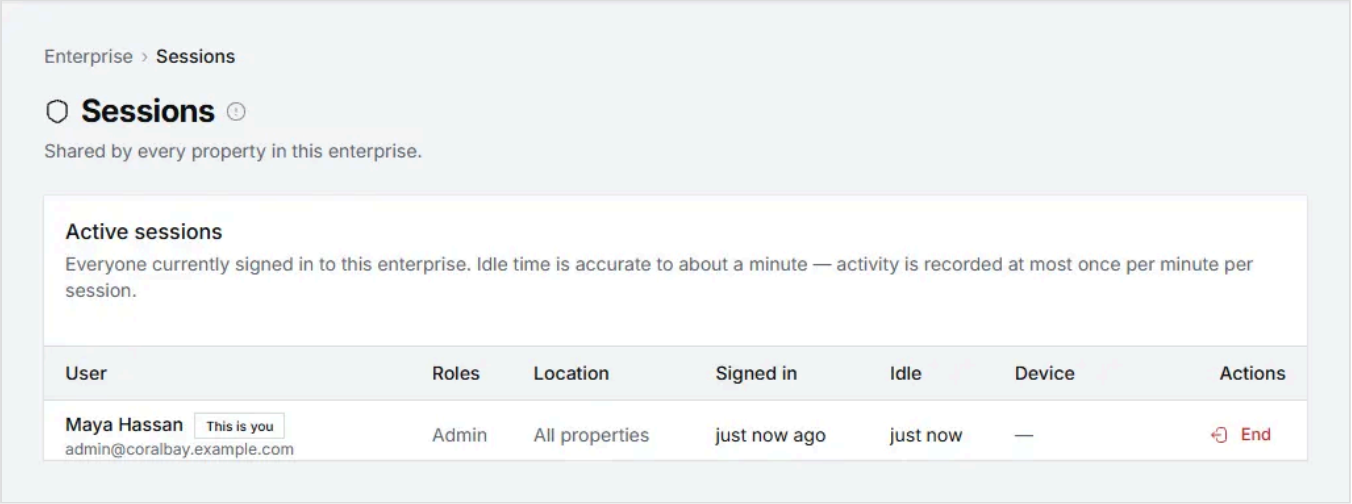

Sessions & support access

See who is signed in, sign someone out, set idle timeouts, and decide when Uppsolut support may look at your data.

Sessions

Where: Hub › Enterprise › Sessions · **Who:** Users & Access (view to see, update to end sessions)

Active sessions lists everyone signed in right now: their roles, where they are working, when they signed in, how long they have been idle, and their browser and IP address. It refreshes every 30 seconds.

Choose **End** on a row and confirm to sign that person out immediately, for example on a shared computer left signed in, or when someone leaves. They can sign in again straight away unless you have also changed their password.

A session also ends when…	
The person signs out	
It has been idle longer than the property's idle timeout	Set per property, see below.
End of Day rolls the business date	Staff at that property sign in again for the new day.
It is 24 hours old	Whatever else happens.

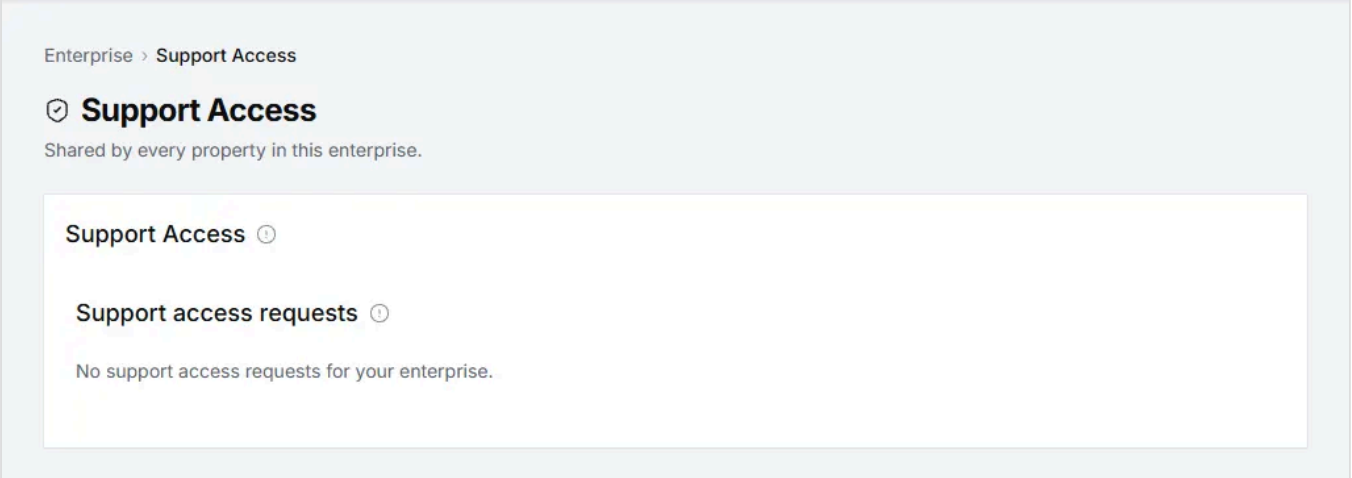

Idle timeout

The idle timeout is set **per property**, on Property › General › Idle sign-out: Off, 15 minutes, 30 minutes, 1 hour, 4 hours, or a custom number of minutes (at least 5). Front desks with shared computers should use 15 or 30 minutes.

Support access

Where: Hub › Enterprise › Support Access · **Who:** Property Setup (update to approve)

Uppsolut support staff cannot see your data by default. When they need to, for example to investigate a problem you reported, they send a request with a reason. It appears here as **PENDING**.

Approve gives support access for 24 hours. It then expires on its own.

Deny refuses the request.

Revoke ends an approval early, for example when the issue is fixed.

> Approve only requests you expect, with a reason that matches a conversation you had with Uppsolut. Everything support does while approved is recorded in the activity log.

Being told when support is in

Each time Uppsolut support opens a session in your enterprise, everyone who manages users receives a notification in the bell, **Osta support opened a session**, marked urgent.

It cannot be switched off in the bell, so an approved session is never silent. Anyone who sees one they do not expect can open **Support Access** and choose **Revoke**. See Notifications.

Email & SFTP

Connect the mail account that confirmation letters, eRegistration links and statements are sent from.

Where: Hub › Enterprise › Email & SFTP · **Who:** Property Setup (update to save and test)

What it is used for

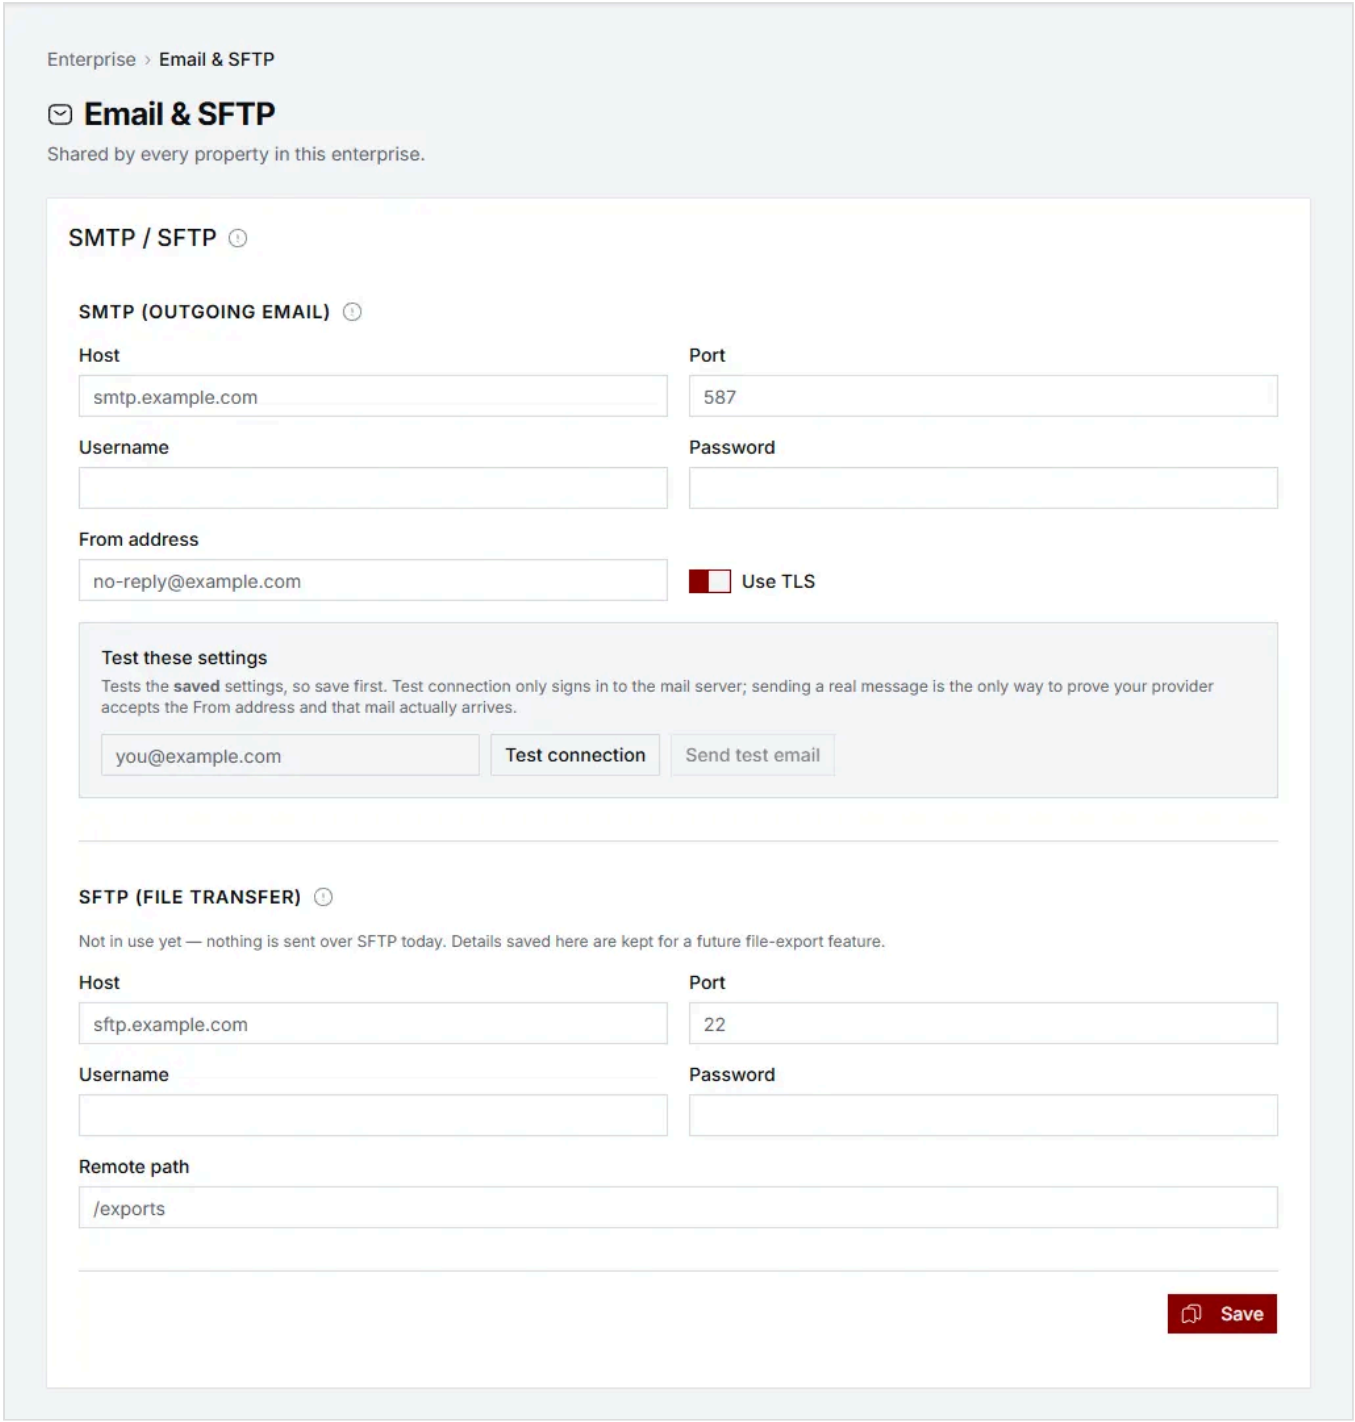

One outgoing mail account is shared by every property. Uppsolut Stay uses it to email guests and companies:

- reservation confirmation letters,
- eRegistration links (guests fill in their registration before arrival),
- invoices, receipts and debtor statements.

Until it is set up, the Hub Overview shows **Email is not set up**. If your agreement includes the Uppsolut Mail Service, mail goes out through Uppsolut instead. As soon as you enter your own account, yours is used.

Setting up outgoing email (SMTP)

Get these details from whoever runs your email: your IT provider, or your mail host's help pages.

Field	What to enter
Host	The mail server, e.g. smtp.example.com.
Port	Usually 587 (with TLS). Some providers use 465.
Username / Password	The mailbox login. A saved password shows masked, and leaving it untouched keeps it.
From address	The sender guests see, e.g. reservations@your-hotel.example.com. Use an address your mail server is allowed to send as.

Field	What to enter
Use TLS	Leave on unless your provider says otherwise.

1. Fill in the fields and choose **Save** at the bottom of the card. **Saved** appears beside it.
2. In **Test these settings**, choose **Test connection**. This checks the server accepts your login.
3. Enter your own address in the test box and choose **Send test email**. Check that it arrives, and is not in spam. This is the only real proof that guests will receive your mail.

> **ALWAYS TEST AFTER SAVING**
>
> The test uses the *saved* settings. After any change, save first, then test.

SFTP (file transfer)

The SFTP section is for sending exports to your own server. It is not in use yet, so you can leave it empty.

Announcements

Send a message to everyone in the enterprise, or to one property. It arrives in each person's notification bell, and on their phone if they have turned that on.

Where: Hub › Enterprise › Announcements · **Who:** Property Setup (update to send)

Sending one

1. Choose **Who is it for**: **Everyone, all properties**, or one property.
2. Write a short **Title** (up to 80 characters). This is what people see first.
3. Optionally add a **Message** (up to 500 characters).
4. Choose **Send announcement**. A message at the top tells you how many people it reached.

You are not sent your own announcement. Only active people receive it. Choosing a property reaches the people who work at that property and the people who work across the whole enterprise.

What people see

A new item in the bell, with the title and message, and a red count until they open it.

A notification on their phone or computer if they installed the app and turned phone notifications on.

Announcements **cannot be switched off** in the bell, so an important notice is never silently missed. People can still choose whether it also goes to their phone.

Who has read it

Under **Sent** you see the latest announcements, who they were for, when they were sent, and **read by** a number out of the number of people who received it.

Column	Meaning
Who it was for	Everyone, or the property's name.

Column	Meaning
Read by 4 of 12	Four of the twelve people it reached have opened it in the bell.

KEEP IT SAFE TO READ ON A LOCK SCREEN

Announcements can appear on a phone's lock screen. Do not put guest names, room numbers with names, amounts or passwords in them.

GOOD TO KNOW

- An announcement cannot be edited or recalled once sent. Send a follow-up instead.
- Sending the same message twice within a minute only sends it once.
- Each announcement is recorded in the Activity Log.
- Uppsolut support cannot send announcements from a support session.

Guest lists

The drop-down lists on a guest profile: nationalities, titles, ID types, VIP levels and more. Shared by every property, because a guest profile is.

Where: Hub › Enterprise › Guest Lists · **Who:** Property Setup (create and update to edit)

Nationalities

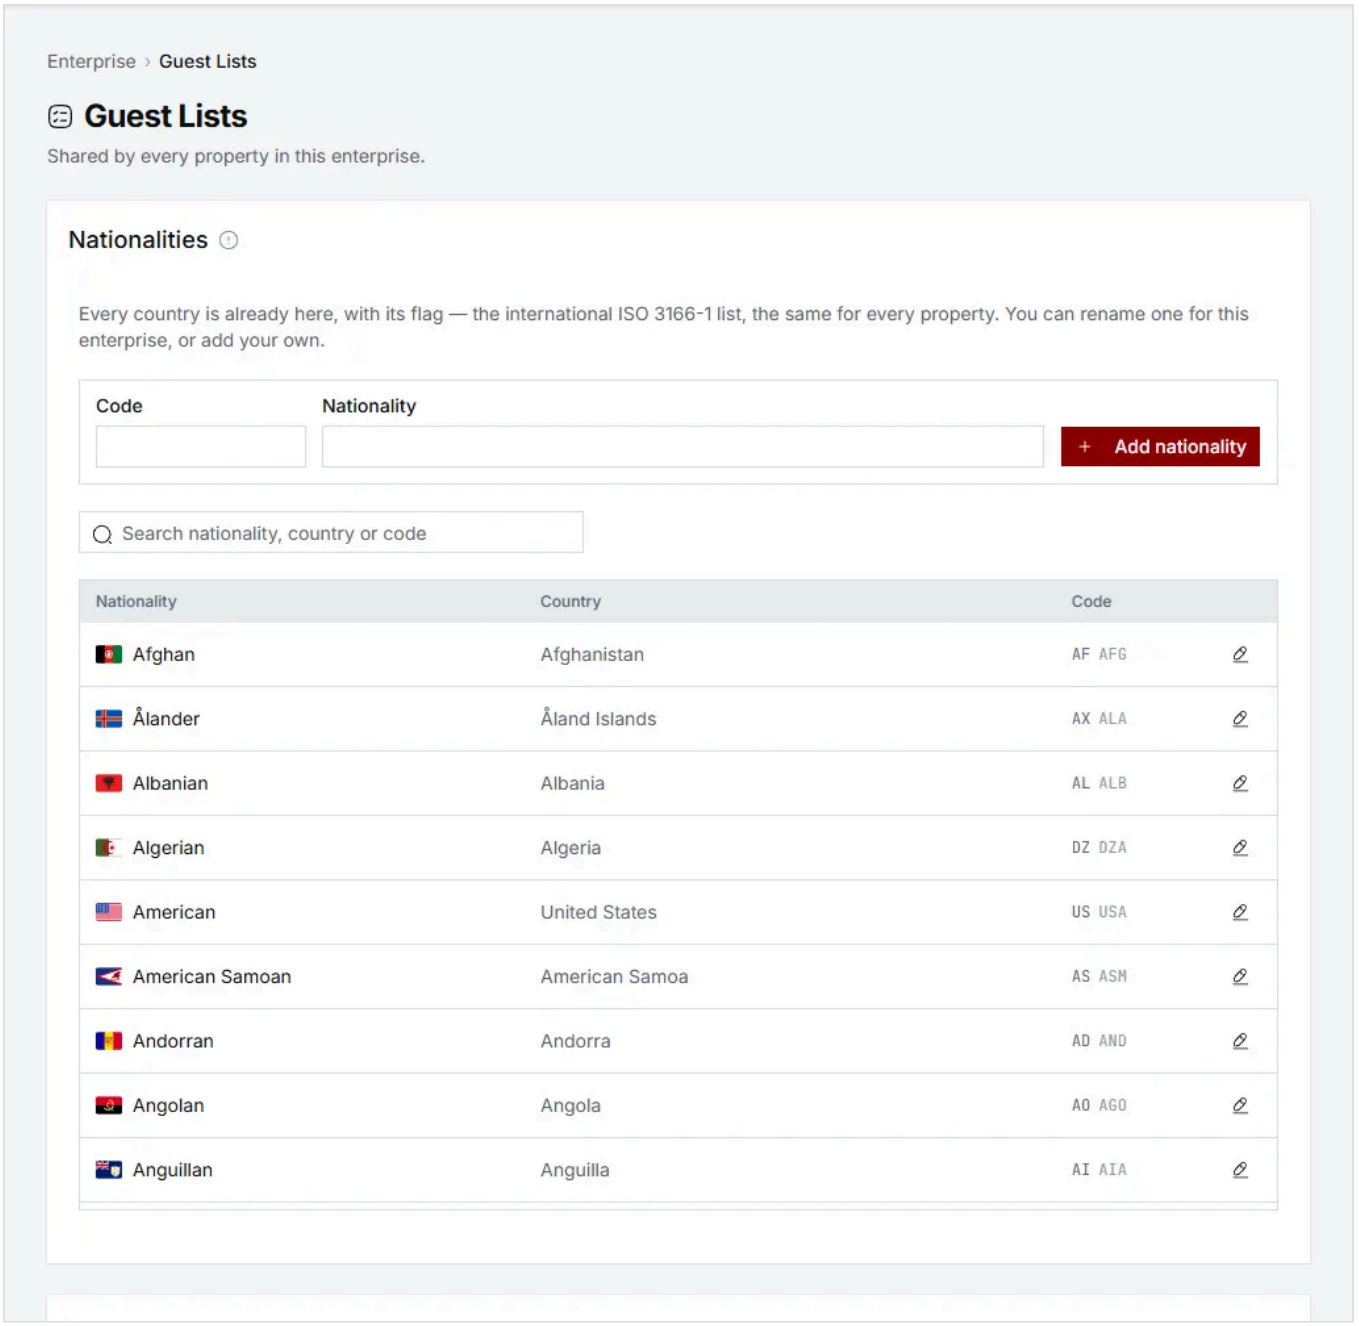

Already complete: every country, with its flag. It feeds nationality, address country and document-issuing country everywhere. There is nothing to set up, but you can:

Rename an entry to the wording your guests or authorities expect. The reset icon restores the standard name.

Add your own entry with a 2–3 letter **Code** that is not already a country code and a **Nationality** label, then choose **Add nationality**. Only entries you added can be removed.

Guest profile lists

> **THESE START EMPTY**
> A new enterprise has no titles, genders, ID types or VIP levels. The matching drop-downs on guest profiles stay empty until you fill these lists, so do it before your front office starts creating profiles.

Tab	Typical entries
Gender	Male, Female.
Title	Mr, Mrs, Ms, Dr.
ID / document type	Passport, National ID card, Driving licence.
Profile classification	Regular, Repeat guest, Corporate.
VIP level	Silver, Gold, Platinum.
Dietary requirements	Vegetarian, Vegan, Gluten-free, Halal.

Tab	Typical entries
Preferences	Quiet room, High floor, Extra pillows.

For each entry, type a **Code (internal)** and a **Display value**, then **Add**:

The **code** is stored on profiles and can never be changed, so keep it short and stable, e.g. `GOLD`. It is uppercased for you.

The **display value** is what staff see. Edit it any time with the pencil.

The **arrows** set the order the drop-down shows everywhere.

Delete (you are asked to confirm) hides an entry from new choices; profiles that already use it keep it. **Show deleted** lists deleted entries so you can **Restore** one, and adding a deleted code again restores it.

Reservation lists (special requests, transport types, housekeeping requests) and room-feature lists belong to each property. They are covered in Reservations and Rooms & inventory.

Booking API keys

Let your own website show live availability and take bookings. You create a key here; each property decides what its website sells.

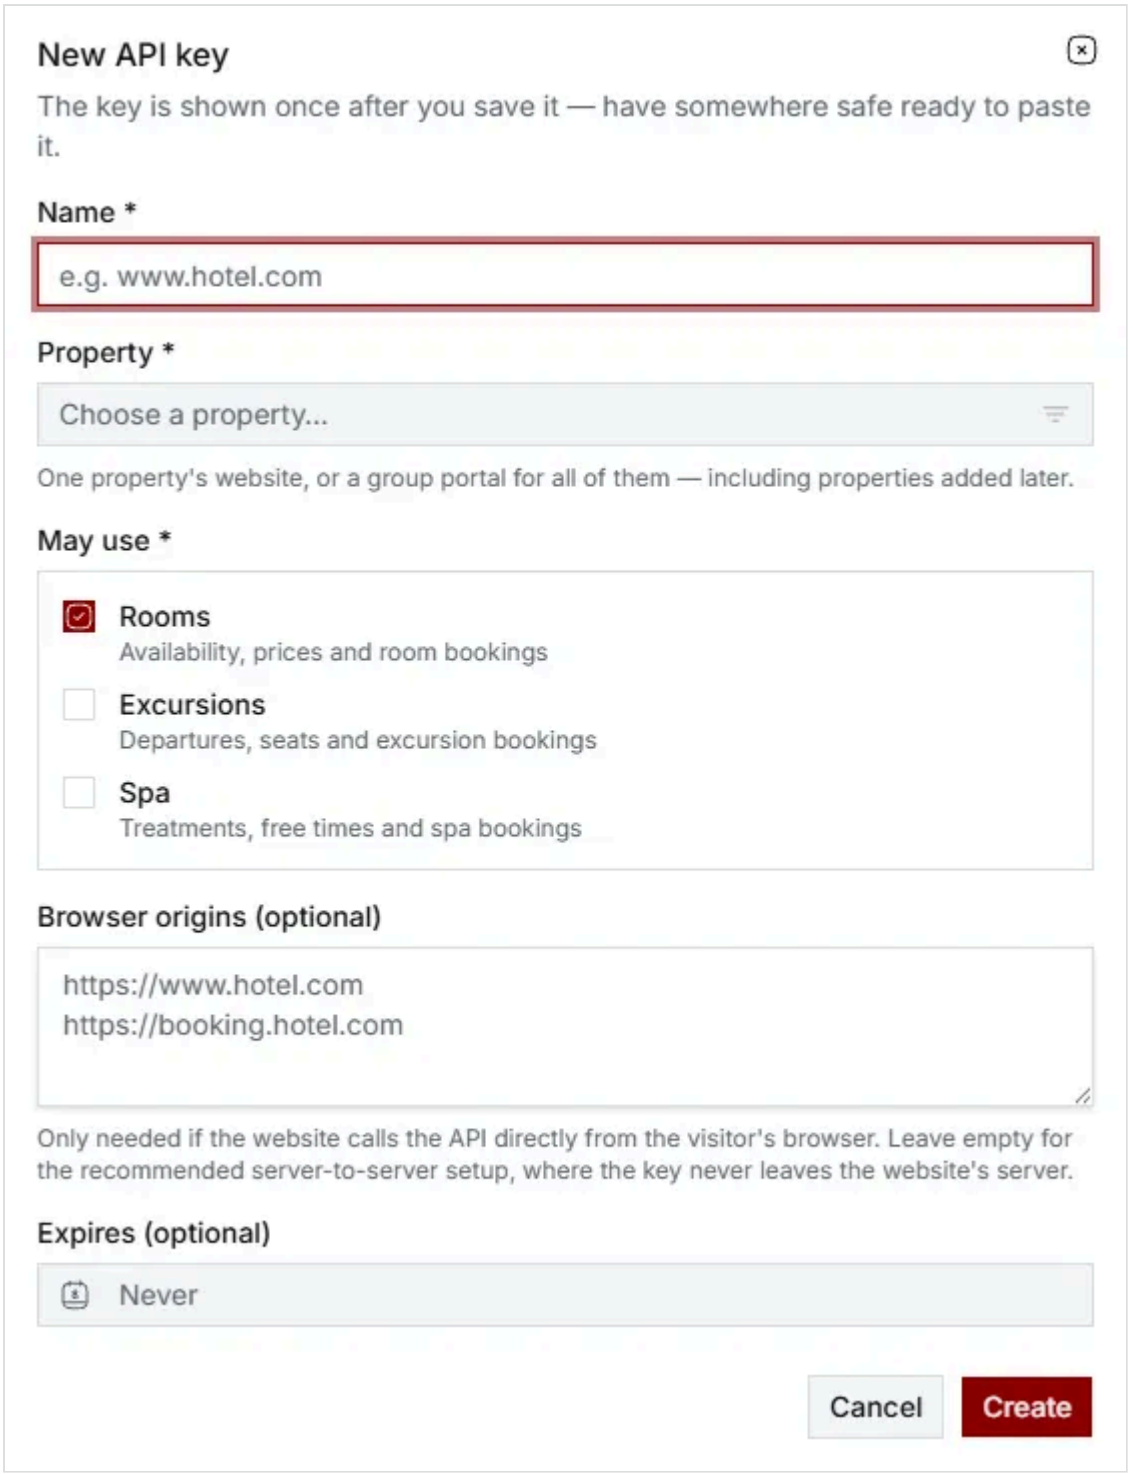

Where: Hub › Enterprise › Booking API Keys · **Who:** Integrations (create, update and delete for keys)

A key is what your web developer's site uses to talk to Uppsolut Stay. It is a password for a website, not a person. The developer's side is described in the Booking API guide.

---

1. Create a key

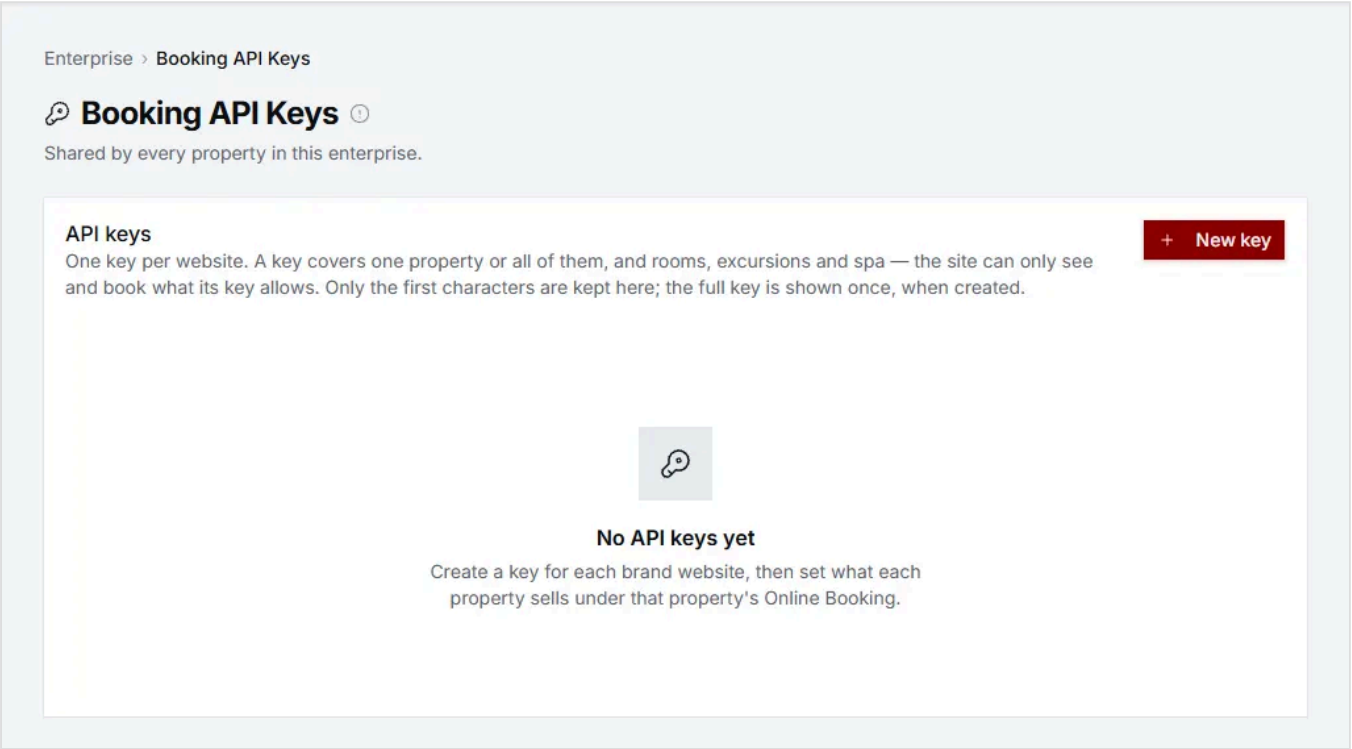

Choose **New key**:

Setting	What to enter
Name	Usually the website's address, e.g. www.example.com.
Property	One property, or All properties for a group website. All properties also covers properties you add later.
May use	Rooms, Excursions, Spa: what this website sells. Add-ons your enterprise doesn't have are greyed out. Transportation is for your own or an operator's system, not a website: it can't be ticked on a key with browser origins.

Setting	What to enter
Browser origins	Leave empty (recommended). Only for a static site that calls Uppsolut Stay from the visitor's browser. Such a key can show excursions and spa, but not book them.
Expires	Optional. Good practice for a key given to an outside agency.

Choose **Create**. **The key is shown once.** Copy it before choosing **I have saved it**, and send it to the developer through a password manager, never by email or chat.

2. Decide what each property sells

A key alone sells nothing. On each property's **Online Booking** page, switch online booking on and choose the rate plan, meal plan, excursions and treatments the website offers. See Online booking.

3. Webhooks (optional)

If the developer wants to be told when the property changes a booking (a trip cancelled for weather, a guest moved, a no-show), open the key's **Webhooks** (bell icon), add the URL they give you, and tick the events to send:

Event	Sent when
Booking confirmed	A booking is confirmed.
Booking cancelled	The property cancels a booking.
Moved to another departure	An excursion booking moves to a different departure.
Treatment completed	A spa treatment is marked complete.
No-show	A booking is marked no-show.

Pass the developer the **signing secret**, which is also shown once. **Send test** checks the address works. **Log** shows every delivery and the answer that came back.

4. Hand over to the developer

The key, and the webhook secret if any, through a password manager.

The address your staff sign in at: the API lives at the same address.

A link to the Booking API guide.

Looking after keys

Action	Effect
Edit	Change the name, properties, modules, origins or expiry. The key itself stays the same.
Rotate	Issues a new key; the old one stops working at once. Use it if a key may have leaked, then give the developer the new one.
Revoke	Ends the key permanently. Bookings already made are unaffected.

> Every key, setting and webhook change is recorded in the activity log with who made it. Each property's **Online Booking › Online bookings** tab lists everything the website booked, or tried to.

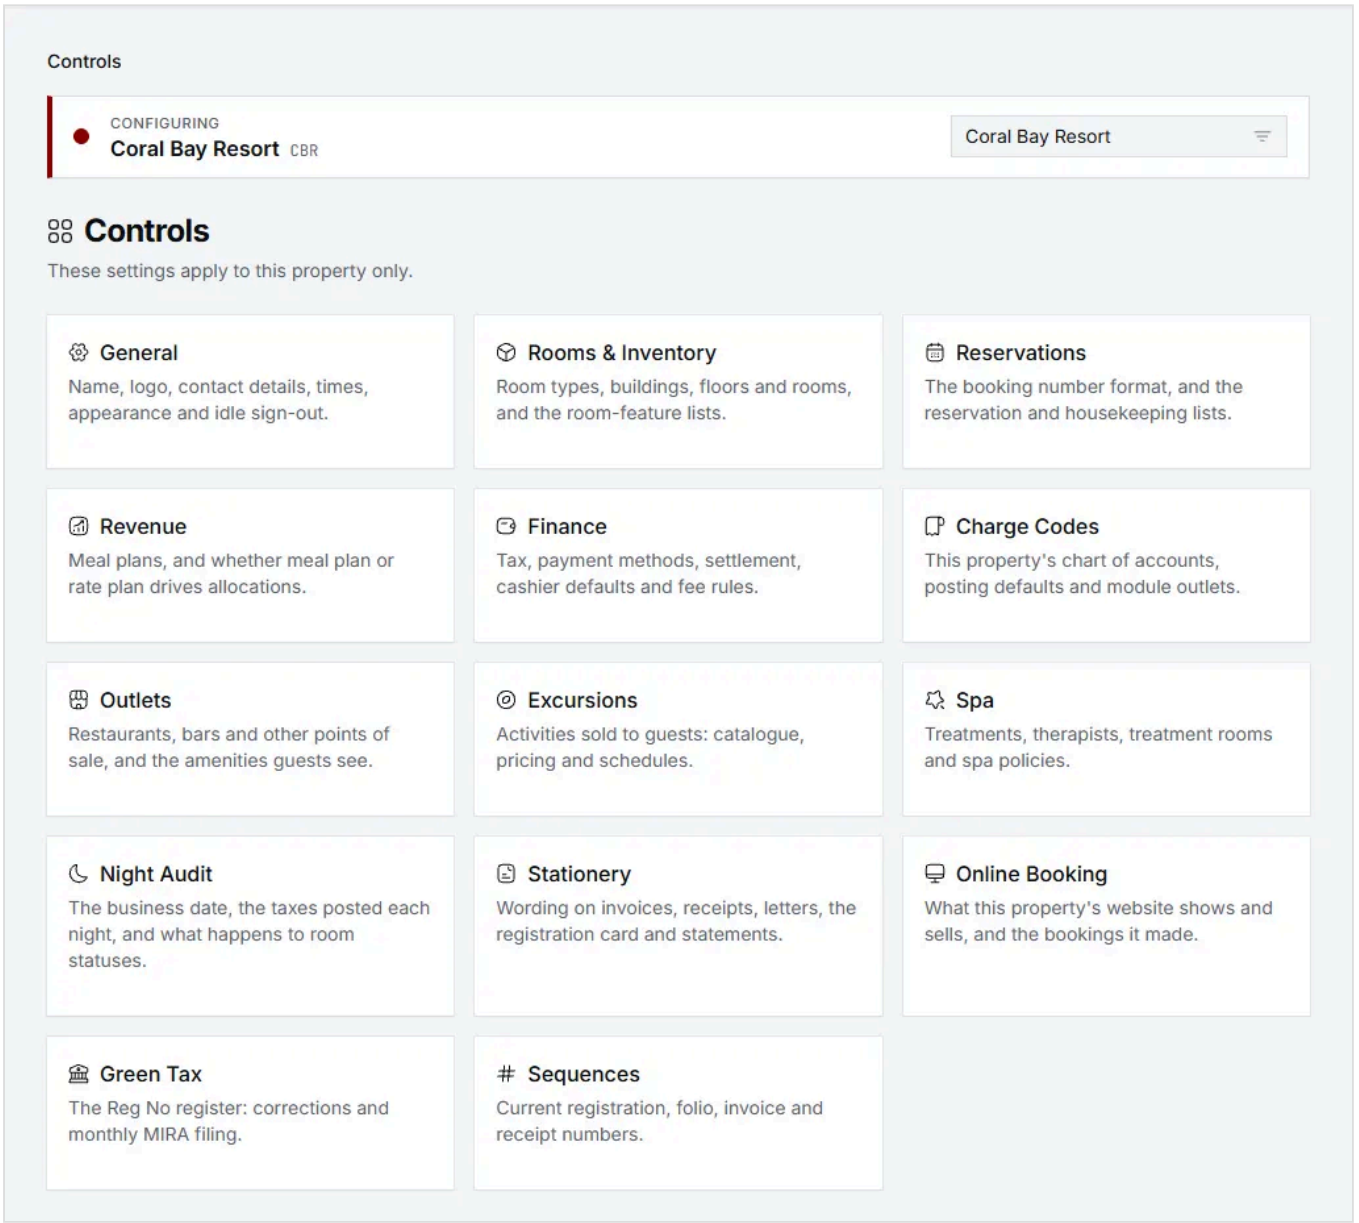

Property setup

What a newly provisioned property already has, what you add, and the order to add it in.

Finding the property pages

In the Hub sidebar, under **Property**, choose **Controls**. The band at the top shows which property you are configuring; use its switcher to change property. Every setting on these pages applies to that property only.

Controlsin the sidebar also opens into a list of the property's sections, so you can go straight from one section to the next. Pages with three or more sections show links under the page title that jump to each one.

How saving works

A section with several fields has one **Save** at the bottom. It stays greyed out until you change something; beside it you see **Unsaved changes**, then **Saved** once it has gone through.

A single switch or drop-down on its own saves as soon as you change it, and shows a brief **Saved** tick.

In an add or edit form, choose **Create** for something new, or **Save** for a change.

Deleting anything asks you to confirm first.

What a new property already has

Already there	Details
Business date	Your go-live date. Night audit moves it forward each night.
Base Rate plan	A locked rate plan (code BASE) with no prices yet. It is the fallback price for every room type.
System charge codes	Accommodation (1000), cancellation and no-show fees, service charge (7000), GST (8000), Green Tax (8500), commission, deposit, payment and adjustment codes, already wired to post their taxes.
Posting defaults	Room charges post to 1000, Green Tax to 8500, commission to 9100.
Tax rates	Maldives defaults: GST 17%, service charge 10%, Green Tax 12 per adult and 6 per child per night. Prices include taxes.
Room features	A starter set of bed types, views and amenities to describe rooms with. Rename, delete or add to it.
Fee rules	A cancellation and a no-show fee, both switched off at zero.
Night audit	Manual (not scheduled), no-shows marked at the arrival night's audit.
Documents	Registration card and eRegistration on (72-hour links), detailed folios.

Everything else starts empty: room types and rooms, prices, revenue charge codes (food, beverage, transport and so on), payment methods, outlets, meal plans, allocations, the other lists (reservation lists such as special requests), and the wording on documents.

The setup steps

Work through them in this order. Each step only uses what the steps before it created.

Step	Page in the Hub	You set up	Needs
1. General	General	Name, address, logo, times, colour, idle sign-out	—
2. Tax & payments	Finance	Tax rates, custom taxes, payment methods, cashier defaults, fee rules	—
3. Charge codes	Charge Codes	Your revenue codes and what they post	Custom taxes (step 2)
4. Outlets	Outlets	Restaurants, bars, shops, spa and excursion desks	Charge codes
5. Rooms & inventory	Rooms & Inventory	Room features, room types, buildings, floors, rooms	—
6. Rates & packages	Revenue (Hub and dashboard)	Prices, rate plans, allocations, meal plans	Room types, charge codes
7. Reservations & numbering	Reservations, Sequences	Booking number format, lists, starting numbers	—
8. Night audit	Night Audit	Business date, nightly postings, no-shows, schedule	Fee rules (step 2)
9. Stationery	Stationery	Invoice, receipt, letter and registration-card wording	General details

Then, if they apply to you:

Optional	When
Excursions	Your enterprise has the Excursions add-on.
Spa	Your enterprise has the Spa add-on.
Online booking	Your own website takes bookings.
Channel manager	You sell through online travel agencies and have a Beds24 account to connect.

Optional	When
Green Tax register	Maldives properties: nothing to set up, but read it before your first month-end.

SETTING UP A SECOND PROPERTY?

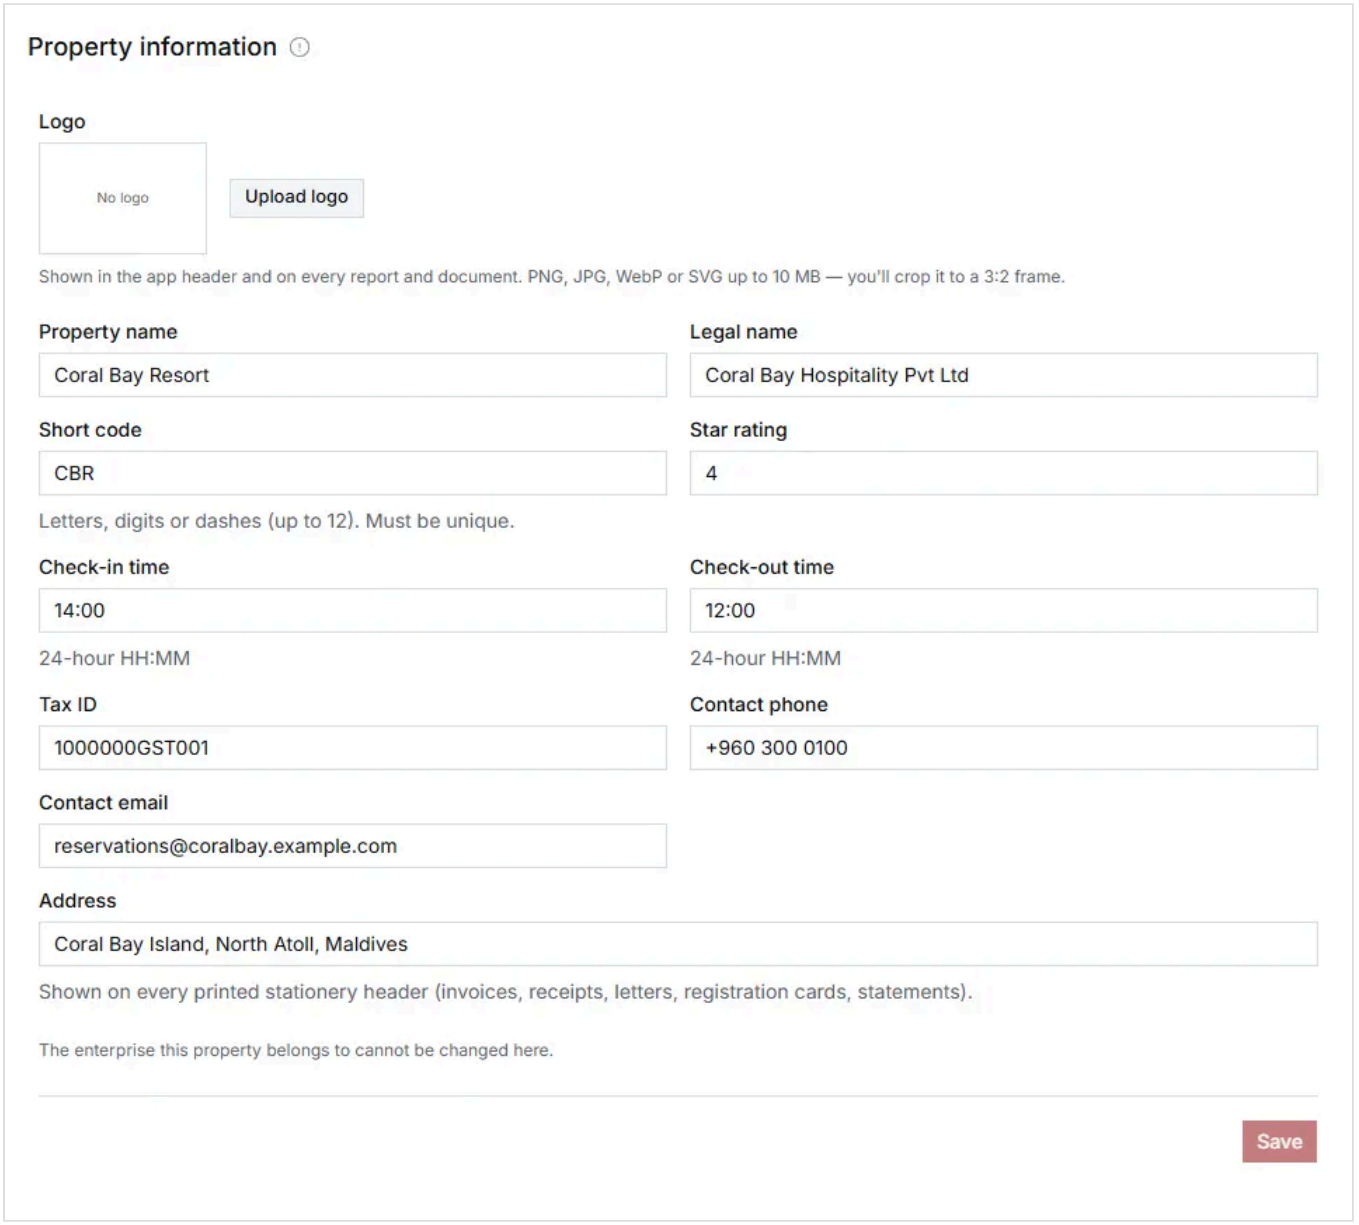

Most property pages have a **Copy from…** button. It copies from another active property of your enterprise: room types and room-feature lists, reservation lists, meal plans, allocations, tax profiles, payment methods, charge codes, outlets, stationery, and the Spa and Excursion catalogues. Items the property already has are skipped, never overwritten. Rooms, rate plans, therapists, departures and numbering are never copied: they are physical or specific to each property.

Step 1 — General

The property's identity: the name, address and contact details printed on every document, its standard times, its look, and how quickly idle staff are signed out.

Where: Hub › Controls › General · **Who:** Property Setup

Property information

Field	Used for
Property name	Everywhere: screens, documents, the website.
Legal name	The company that issues invoices. Printed on invoices and receipts.
Short code	The property's code. Unless you set a prefix on the Reservations page, booking numbers start with it (CBR-000123). Codes are unique across Uppsolut Stay, so avoid changing it.
Star rating	0–5. Shown to your website through the Booking API.
Check-in / Check-out time	Your standard times, as HH:MM (24-hour), e.g. 14:00. The Green Tax 12-hour rule can use them.
Logo	Choose Upload logo (PNG, JPG, WebP or SVG, up to 10 MB), then crop it to the 3:2 frame; previews show the app header and a document header. Choose Save logo. It appears in the app header, on every document, report and email, and on your website.
Tax ID	Your tax registration number (TIN). Printed on tax invoices.
Contact phone / Contact email	Printed on documents, and given to your website.
Address	Printed in the header of every document: invoices, receipts, letters, registration cards and statements.

Choose **Save** at the bottom of the card; it is greyed out until you change something, and shows **Saved** once done. Changes apply to documents printed from now on. The logo saves on its own when you choose **Save logo**. For a crisp result, upload a logo with little empty space around it; zoom in on the crop to trim what is left.

The form checks each field as you type: times as `14:00`, a valid email, a star rating of 0–5, and a short code no other property uses.

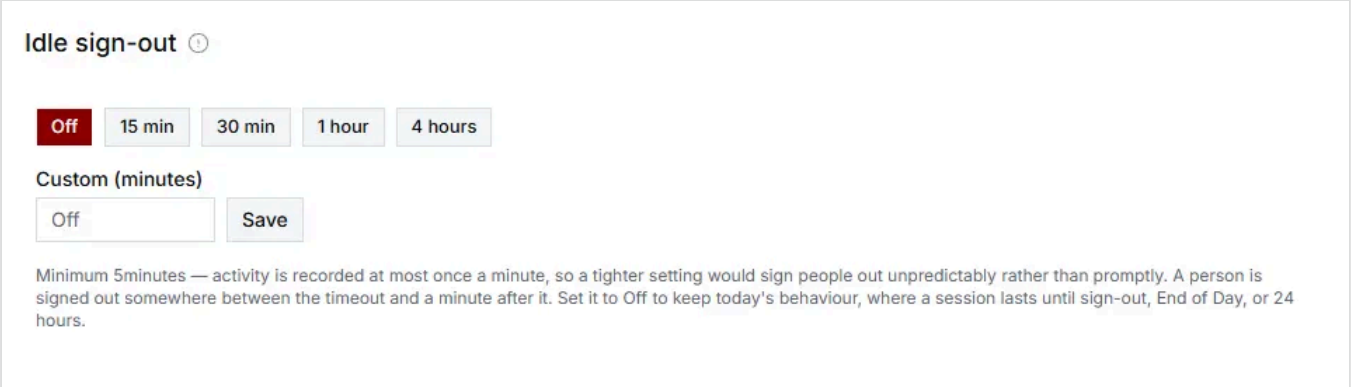

Currency and time zone are fixed once the property is active and can't be changed here. If either is wrong, contact Uppsolut before you take any bookings.

Appearance

Banner colour: a colour for this property, used on the top line of the dashboard, the Hub band and as the accent on printed documents. With several properties, a different colour for each helps staff see at a glance where they are working. It saves as soon as you click, with a brief **Saved** tick.

Stationery font: the typeface of printed documents (Geist, Inter, Roboto, Georgia or Courier). Saves on click, with the same tick.

Idle sign-out

How long someone at this property can be inactive before they are signed out. Choose a preset, which saves immediately, or type a **Custom (minutes)** value of at least 5 and choose **Save**. **Off** keeps people signed in until they sign out, End of Day, or 24 hours.

Where staff share computers, as at most front desks, 15 or 30 minutes is a sensible choice.

Step 2 — Tax & payments

How prices are taxed, how guests pay, and the fees for deposits, cancellations and no-shows. Your finance team should own this step.

Where: Hub › Controls › Finance · **Who:** Property Setup

Tax

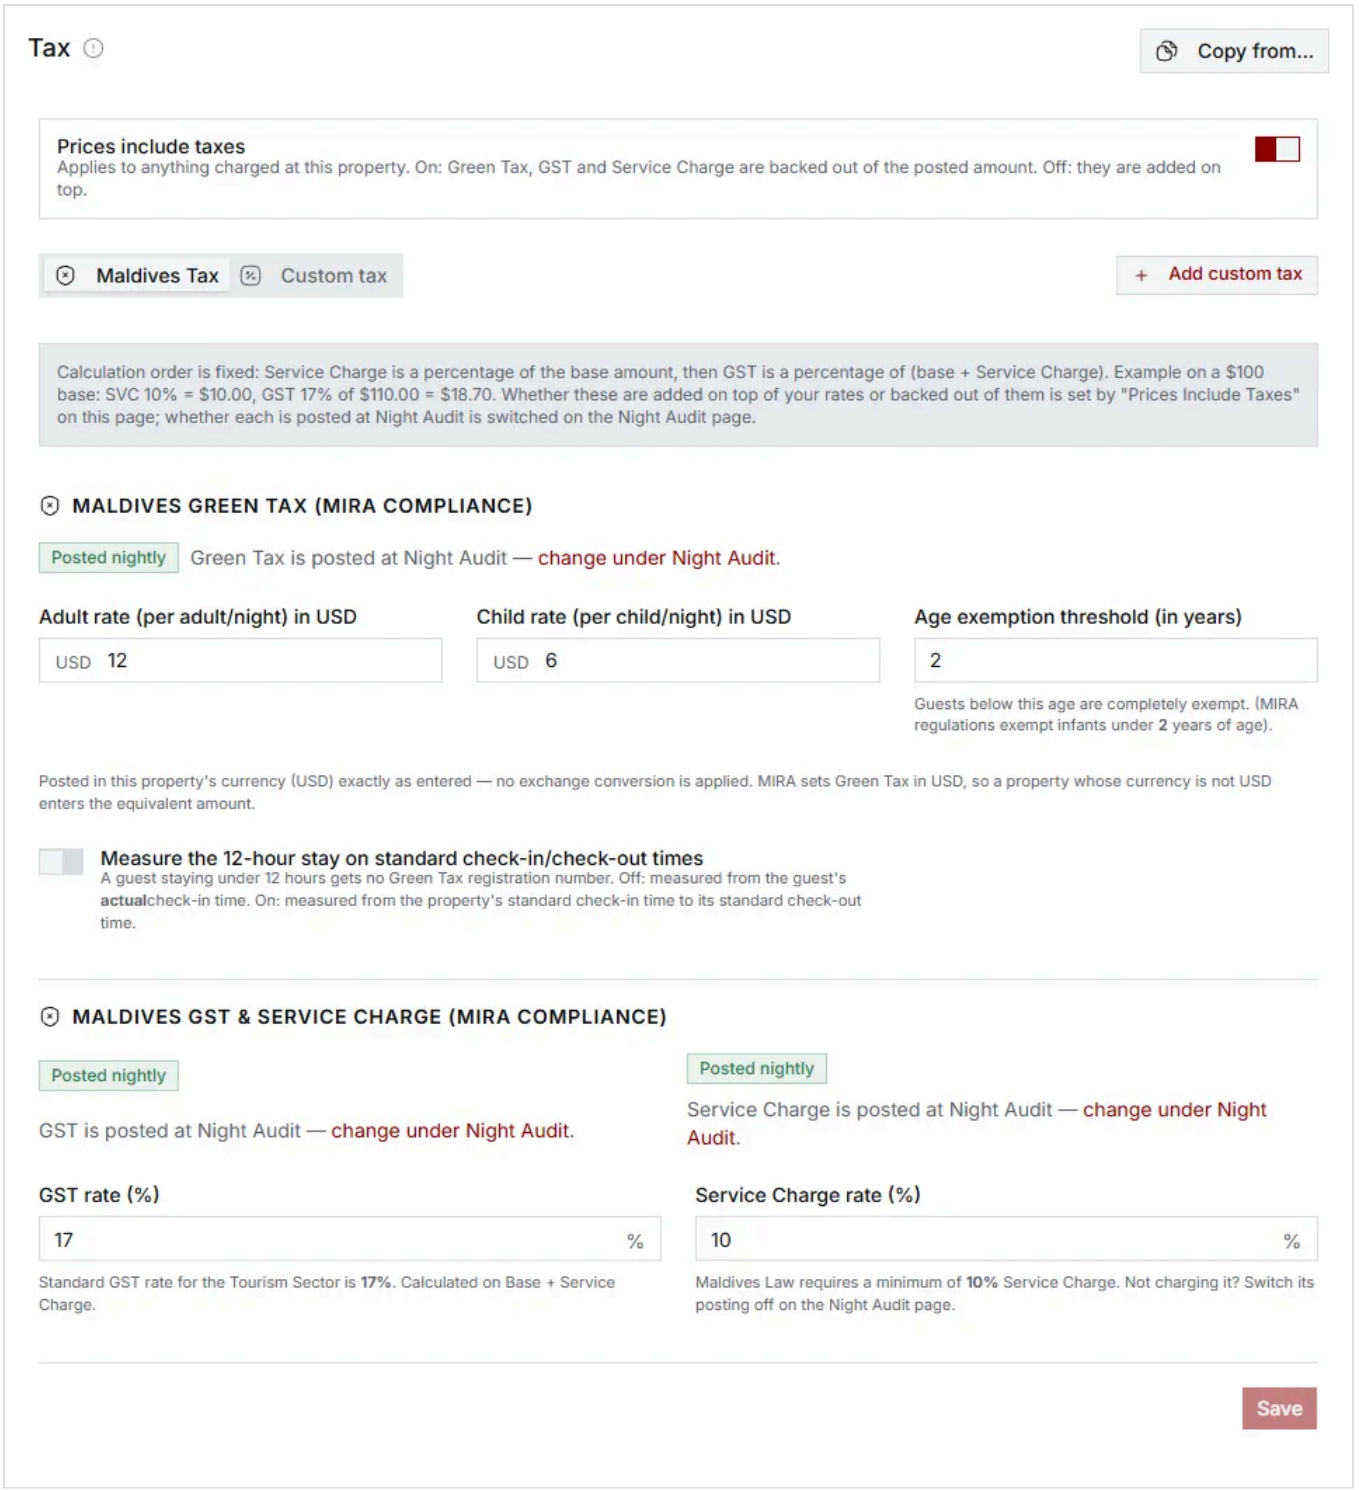

Prices include taxes

The first decision, and it affects every price you enter from now on:

Setting	A room priced at 200 posts...
On (default)	200 in total: the service charge, GST and Green Tax are worked out of the 200.
Off	200 plus the service charge, GST and Green Tax on top.

The switch saves as soon as you change it, with a brief **Saved** tick. Choose it before you enter any prices, and don't change it once you are live: prices you have entered would then mean something different.

Maldives Tax

Field	Default	Notes
Adult rate (per adult/night)	12.00	Green Tax per adult per night, in the property's currency. MIRA sets Green Tax in USD: if your currency isn't USD, enter the equivalent.
Child rate (per child/night)	6.00	Green Tax per child per night, as above.
Age exemption threshold	2	Guests under this age pay no Green Tax.

Field	Default	Notes
Measure the 12-hour stay on standard check-in/check-out times	Off	Off: the stay is measured from the actual check-in time. On: from your standard times (General page).
GST rate (%)	17	Charged on the price plus the service charge.
Service Charge rate (%)	10	Charged on the price. At least 10%, the legal minimum. A property that doesn't charge it switches its posting off on Night Audit.

Choose **Save** at the bottom of the tab. Each levy shows whether it is **Posted nightly**. Whether each is posted at all is switched on the Night Audit page.

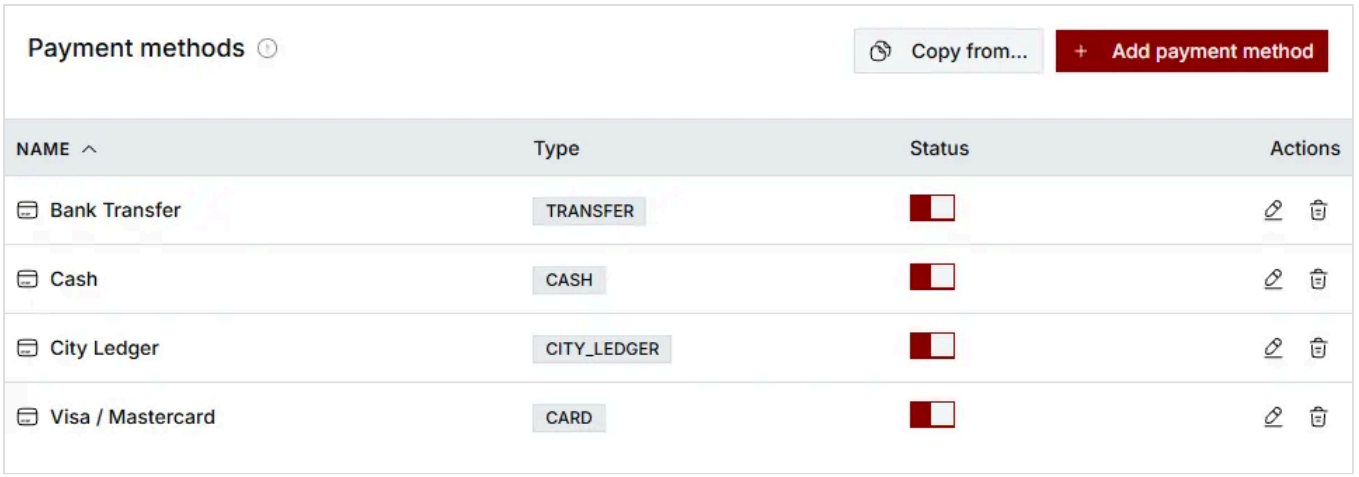

Custom tax

For anything the Maldives defaults don't cover, for example an item sold without service charge, create a tax profile: on the **Custom tax** tab choose **Add custom tax**, give it a **Profile name**, and add one or more **Tax lines** (name, rate %, and whether it is calculated on the subtotal or on the subtotal plus the lines before it). A charge code or an outlet can then use the profile instead of the Maldives defaults. Choose **Create** to add it.

Create custom profiles now: charge codes (next step) pick from them. A profile that a charge code or outlet still uses can't be deleted; the message says how many use it. Deleting one you no longer need asks you to confirm.

Payment methods

> **REQUIRED**
> A new property has no payment methods, and no folio can be settled until you add them.

Choose **Add payment method** for each way guests pay, then **Create**:

Field	Notes
Method name	What cashiers see, e.g. Cash, Visa / Mastercard, Bank Transfer, City Ledger.
Payment type	CASH, CARD, TRANSFER, CITY LEDGER, CHEQUE or VOUCHER. The type decides how the payment is reported: cash, card, transfer and city ledger payments each post to their own payment code.
Active	Inactive methods are hidden from cashiers but kept in history.

Add a **City Ledger** method if you invoice companies or travel agents. The next setting needs it.

Settlement defaults

City Ledger settlement method: the method used when a company's folio is moved to the city ledger at check-out. Pick your City Ledger method and choose **Save**.

Cashiering defaults

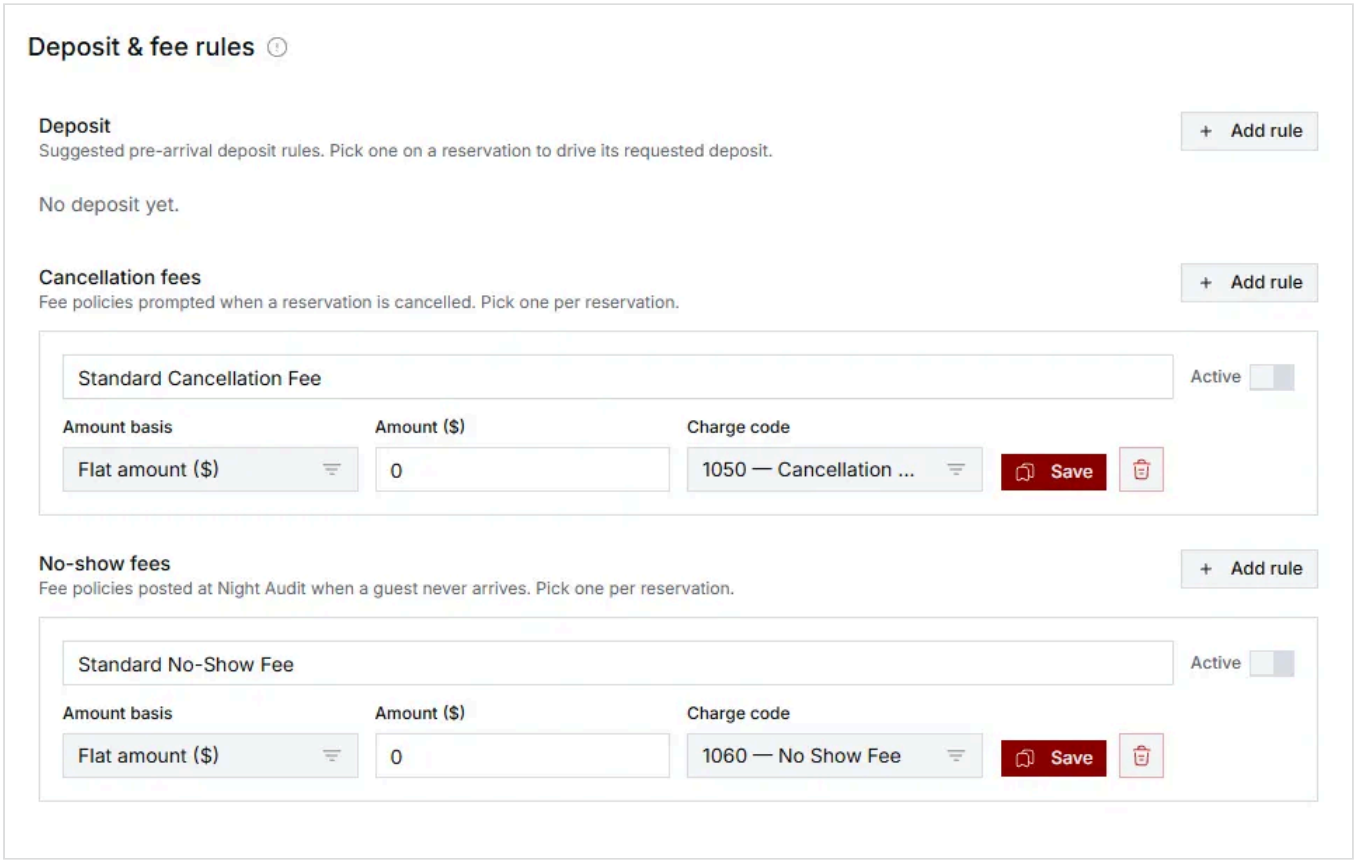

Field	Default	Notes
Default opening float	300	The cash a cashier starts a shift with. Cashiers can change it when opening a shift.

Field	Default	Notes
Exchange: from / to currency	USD → MVR	The currency pair offered for exchanges at the desk.

Choose **Save**.

Deposit & fee rules

Rules for the deposit to ask for, and the fee to charge on cancellation or no-show. The desk picks a rule on each reservation; the fee is collected through deposits, not added to the bill.

Field	Options
Name	What the desk sees, e.g. 'Standard cancellation — 1 night'.
Active	Only active rules can be chosen.
Amount basis	Flat amount, % of stay, First night, or Full stay.

Field	Options
Value	The amount or percentage (Flat and % only).
Charge code	Cancellation and no-show rules only: the code the fee posts to. Use the ready-made 1050 Cancellation Fee and 1060 No Show Fee.

A new property has a **Standard Cancellation Fee** and a **Standard No-Show Fee**, both inactive at zero. Set their amounts and switch them on if you charge these fees, and add a deposit rule if you take deposits. Each rule has its own **Save** button.

Step 3 — Charge codes

Every amount that lands on a guest's bill posts to a charge code. Codes are grouped for reports, and each one knows which taxes to add. This is the property's chart of accounts.

Where: Hub › Controls › Charge Codes · **Who:** Property Setup

How it fits together

Level	Example	Purpose
Group	FNB — Food & Beverage	The top of the tree. Its Reports As bucket (Room, Food & Beverage, Transport, Other, Tax, Non-Revenue, System) decides where revenue appears in reports.
Subgroup	20RV — Restaurant	A finer grouping inside a group, e.g. Restaurant and Bar inside Food & Beverage.
Charge code	2001 — Breakfast	What staff post to. Belongs to one subgroup.
Generates	2001 → 7000 service charge, 8000 GST	The taxes and levies a code adds automatically when it is posted.

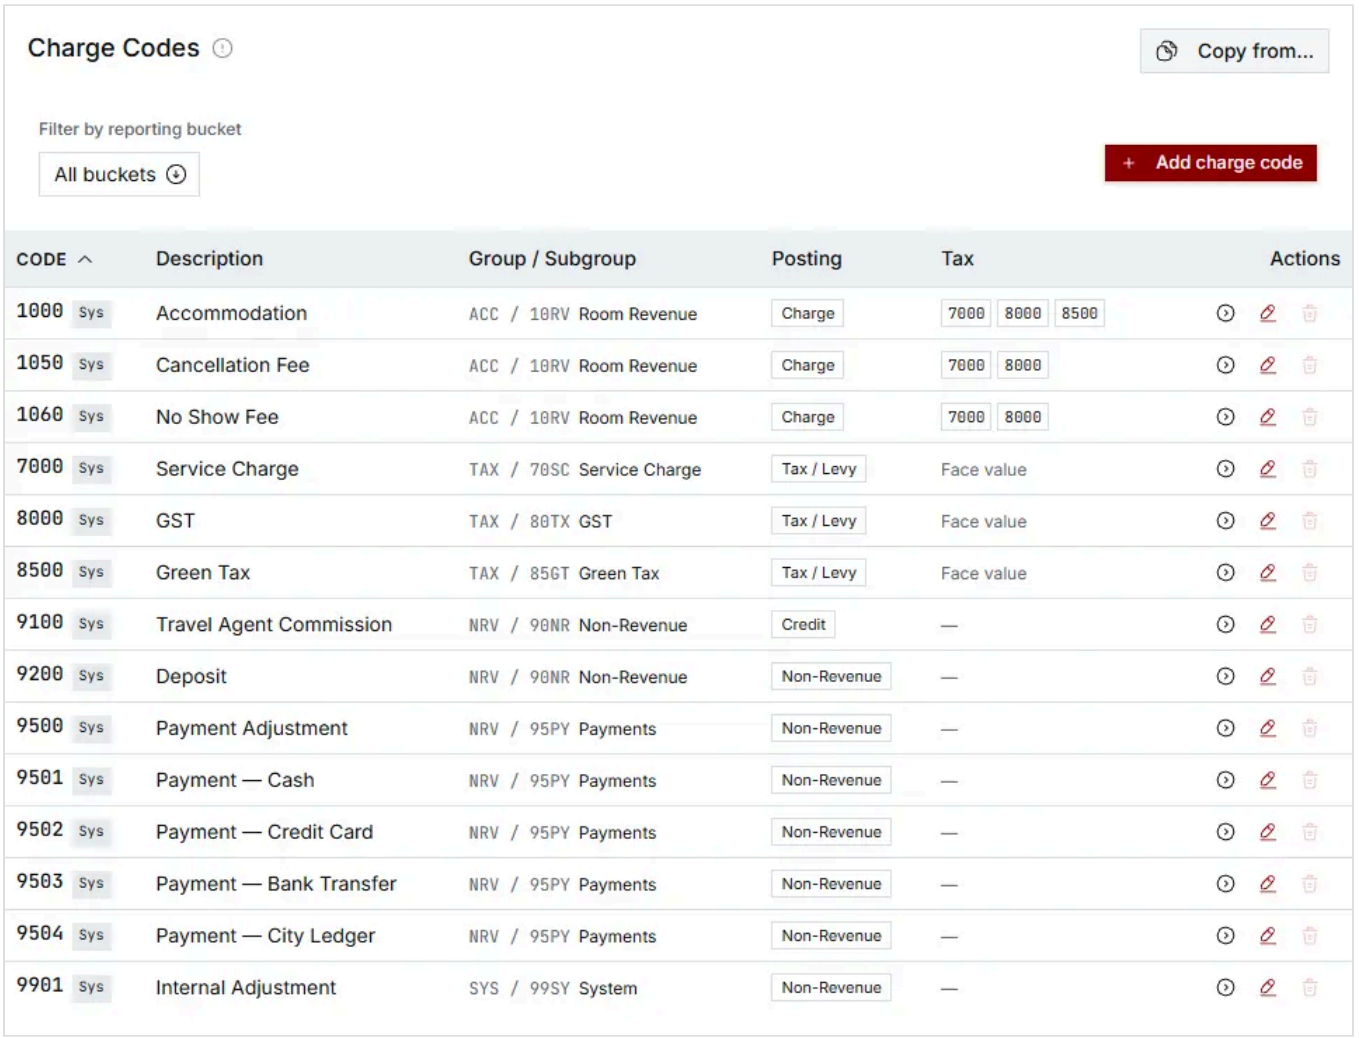

Agree the codes with your finance team or accountant first. The numbering is yours to choose. A common scheme:

Range	Used for
1000–1999	Accommodation (1000 is already there)
2000–2999	Food & beverage: restaurant, bar, in-room dining, meal-plan components
3000–3999	Spa
4000–4999	Excursions and activities
5000–5999	Transport: transfers, speedboat, seaplane
6000–6999	Other income: laundry, shop, telephone

Range	Used for
7000–9999	Taxes, non-revenue and payments (system codes already there)

What is already there

A new property has the **system codes** (marked **Sys**) under ready-made groups. You can rename their description, move them to another subgroup or change their tax, but not their code number, and they can't be deleted. Accommodation (1000) already generates service charge, GST and Green Tax.

CODE	Description	Group / Subgroup	Posting	Tax	Actions
1000 Sys	Accommodation	ACC / 10RV Room Revenue	Charge	7000 8000 8500	
1050 Sys	Cancellation Fee	ACC / 10RV Room Revenue	Charge	7000 8000	
1060 Sys	No Show Fee	ACC / 10RV Room Revenue	Charge	7000 8000	
7000 Sys	Service Charge	TAX / 70SC Service Charge	Tax / Levy	Face value	
8000 Sys	GST	TAX / 80TX GST	Tax / Levy	Face value	
8500 Sys	Green Tax	TAX / 85GT Green Tax	Tax / Levy	Face value	
9100 Sys	Travel Agent Commission	NRV / 90NR Non-Revenue	Credit	—	
9200 Sys	Deposit	NRV / 90NR Non-Revenue	Non-Revenue	—	
9500 Sys	Payment Adjustment	NRV / 95PY Payments	Non-Revenue	—	
9501 Sys	Payment — Cash	NRV / 95PY Payments	Non-Revenue	—	
9502 Sys	Payment — Credit Card	NRV / 95PY Payments	Non-Revenue	—	
9503 Sys	Payment — Bank Transfer	NRV / 95PY Payments	Non-Revenue	—	
9504 Sys	Payment — City Ledger	NRV / 95PY Payments	Non-Revenue	—	
9901 Sys	Internal Adjustment	SYS / 99SY System	Non-Revenue	—	

The groups are there too (Accommodation, Food & Beverage, Transport, Others, Taxes & Levies, Non-Revenue, System, plus Spa and Excursions if you have those add-ons), but only the subgroups that hold system codes. Your own revenue subgroups and codes are up to you.

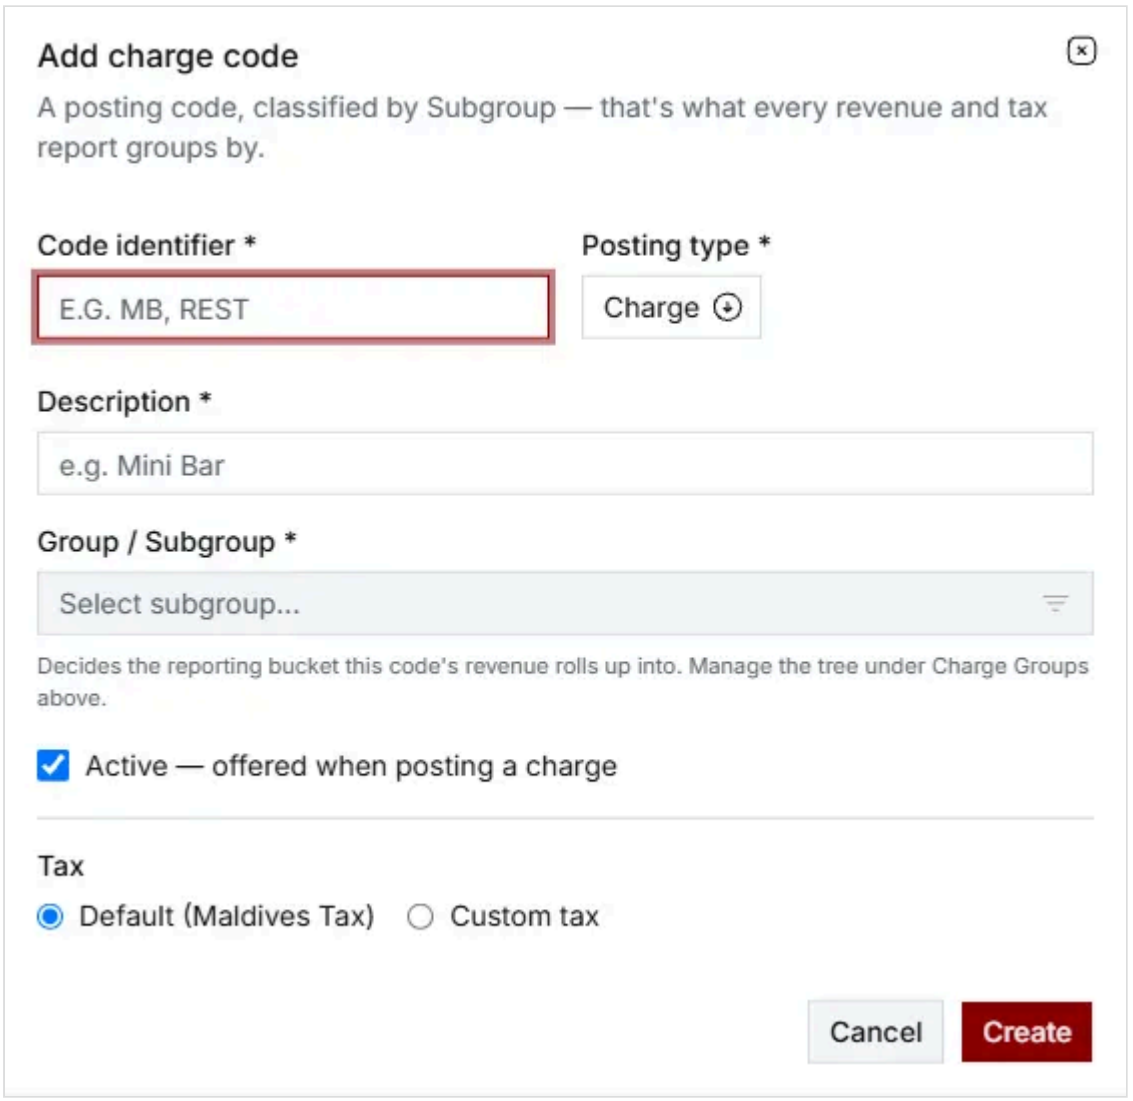

Adding your revenue codes

1. Add subgroups

In **Charge groups & subgroups**, add the subgroups your codes will sit in: choose the **+** (**Add subgroup**) on the group's row, then a **Code** (e.g. `20RV`) and a **Name** (e.g. Restaurant), and choose **Create**. Choose **Add group** for a group of your own only if none of the existing ones fits.

2. Add charge codes

Choose **Add charge code**, fill in the form and choose **Create**:

Field	Notes
Code identifier	Unique at this property, e.g. 2001. Uppercased.

Field	Notes
Posting type	Charge for anything you sell. Tax, Levy, Credit and Non-Revenue are for special codes; you rarely need them.
Description	What staff and guests see on the bill, e.g. Breakfast.
Group / Subgroup	Decides the reporting bucket.
Active	Only active codes are offered when posting.
Tax	Default (Maldives Tax) adds service charge and GST. Custom tax uses a profile from Finance (step 2).

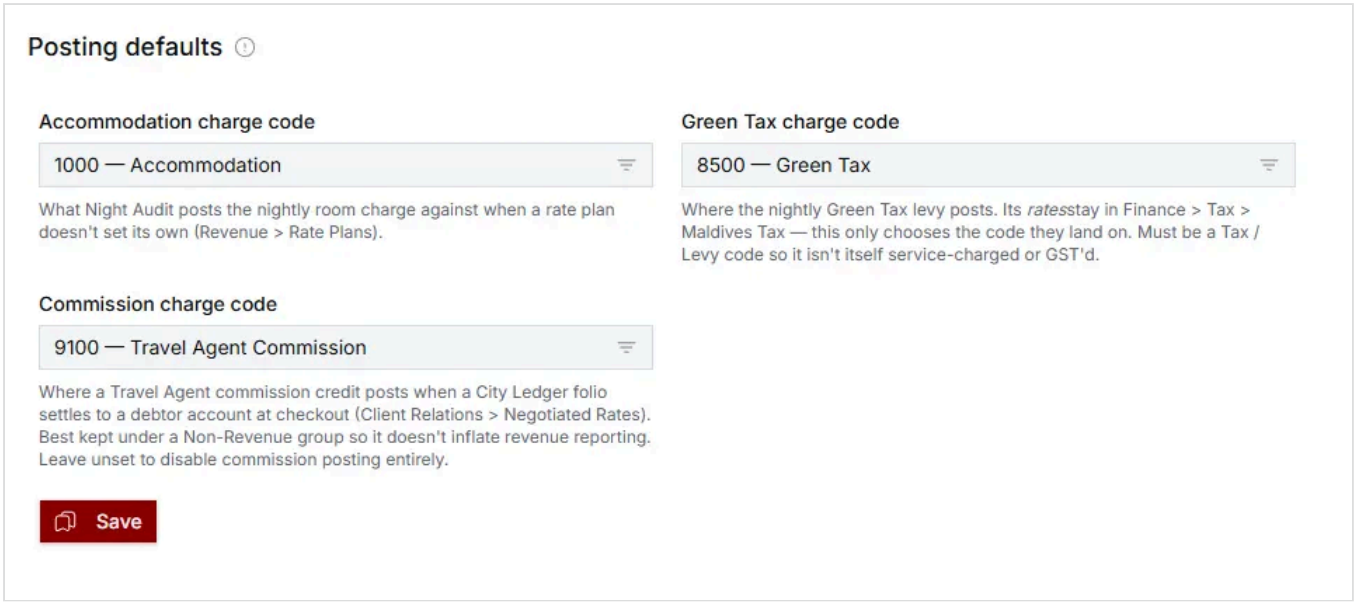

A new **Charge**code automatically generates service charge (7000) and GST (8000). One in an Accommodation group also generates Green Tax. Check the result with the code's **Generates** button.

3. Adjust what a code generates (if needed)

Open a code's **Generates** to add, change or remove what it posts automatically, for example a code sold without service charge. Each line has the code it **Generates**, a **Method** (the service charge, GST or Green Tax rates from Finance, a percentage, a flat amount, or an amount per person per night), what it is **Calculate on**, and the **Order** lines are worked out in. Choose **Add** to add the line.

> **CODES IN USE**
> Deleting a code asks you to confirm. Once anything has been posted to a code, it can't be deleted, only made inactive. Getting the list right before go-live saves clutter later.

Posting defaults

Default	Pre-set to	Used for
Accommodation charge code	1000	Nightly room charges, unless a rate plan names its own code.
Green Tax charge code	8500	Green Tax postings.
Commission charge code	9100	Travel-agent commission. Choose None to stop posting commission.

Leave these as they are unless your accountant wants room revenue split differently. After a change, choose **Save**.

Spa outlet and Excursion outlet

If you have the Spa or Excursions add-on, this page also has a **Spa outlet** and an **Excursion outlet**card. Spa and excursion charges can't post until you pick an outlet for each. Create the outlets in the next step, then come back and link them.

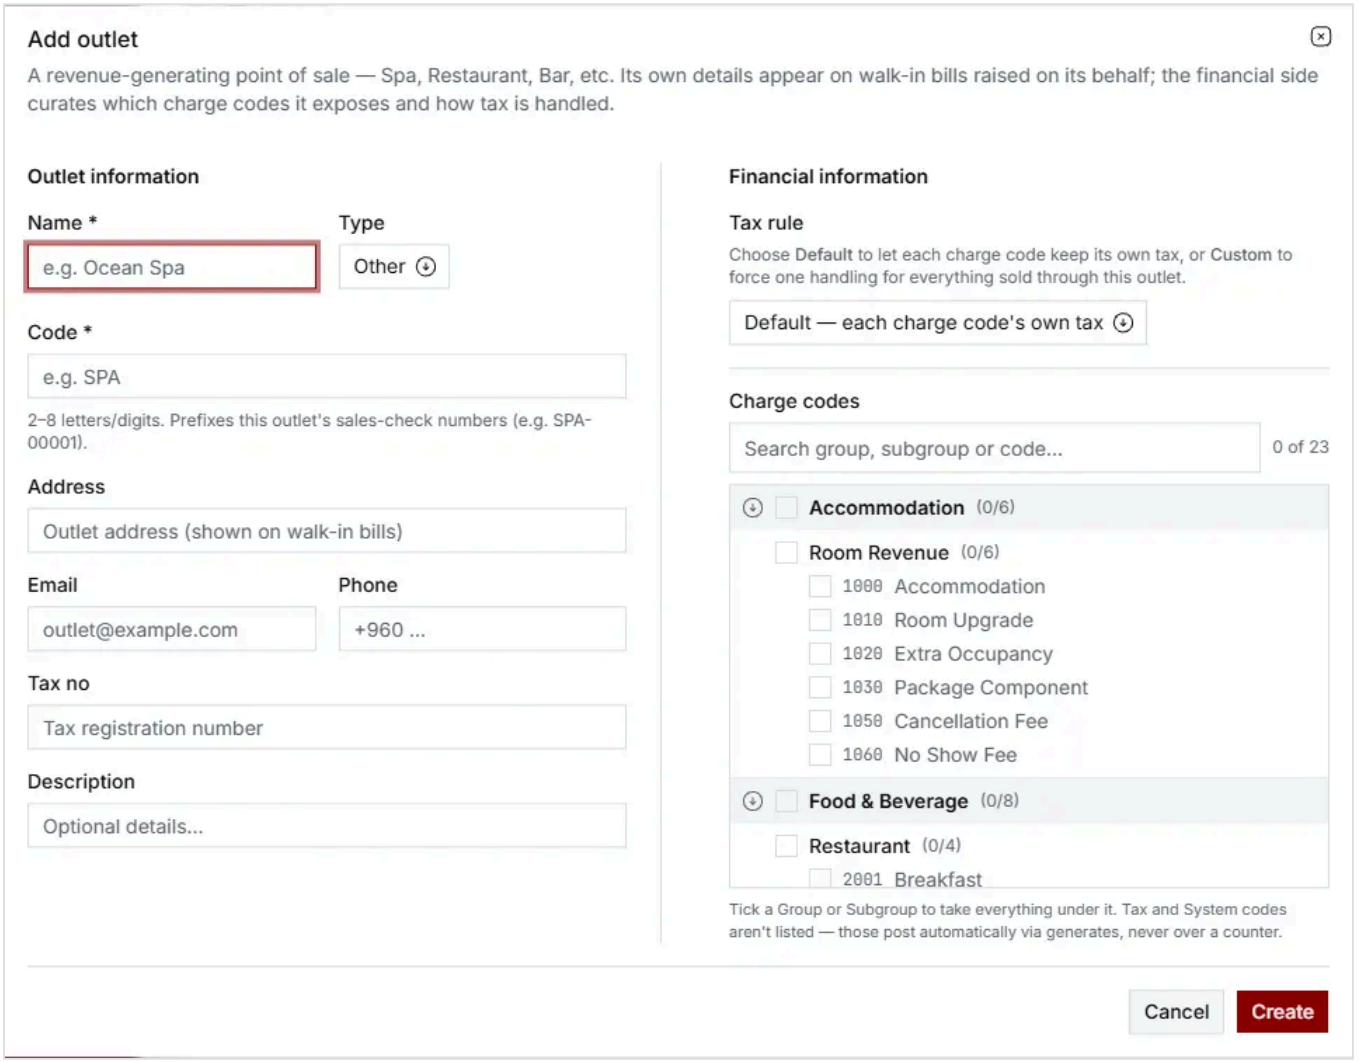

Step 4 — Outlets

An outlet is a point of sale: a restaurant, bar, shop, spa or excursion desk. Each one sells its own set of charge codes, numbers its own sales checks and can raise its own walk-in bills.

Where: Hub › Controls › Outlets · **Who:** Property Setup

Adding an outlet

Create one outlet for each place that sells to guests. Choose **Add outlet**, fill in both sides and choose **Create**:

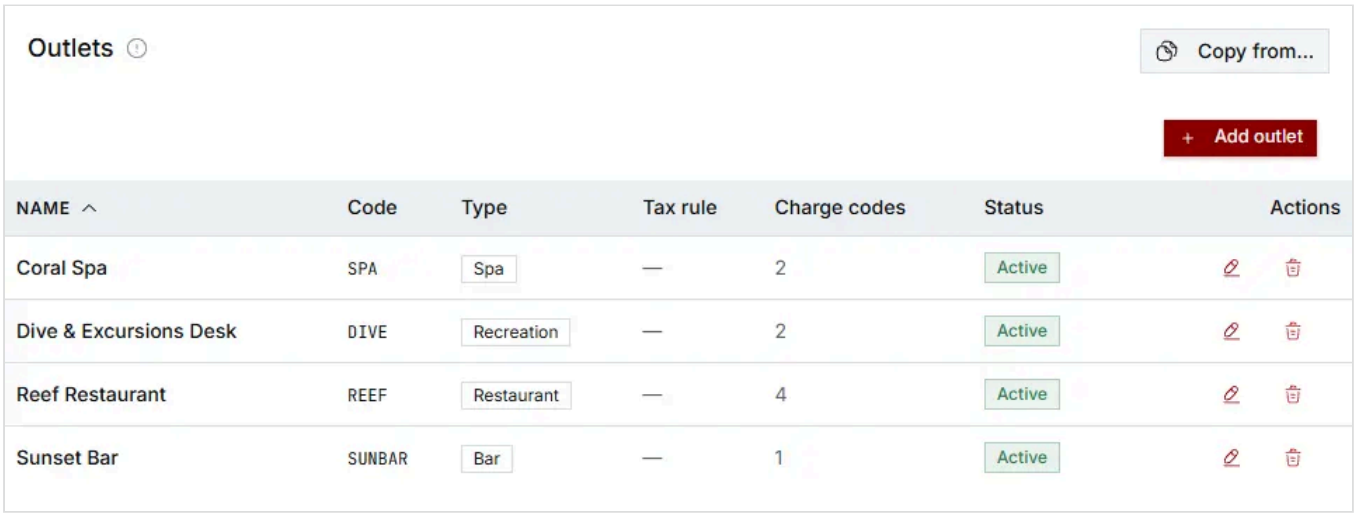

Outlet information

Field	Notes
Name	e.g. Reef Restaurant.
Type	Spa, Restaurant, Bar, Retail, Transport, Recreation or Other. For grouping and reports.
Code	2–8 letters or digits, unique at the property, e.g. REEF. It prefixes the outlet's sales-check numbers (REEF-00001). Numbers are never reused.
Address, Email, Phone, Tax no	Optional. Printed on walk-in bills the outlet raises in its own name.
Description	Optional.

Financial information

Field	Notes
Tax rule	Default: each charge code keeps its own tax (usual). Custom: force the Maldives defaults, or a custom tax profile, on everything sold here.
Charge codes	Tick what this outlet sells. Tick a group or subgroup to take everything under it. Only active revenue codes are listed, because taxes post automatically.

The outlet can only sell the codes you tick here, so staff at the bar can't post spa treatments by mistake. Creating an outlet does not create charge codes: add them in step 3 first.

> **SPA AND EXCURSIONS**

> If you have these add-ons, create an outlet for each (e.g. a Spa outlet and an excursions desk), then link them on **Charge Codes › Spa outlet / Excursion outlet**. Until they are linked, spa and excursion charges can't post, and the Hub Overview says so.

An outlet that has taken revenue can't be deleted. Edit it and untick **Active** to retire it.

Amenities

The **Amenities**card lists the property's facilities, such as the pool, gym, dive centre or kids' club, with an optional description. They are shown to guests on your website through the Booking API. Type a **Facility name** and choose **Add**. Each name can be used once; edit or delete an amenity from its row (deleting asks you to confirm).

Step 5 — Rooms & inventory

What you sell (room types) and the physical rooms guests stay in. Nothing can be booked until this step is done.

Where: Hub › Controls › Rooms & Inventory · **Who:** Property Setup

Work in this order. Each item uses the one before it:

1. **Room features**: the bed types, views and amenities you describe rooms with.
2. **Room types**: what guests book and you price.
3. **Buildings**, then **floors**: where rooms are.
4. **Rooms**: each physical room, its type and its floor.

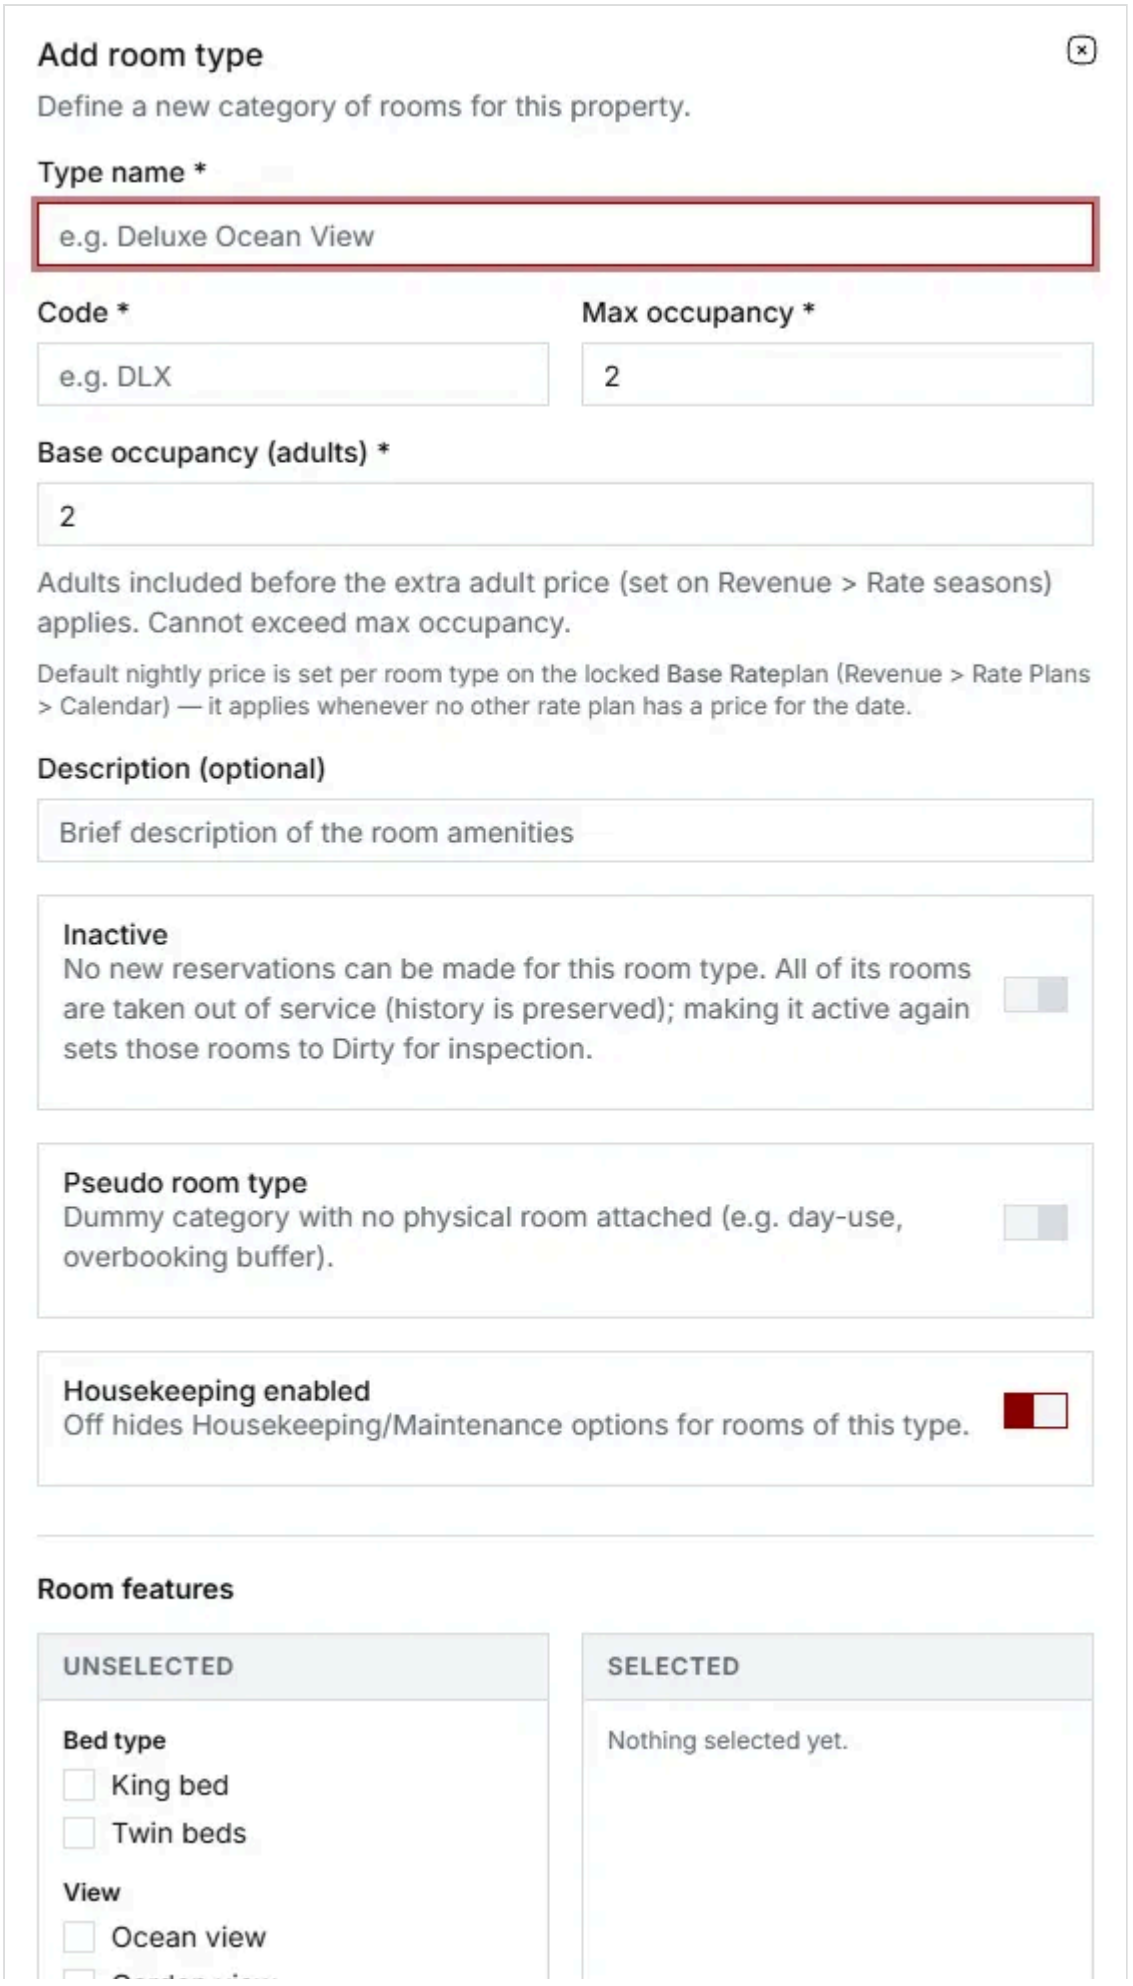

1. Room features

In the **Room features** card, review the three tabs: **Bed type** (King bed, Twin beds), **View** (Ocean view, Garden view) and **Amenities** (Private pool, Minibar, Wi-Fi). To add your own, type a **Code (internal)** and a **Display value** and choose **Add**. The code can't be changed later; the display value can. Features appear on room types and are shown to your website.

You don't start from an empty list: every new property comes with a starter set of common bed types (Single, Twin, Queen, King and more), views (Ocean, Garden, City and more) and amenities (Air conditioning, Wi-Fi, Minibar, Balcony and more). Rename the ones you want worded differently, switch off the ones you don't use, and add your own on top.

2. Room types

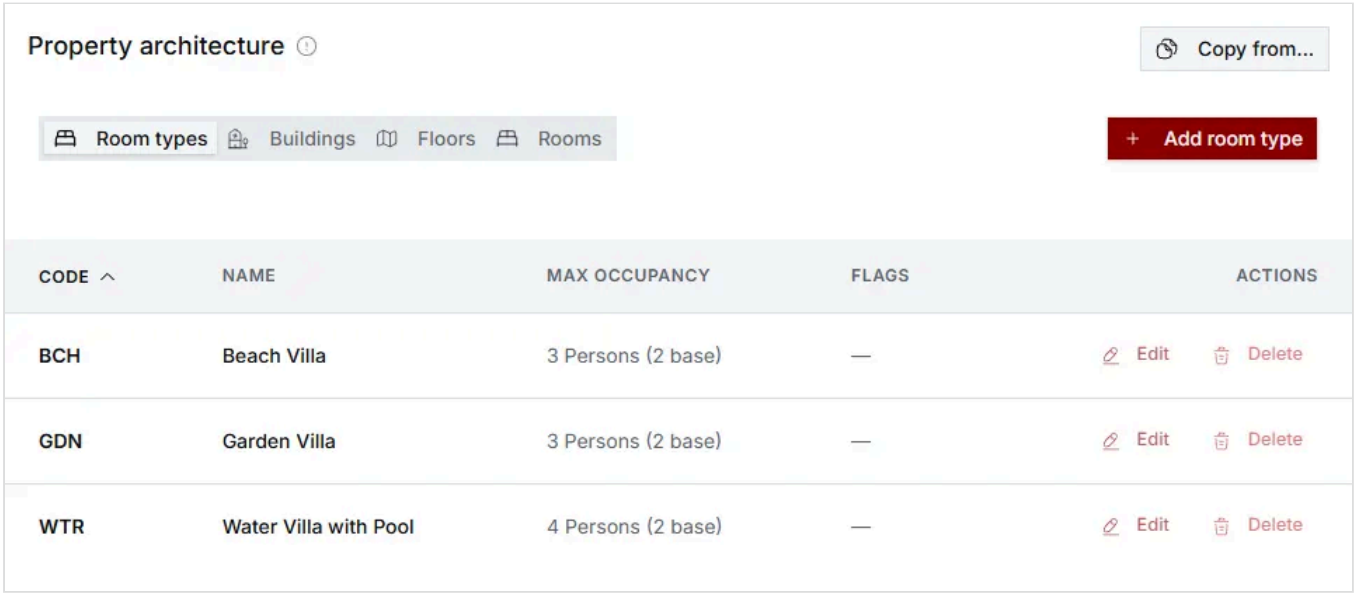

On the **Room types** tab of **Property architecture**, choose **Add room type**, fill in the form and choose **Create**:

Add room type
Define a new category of rooms for this property.
Type name *
e.g. Deluxe Ocean View
Code *
e.g. DLX
Max occupancy *
2
Base occupancy (adults) *
2
Adults included before the extra adult price (set on Revenue > Rate seasons) applies. Cannot exceed max occupancy.
Default nightly price is set per room type on the locked Base Rateplan (Revenue > Rate Plans > Calendar) — it applies whenever no other rate plan has a price for the date.
Description (optional)
Brief description of the room amenities
Inactive
No new reservations can be made for this room type. All of its rooms are taken out of service (history is preserved); making it active again sets those rooms to Dirty for inspection.
Pseudo room type
Dummy category with no physical room attached (e.g. day-use, overbooking buffer).
Housekeeping enabled
Off hides Housekeeping/Maintenance options for rooms of this type.
Room features
UNSELECTED
SELECTED
Bed type
King bed
Twin beds
View
Ocean view
Nothing selected yet.

Garden view

Field	Notes
Type name	What guests and staff see, e.g. Beach Villa.
Code	Short and unique at the property, e.g. BCH. Used on the tape chart, reports and channel mapping.
Max occupancy	The most guests the room takes. The desk is warned above it; your website can't book above it.
Base occupancy (adults)	Adults included in the room price, no more than Max occupancy. Each adult above it pays the extra-adult price; every child pays the extra-child price.
Description	Optional.
Inactive	Stops new bookings, and takes all rooms of the type out of service. Switching it back on returns those rooms as Dirty, for housekeeping to prepare.
Pseudo room type	For things that are not real rooms, like a day-use or 'no room' type. Never in availability, the website or channels.
Housekeeping enabled	On for normal rooms. Off leaves the rooms off the housekeeping board.
Room features	Tick the features every room of this type has.

There is no price here. A room type's price comes from the rate plans in step 6.

> **DELETING**
> Deleting asks you to confirm first. A room type, building, floor or room that has ever been booked can't be deleted: the message says why. Make a room type **Inactive** instead. Deleting an unused room type also deletes its rooms. Your licence limits the number of room types and rooms; if you reach it, the form says so, so contact Uppsolut.

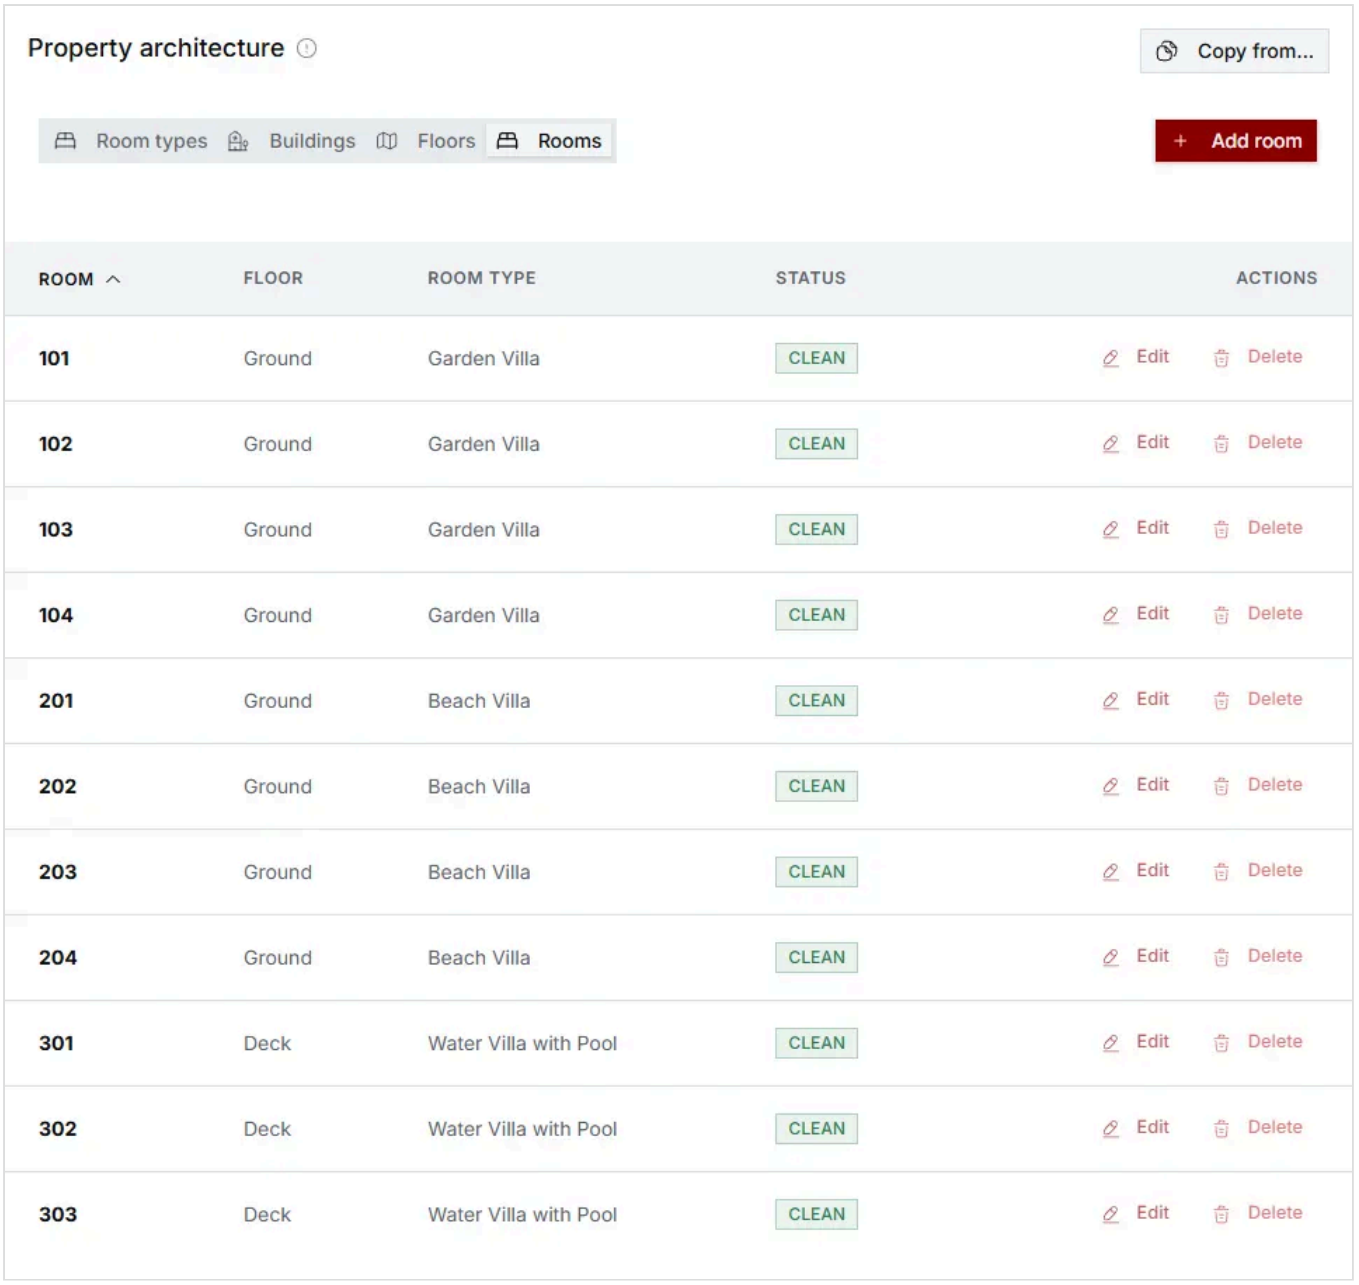

3. Buildings and floors

On the **Buildings** tab, add each building or wing (**Add building**, then a **Building name**, e.g. Beachfront). A single-building property still needs one, e.g. Main Building. On the **Floors** tab, add its floors with **Add floor**: choose the building, then the **Floor name/number**(e.g. Ground, 1st Floor). Always pick a building; a floor can't be saved without one.

4. Rooms

On the **Rooms** tab, choose **Add room** for each room:

Field	Notes
Room number / name	Unique at the property, e.g. 201.
Room type	What the room is sold as.
Building, then Floor	Required for a physical room.
Room features	The room type's features are shown as fixed. Add any this room has on top, such as a connecting door.

New rooms start as **Clean**. A room can't be put on an inactive room type. For a room closing for good, set it out of service.

Housekeeping

Require inspected room at check-in (off by default): when on, a guest can only be checked in to a room a supervisor has marked **Inspected**. When off, only out-of-order and out-of-service rooms block check-in, and a dirty room gives a warning. The switch saves as soon as you change it.

Another property?

Copy from… on Property architecture copies room types with their features, and on Room features the three lists. Buildings, floors and rooms are physical, so each property adds its own.

Step 6 — Rates & packages

What a night costs, on which rate plans, and what is included: breakfast, dinner, transfers. Your revenue manager should own this step.

> **TWO PLACES**
> Rates are set up in two places. In the Hub, **Controls › Revenue** has the Allocation calculation choice and Meal Plans. Rate plans, allocations and prices are day-to-day revenue work, so they are on the property dashboard under **Finance › Revenue**. Both need the **Revenue** permission to save.

The building blocks

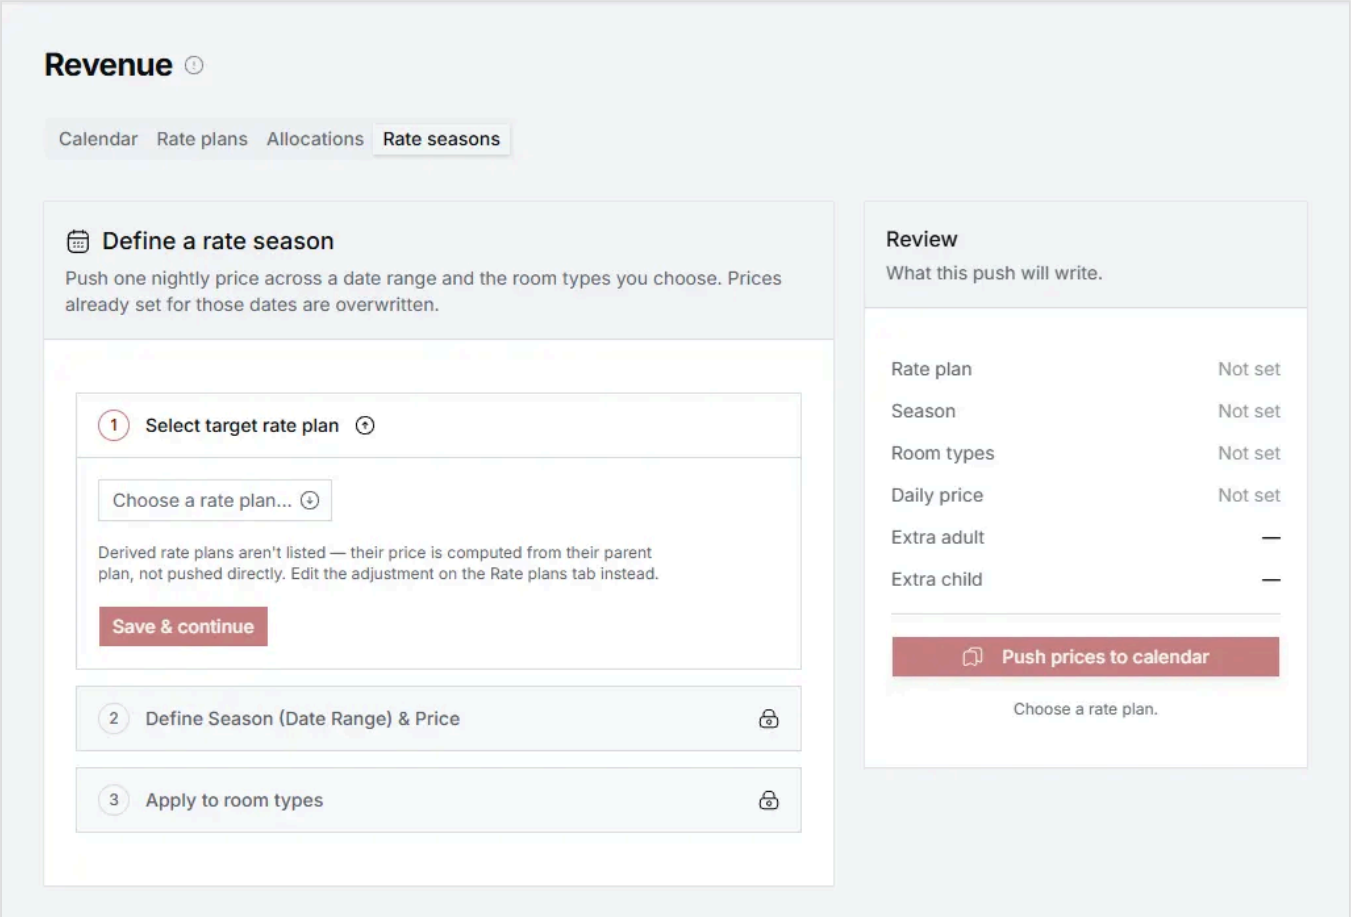

Block	What it is	Example
Price calendar	A price per room type, per night, per rate plan, plus extra-adult and extra-child prices.	Beach Villa, 1 Dec, BAR: 370
Rate plan	A way of selling a room, with its own prices (or prices derived from another plan).	BAR, Non-Refundable, Corporate
Base Rate	The locked rate plan every property has. Its prices are the fallback for every plan.	BASE
Allocation	A priced, per-person extra that posts at night audit.	Breakfast 25 per adult, 12 per child
Meal plan	A named bundle of allocations the guest chooses.	Half Board = Breakfast + Dinner

1. Price the Base Rate

Where: Dashboard › Finance › Revenue › Rate seasons · **Who:** Revenue

> **ALL PRICE CHANGES ARE MADE HERE**
> The **Calendar** tab only shows prices; it never edits them. To change a price, use Rate seasons — or pick days on the calendar and choose **Update prices**, which opens Rate seasons already filled in.

Do this first. When a night has no price on the booked plan, night audit falls back to the Base Rate, and when the Base Rate has no price either, the night posts **zero**. Price the Base Rate for at least a year ahead.

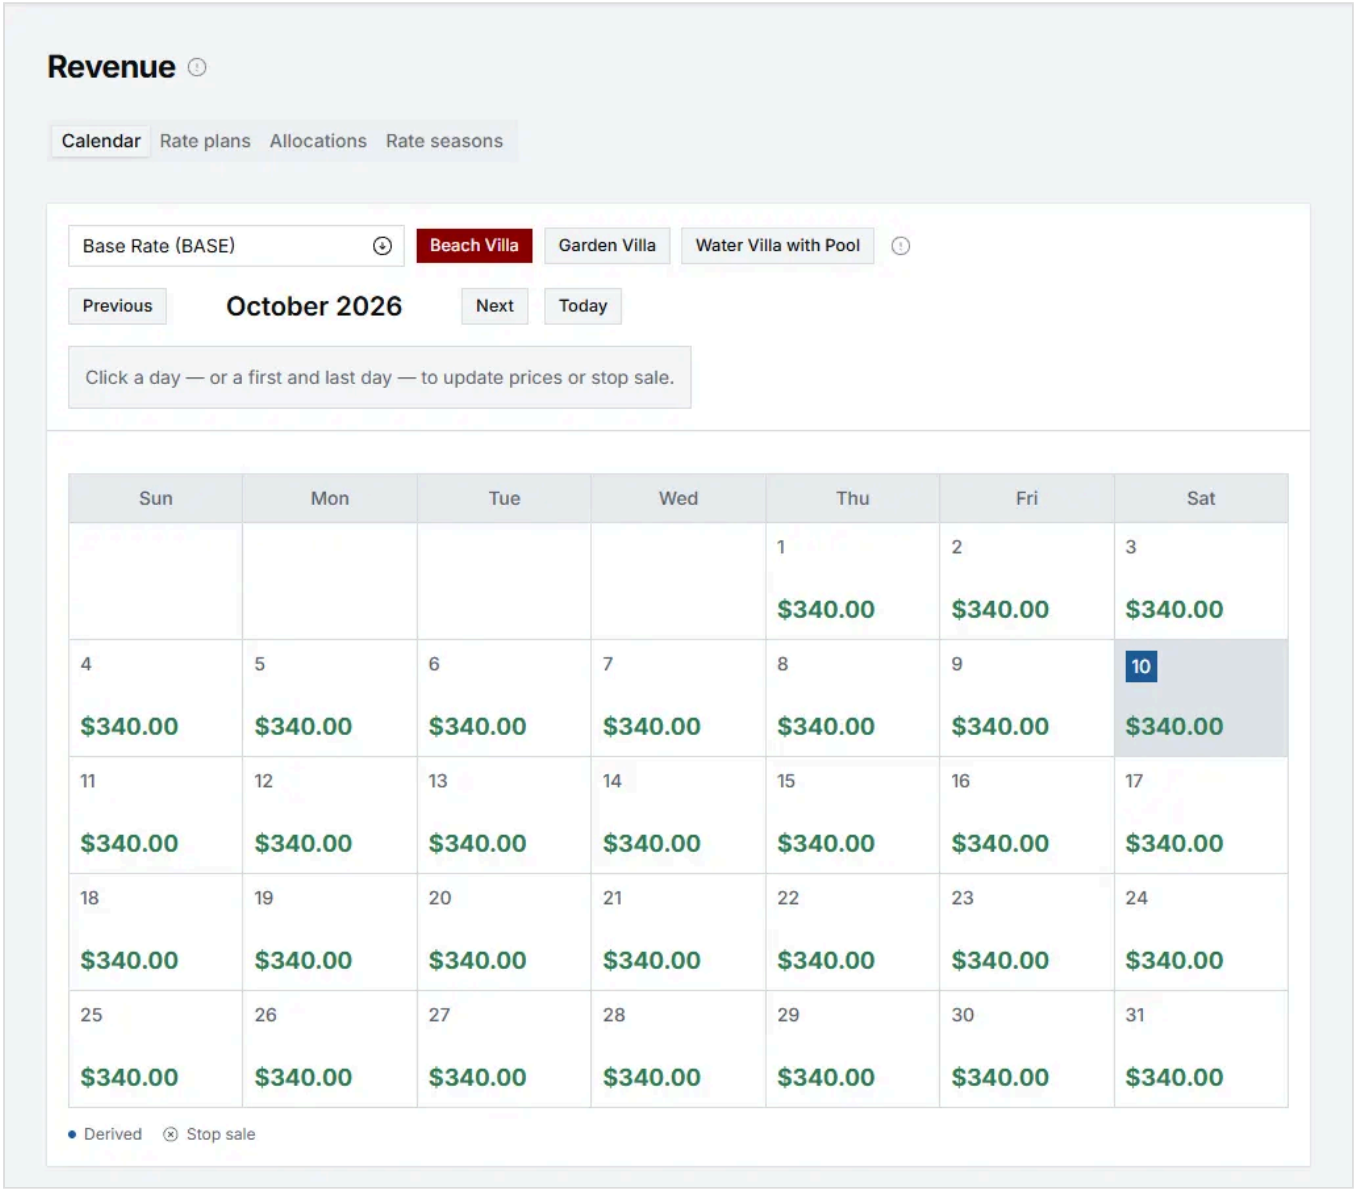

The form has three steps. Each opens only after the one before it is saved, so you fill them in order:

1. **Select target rate plan**: Base Rate. Choose **Save & continue**.
2. **Season**: the first and last night (both get the price). **Daily Price**: per room per night, at the room type's base occupancy. Optionally the **Extra Adult** and **Extra child price**. Choose **Save & continue** (it stays grey until the season and price are filled in).
3. **Apply to room types**: tick the room types this price is for.
4. Check the **Review** panel and choose **Push prices to calendar**.

A finished step folds up to a one-line summary; click it to change it.

Repeat for each season and each group of room types that shares a price. A push overwrites prices already set for those dates, so enter seasons from the broadest to the most specific: the whole year first, then peak weeks on top.

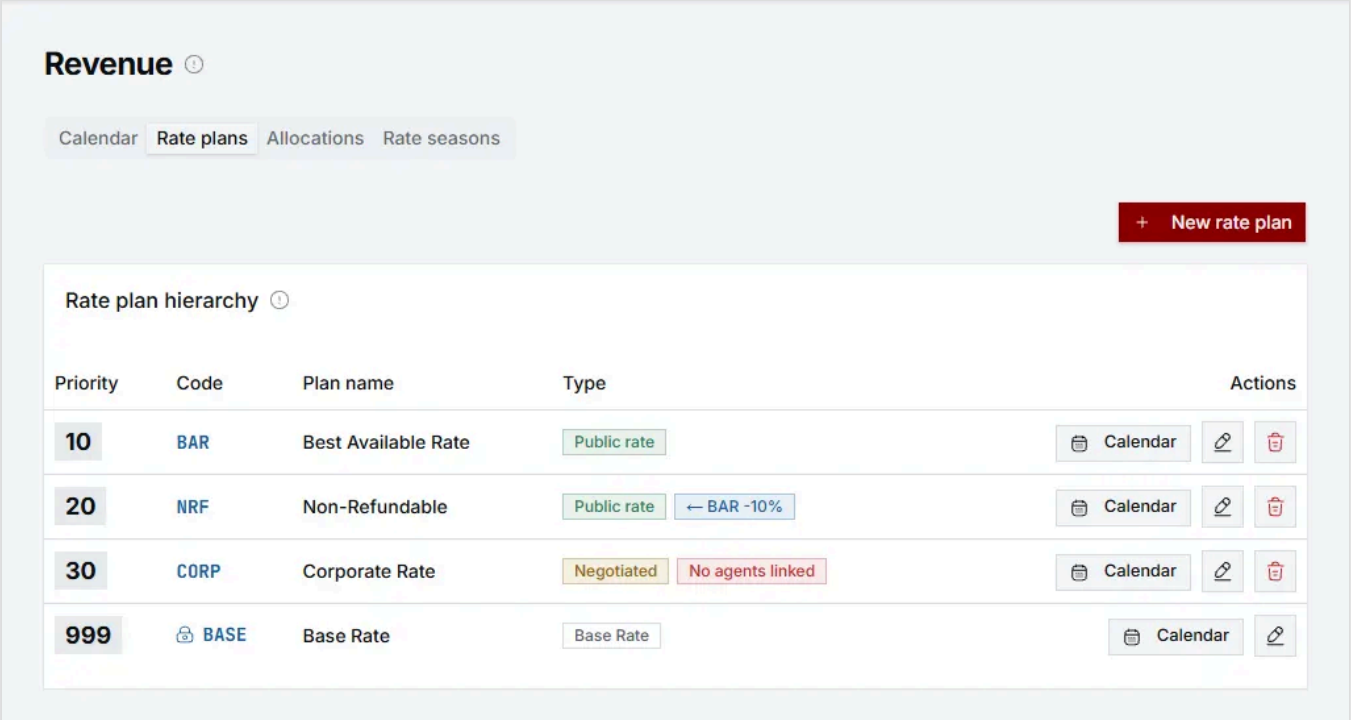

To check your prices, open the **Calendar**tab, the first tab of Revenue: a view-only month per room type that opens on the Base Rate, with a drop-down to look at another rate plan. A plan's own **Calendar** button on the Rate plans tab opens the same view fixed to that plan. Each day shows its nightly price; hover a day for the extra adult and child prices. **NA** means that plan has no price of its own for the night — price it in Rate seasons. (Night audit would still fall back to the Base Rate for such a night, so keep the Base Rate priced.) A small dot marks a price derived from a parent plan, and days closed with **Stop sale** are marked **Closed**.

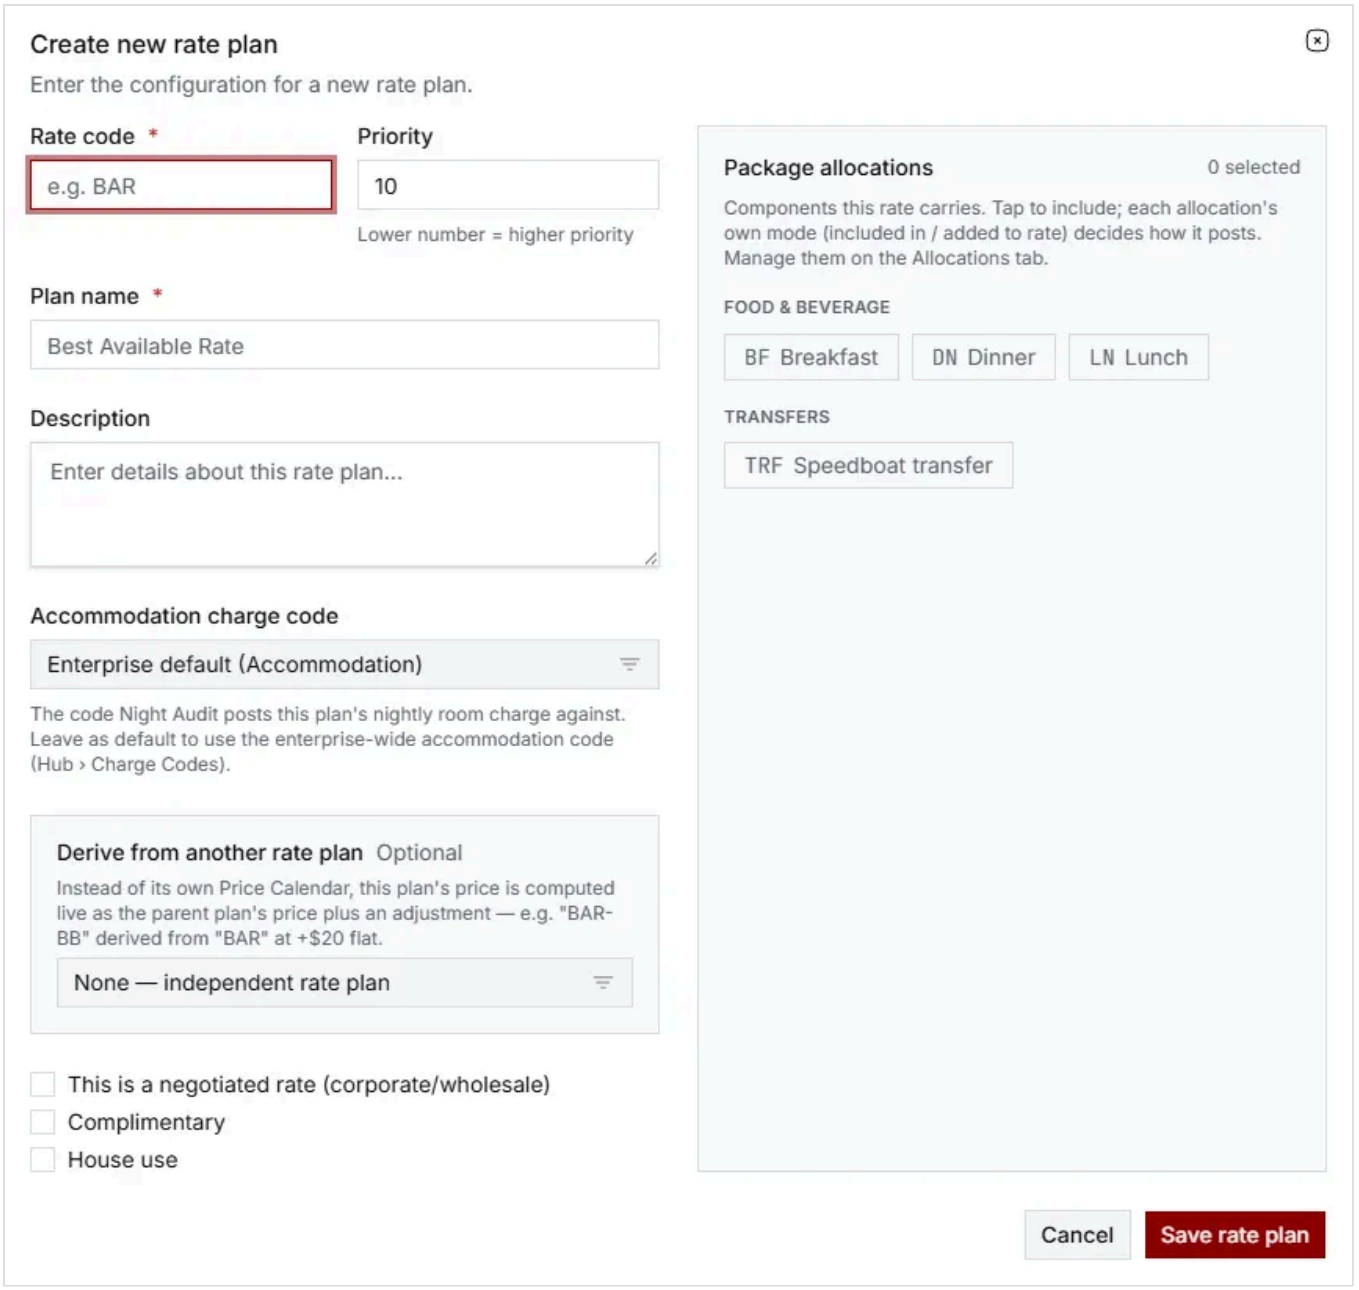

To change prices from the calendar, click a day (or a first and last day) and choose **Update prices**: Rate seasons opens with the plan, room type and dates already filled in, and brings you back to the calendar once the prices are pushed. **Stop sale** in the same bar closes those dates for the room type — see Price calendar and stop sale.

2. Rate plans

Where: Dashboard › Finance › Revenue › Rate plans · **Who:** Revenue

Choose **New rate plan**:

Field	Notes
Rate code	e.g. BAR. Unique at the property. BASE is reserved.
Priority	Lower numbers are listed first when staff pick a rate.
Plan Name / Description	What staff see, e.g. Best Available Rate.
Accommodation charge code	Leave on the default (1000) unless finance wants this plan's room revenue on its own code.

Field	Notes
Derive from another rate plan	Optional. The plan's price follows the parent's, adjusted by a percentage or flat amount, e.g. -10%. A derived plan has no prices of its own and can't itself be a parent.
Negotiated rate	For corporate and wholesale rates. It can only be booked for a company or travel agent linked to it on their profile (Negotiated rates section).
Complimentary / House use	Labels for reporting. These nights are still charged normally.
Package allocations	Extras included in this plan. Used only in Rate plan level mode (see step 4).

After saving an independent plan, give it prices, either with Rate seasons (choose the plan as the target) or from its **Calendar**. The **Base Rate**can't be deleted or renamed; only its charge code and package allocations can change.

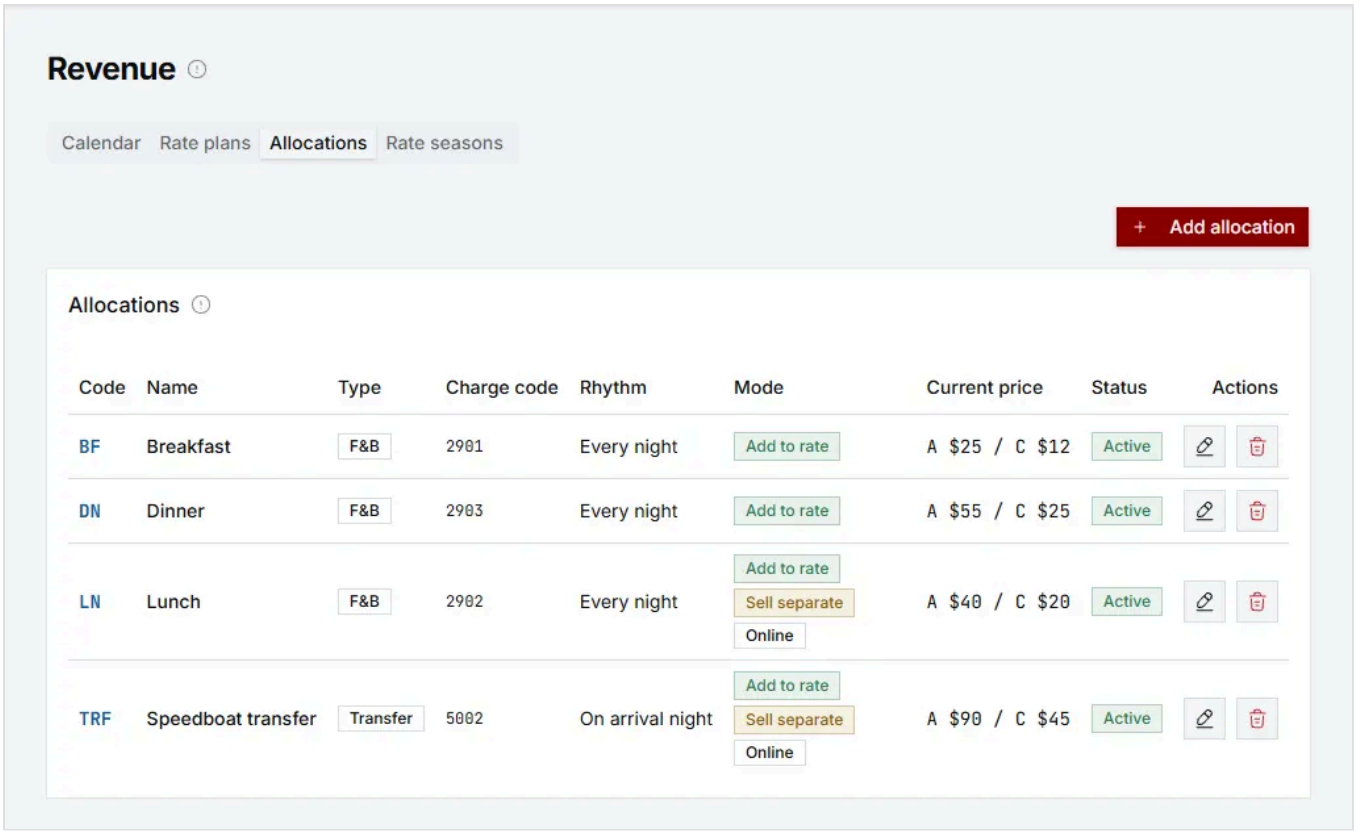

> **HOW A NIGHT IS PRICED**
>
> A manual rate entered on the reservation, if any.
>
> Otherwise the booked plan's price for that room type and night (for a derived plan: the parent's price plus the adjustment).
>
> Otherwise the Base Rate's price (plus the adjustment, for a derived plan).
>
> Otherwise zero.

Deleting a plan deletes its prices. Once reservations use a plan, its code can't be changed and it can't be deleted.

3. Allocations

Where: Dashboard › Finance › Revenue › Allocations · **Who:** Revenue

Allocations are the priced components of a package: meals, transfers, spa credits. They need a revenue charge code, so create the codes first (e.g. *Meal Plan — Breakfast*, *Speedboat Transfer*) in step 3. Choose **Add allocation**, fill in the form and choose **Create**:

Field	Notes
Code / Name	e.g. BF / Breakfast. Code 2–10 characters, unique.
Type	F&B, Transfer, Spa, Excursion or Other.
Charge code	Where its revenue posts.
Posting rhythm	Every night, On arrival night (e.g. an arrival transfer) or On departure night (the stay's last night).
Rate behaviour	Add to rate posts it on top of the room price. Include in rate takes it out of the room price, so the guest pays the same total but the revenue is split to the allocation's code.
Sell separately	Allows it to be sold on its own, e.g. as a paid extra on your website.
Pricing	Adult and child price per posting, from a date (and optionally to a date). Ranges must not overlap. Infants are never charged.
Active	Only active allocations can be linked.

An allocation posts nothing on nights no price range covers. Once used on a reservation its code can't be changed and it can't be deleted, only made inactive.

Setting up another property? In the Hub, **Controls › Revenue** has **Copy allocations from…**: it copies allocations with their prices and charge codes. Anything this property already has is skipped, never overwritten.

4. Allocation calculation: meal plan or rate plan?

Where: Hub › Controls › Revenue · **Who:** Property Setup

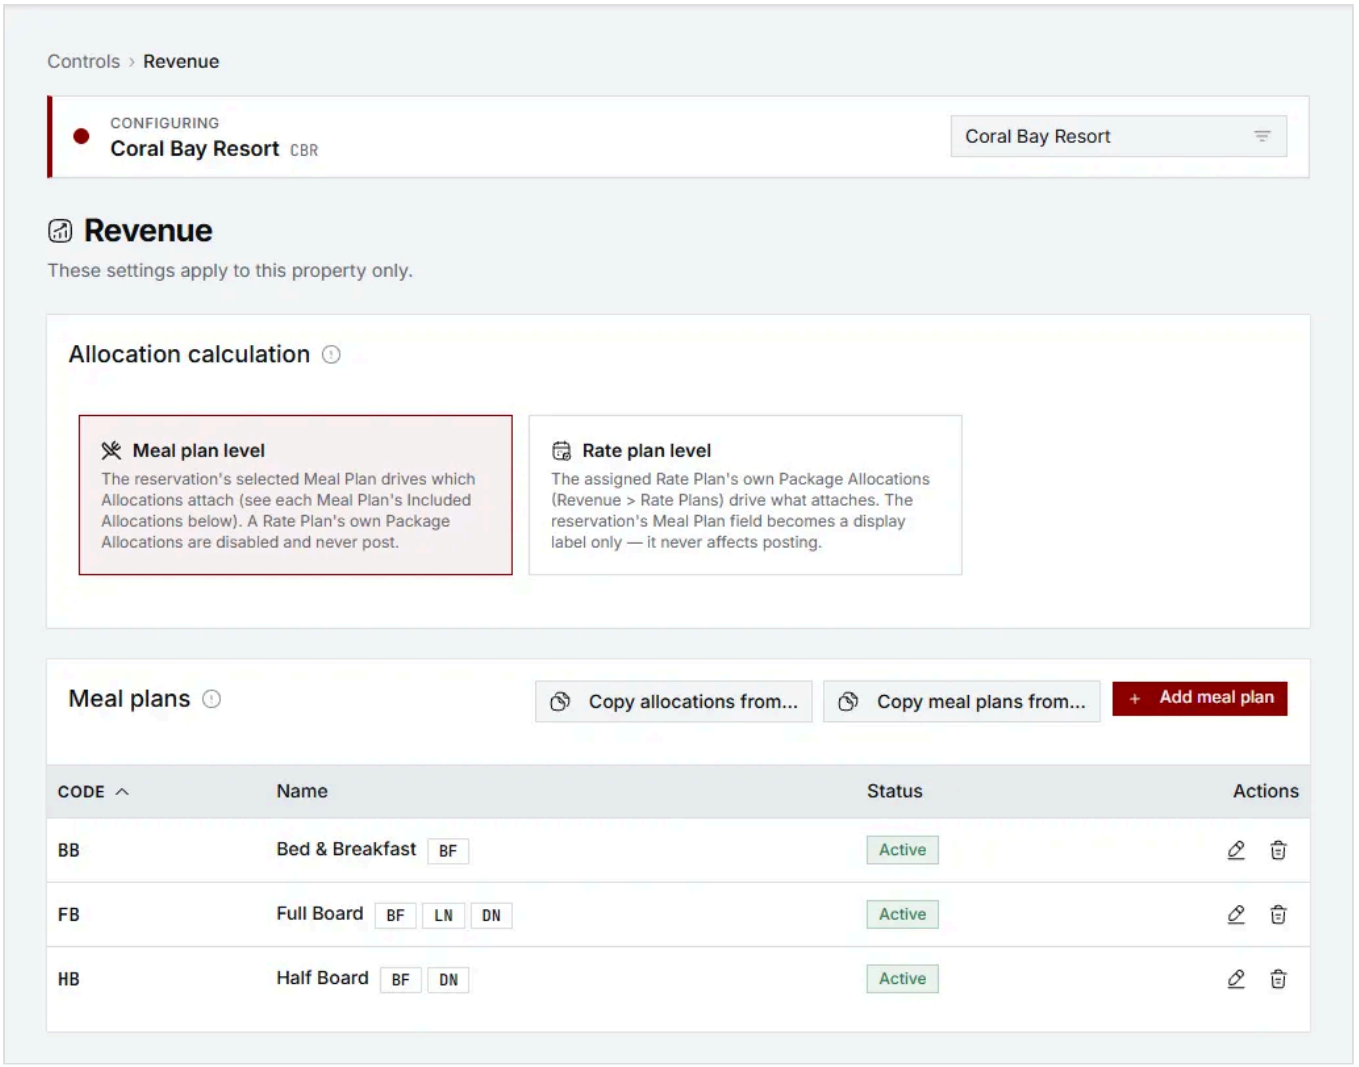

Decide how packages attach to a reservation. You choose one, and they never combine:

Mode	Choose it when
Meal plan level	Guests choose a board basis (BB, HB, FB) separately from the rate. The reservation's meal plan decides which allocations post. Rate plans' package allocations are ignored.
Rate plan level	Packages are built into rate plans (e.g. 'Honeymoon package'). The rate plan's package allocations decide; the meal plan is only a label.

It saves as soon as you click a tile. It applies to reservations created or changed from then on, and existing bookings keep what they had, so decide before you take bookings.

5. Meal plans

Where: Hub › Controls › Revenue › Meal plans · **Who:** Revenue

Choose **Add meal plan**: a **Code** (e.g. BB, HB, FB, AI), a **Name**, and tick the **Included allocations**, then **Create**. "Room only" needs no meal plan: it is built in. Once a reservation uses a meal plan, its code can't be changed and it can't be deleted; switch it inactive instead.

Copy meal plans from... copies meal plans from another property, with the allocations they include.

Step 7 — Reservations & numbering

How booking numbers look, where document numbering starts, and the lists the desk picks from on a reservation.

Booking number format

Where: Hub › Controls › Reservations · **Who:** Property Setup

Field	Notes
Prefix	Up to 12 letters, numbers, - _ or /, uppercased. Leave empty to use the property code and a dash (CBR-).
Number of digits	3–12, default 6. The running number is padded with zeros to this length.

With prefix `CB` and 6 digits, bookings are numbered `CB000001`, `CB000002` … The preview shows your real next booking number. Choose **Save format**. Existing bookings keep their numbers. Every booking uses this format, whether made at the desk, from a group, through the channel manager or on your website.

Reservation & housekeeping lists

The drop-downs on a reservation and on housekeeping tasks. They start empty:

Tab	Examples
Special requests	Early check-in, Late check-out, Baby cot, Honeymoon set-up.
Transport type (pickup / dropoff)	Speedboat, Seaplane, Domestic flight, Car.
Housekeeping requests	Turndown service, Extra towels, Extra bed.

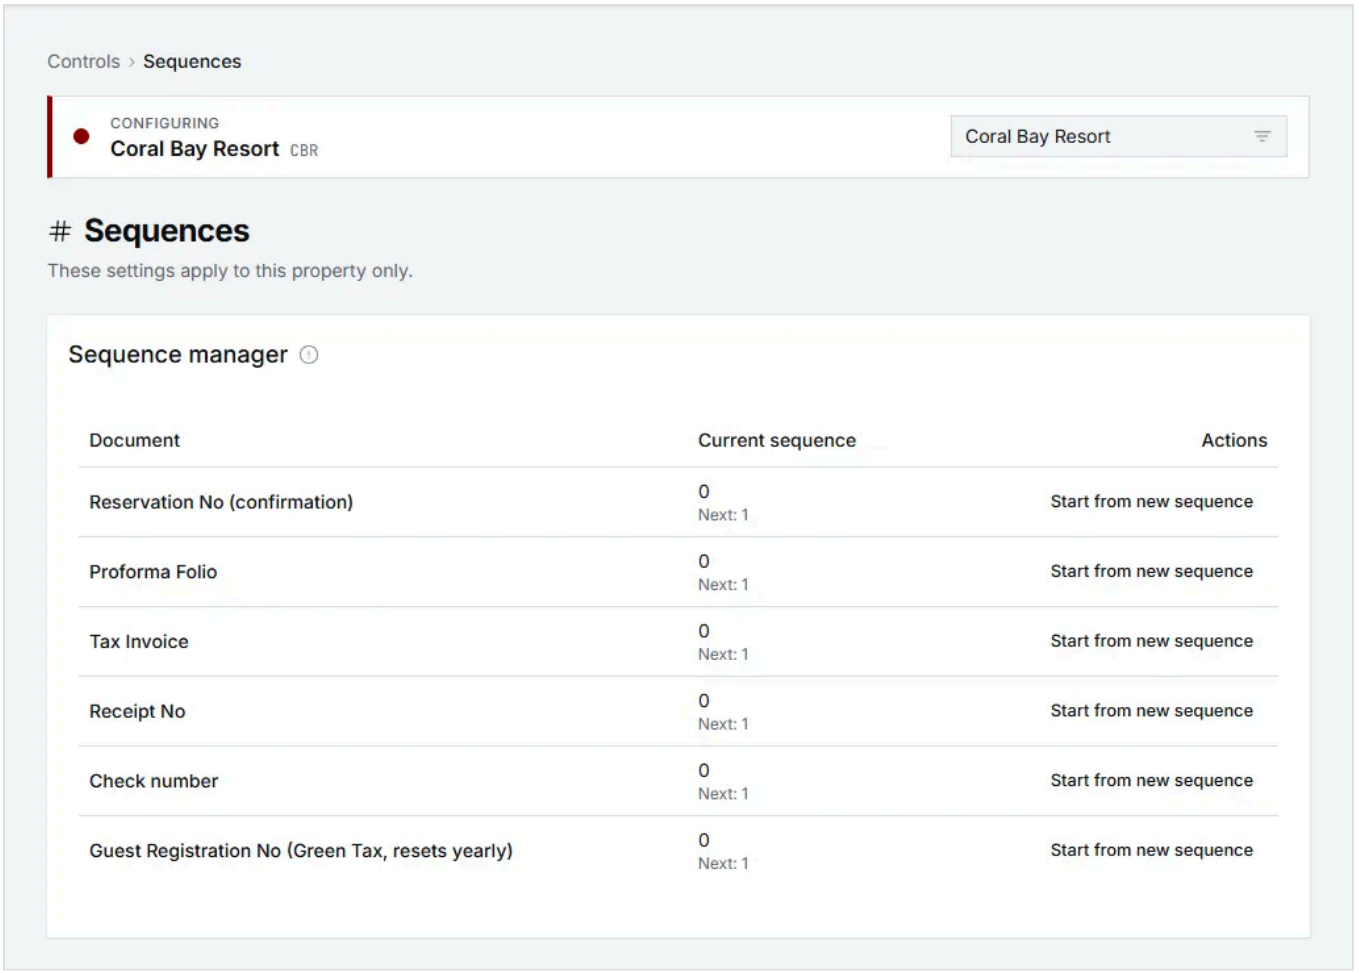

Add each with a **Code (internal)** and a **Display value**. The arrows set the order in the drop-down. The code can't be changed; a deleted entry comes back with **Show deleted** and **Restore**. Use **Copy from…**to take another property's lists.

> **WHERE ARE CANCELLATION AND DEPOSIT POLICIES?**
> Deposit, cancellation and no-show fees are on Finance › Deposit & fee rules. When a no-show is marked is on Night Audit. eRegistration is on Stationery › Reg. card. Travel agents and companies, and their negotiated rates, are profiles, created by the front office rather than in the Hub.

Sequences

Where: Hub › Controls › Sequences · **Who:** Property Setup

The running numbers behind your documents. Each shows the **last number issued**; the next document gets the one after.

Sequence	Numbers
Reservation No (confirmation)	Booking numbers, in the format above.
Proforma Folio	Proforma invoices.
Tax Invoice	Final tax invoices.
Receipt No	Payment receipts.
Check number	Folio postings. A charge and its Service Charge, GST and Green Tax share one number, as does each Night Audit night's room charge and packages.
Guest Registration No (Green Tax)	The Green Tax register number. It restarts at 1 every year.

A new property shows 0 everywhere, so numbering starts at 1. **Only change these before go-live**, and only to carry on from your previous system, for example so your first

invoice is 10501 after 10500. Choose **Start from new sequence**, enter the last number your old system used, and **Save**.

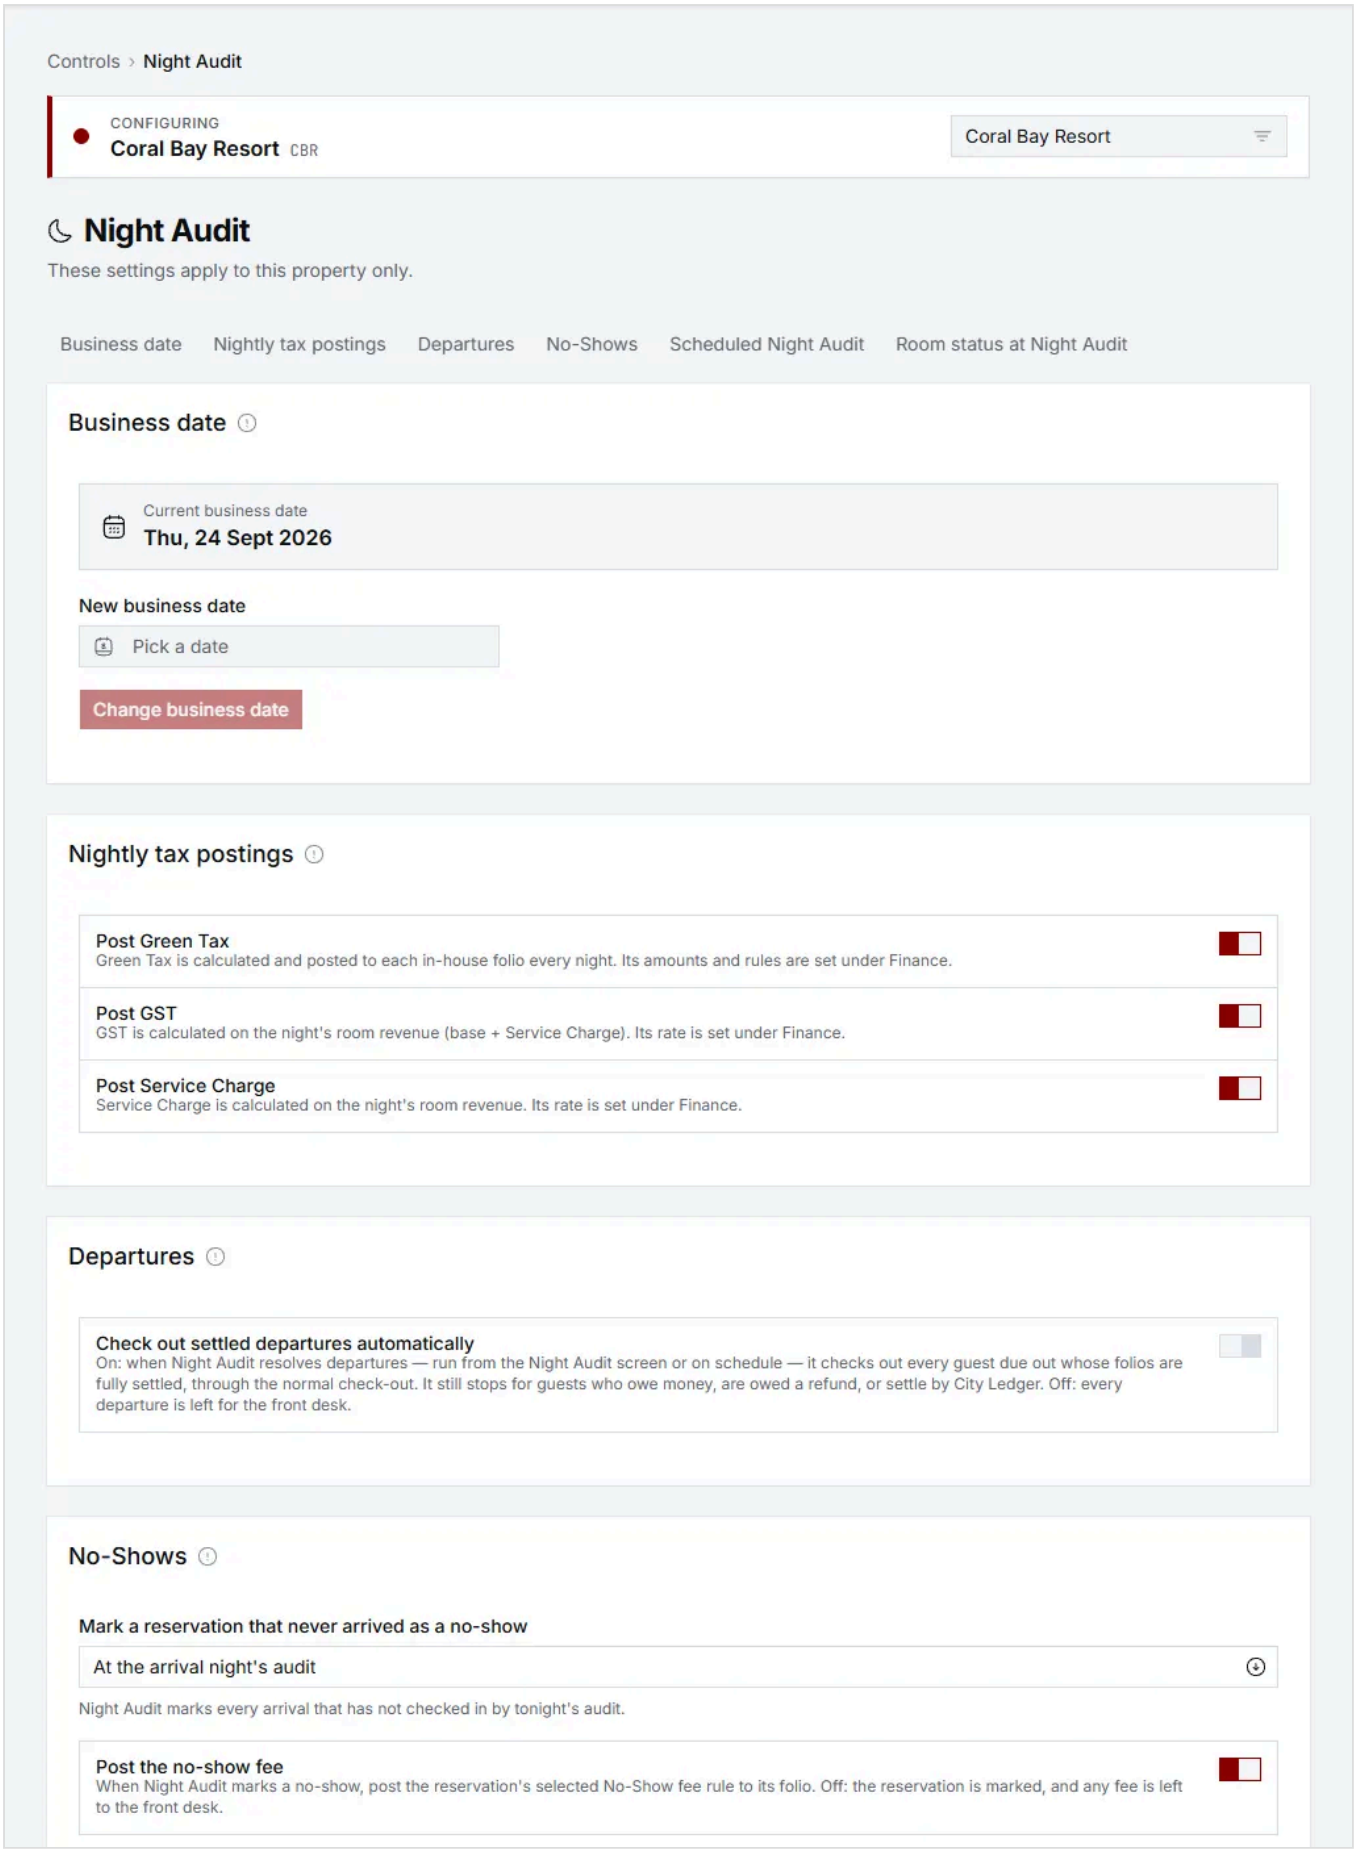

> **NUMBERS ALREADY ISSUED ARE PROTECTED**
>
> A counter can't be set below the highest number already issued; each row shows it. Guest Registration No is locked once this year's Green Tax register has numbers: correct it in the Green Tax register instead. Tax invoice numbers must be continuous for your auditors, so change counters only before go-live.

Step 8 — Night audit

Night audit closes the business day: it posts room charges and taxes, handles no-shows and departures, and moves the business date forward. Here you decide how it behaves.

Where: Hub › Controls › Night Audit · **Who:** Property Setup; Night Audit (update) to change the business date

Every setting saves as soon as you change it and shows a brief **Saved** tick, except the schedule, which has its own **Save** button, and the business date.

Controls › Night Audit
CONFIGURING
Coral Bay Resort CBR
Coral Bay Resort
Night Audit
These settings apply to this property only.
Business date
Nightly tax postings
Departures
No-Shows
Scheduled Night Audit
Room status at Night Audit
Business date
Current business date
Thu, 24 Sept 2026
New business date
Pick a date
Change business date
Nightly tax postings
Post Green Tax
Green Tax is calculated and posted to each in-house folio every night. Its amounts and rules are set under Finance.
Post GST
GST is calculated on the night's room revenue (base + Service Charge). Its rate is set under Finance.
Post Service Charge
Service Charge is calculated on the night's room revenue. Its rate is set under Finance.
Departures
Check out settled departures automatically
On: when Night Audit resolves departures — run from the Night Audit screen or on schedule — it checks out every guest due out whose folios are fully settled, through the normal check-out. It still stops for guests who owe money, are owed a refund, or settle by City Ledger. Off: every departure is left for the front desk.
No-Shows
Mark a reservation that never arrived as a no-show
At the arrival night's audit
Night Audit marks every arrival that has not checked in by tonight's audit.
Post the no-show fee
When Night Audit marks a no-show, post the reservation's selected No-Show fee rule to its folio. Off: the reservation is marked, and any fee is left to the front desk.

Business date

The date the property is trading on. It starts at your go-live date and night audit moves it forward one day at a time. It is not the same as the calendar date: after midnight, until the audit runs, the business date is still yesterday.

While the property is new (no reservations, bills, cashier shifts or audits yet), you can set **any** date: pick the **New business date**, choose **Change business date**and confirm. Set it to your real go-live day before you start. After the first activity it can only move forward, and only when a checklist on the page is all green: no guest in house, no earlier arrivals pending, no open cashier shift, and so on. Changing it signs the property's staff out.

Nightly tax postings

Switch **Post Green Tax**, **Post GST** and **Post Service Charge** on or off. The rates are on Finance. A property that doesn't charge a levy should switch it off here, rather than setting its rate to zero.

Departures

Check out settled departures automatically (off by default): when on, night audit checks out guests due to leave whose bill is settled. Leave it off if you want the desk to check every departure out.

No-Shows

Mark a reservation that never arrived as a no-show...	Use when
At the arrival night's audit (default)	Guests are expected on the day.
Hold one night for late arrivals, then mark	Guests often arrive after midnight, e.g. on late international flights.
Never automatically — the front desk marks no-shows	You want a person to decide every time.

Post the no-show fee charges the reservation's no-show rule. It needs an active no-show rule on Finance › Deposit & fee rules.

Scheduled Night Audit

Switch on **Run Night Audit automatically** and pick a **Time** between 22:00 and 06:00, property time, then choose **Save**. The audit then runs every night without anyone at the desk.

> A scheduled audit stops at any step that needs a person, for example a cashier drawer left open. The Hub Overview then warns that it didn't complete, and someone must finish it by hand. Most properties run the audit by hand for the first weeks, then switch the schedule on. If you mark no-shows at the arrival night's audit, schedule it after midnight.

Room status at Night Audit

Option	Effect on vacant rooms
Off — don't change statuses	Nothing changes.
Move one status down	Inspected becomes Clean, Clean becomes Dirty, Dirty stays Dirty.
Set all vacant rooms to a specific status	Every vacant room becomes Clean, Dirty or Inspected.

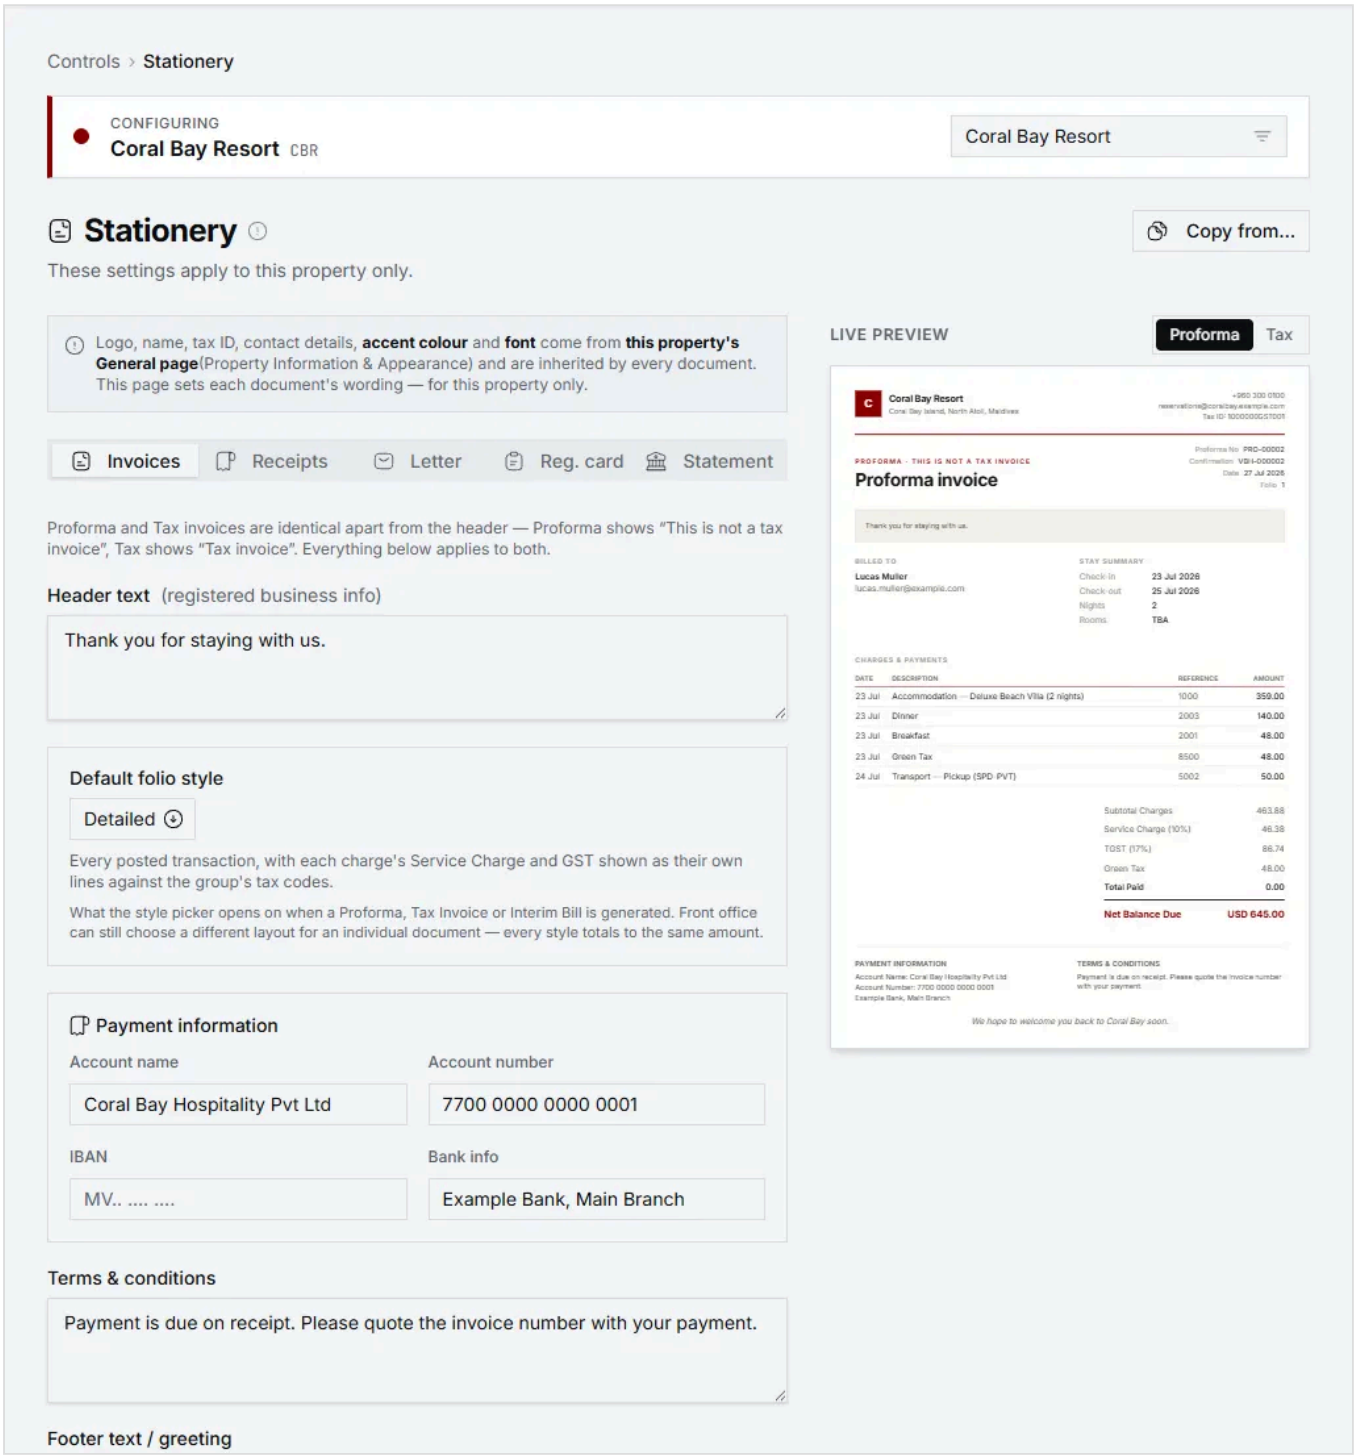

Occupied rooms always become Dirty at night audit.

Step 9 — Stationery

The wording on everything you print or email: invoices, receipts, confirmation letters, the registration card and statements. Plus eRegistration.

Where: Hub › Controls › Stationery · **Who:** Property Setup

The logo, name, address, tax ID, contact details, colour and font come from General. This page adds the wording. Each tab shows a live preview as you type. Choose **Save** at the bottom when done; **Reset** discards unsaved changes.

Invoices

Field	Notes
Header text	A line at the top of the invoice, e.g. 'Thank you for staying with us.'
Default folio style	How lines are shown: Detailed, Detailed with taxes merged, Summary by charge code, Summary by date, or Summary by check. Staff can pick another when printing.
Payment information	Account name, Account number, IBAN, Bank info. Printed so companies know where to pay. Until one is filled in, the Hub Overview warns.
Terms & conditions / footer text	Payment terms and a closing line.

Use the **Proforma / Tax** switch on the preview to see both invoice types.

Receipts, Letter, Statement

Receipts: footer and terms, shared by payment and currency-exchange receipts.

Letter: the policy text on reservation confirmation letters: check-in and check-out times, cancellation terms, what to bring.

Statement: footer and terms on company and debtor statements.

Registration card and eRegistration

Field	Notes
Registration card step	On: check-in includes the registration card. Off: it is skipped.
Welcome / intro message	Shown at the top of the card.
Terms & conditions	What the guest signs to.
Allow eRegistration links	On: staff can send guests a link to fill in their registration before arrival. The desk still checks it at check-in.

Field	Notes
Link validity (hours)	1–720, default 72.
Guest email message	The text of the email that carries the link.

> Sending eRegistration links and confirmation letters by email needs the enterprise's outgoing email to be set up.

Setting up another property? **Copy from…** at the top copies all this wording from a property you have already configured.

Excursions

The trips and activities you sell: what each costs, when it departs and how many seats it has. Available when your enterprise has the Excursions add-on.

Where: Hub › Controls › Excursions · **Who:** Property Setup

Before you start

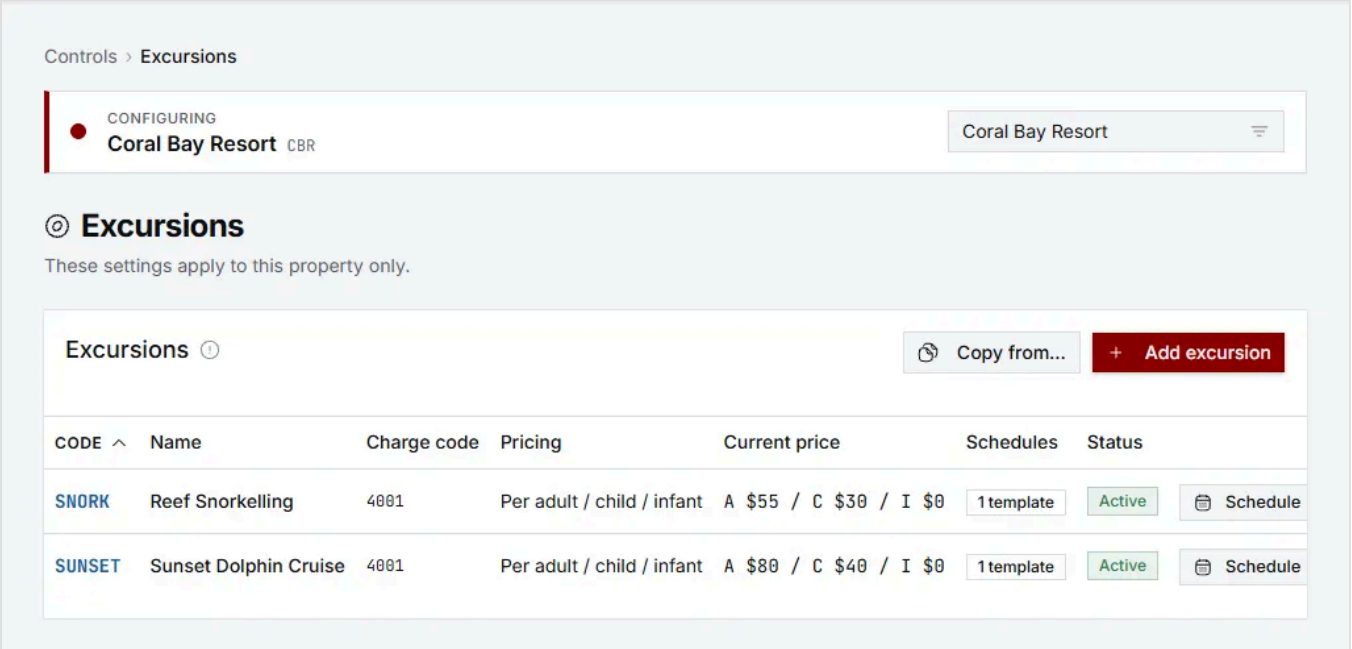

A revenue **charge code** for excursions, e.g. 4001 Excursion Tours, in a group that reports as Other or Transport (step 3). A new property has an empty Excursions group ready for it.

An **outlet** for excursions (step 4), linked on **Charge Codes › Excursion outlet**. No excursion can be booked until it is.

1. Add an excursion

Choose **Add excursion**, fill in the form and choose **Create**:

Field	Notes
Code / Name	e.g. SNORK / Reef Snorkelling. Code 2–10 characters, unique.
Description	Shown to guests, including on your website.
Charge code	Where the revenue posts.
Cancellation cutoff (hours)	Default 24. Until this many hours before departure a booking can be cancelled freely; after it, cancelling needs a manager.
Pricing mode	Per adult / child / infant, or a Flat price per booking (e.g. a private charter).
Pricing	One or more date ranges with their prices. Leave the last range's end date empty to keep it running. A departure with no price range covering its date can't be booked.
Active	Only active excursions can be booked.

2. Add a schedule

Choose **Schedule** on the excursion, fill in when it runs and choose **Add schedule**:

Field	Notes
Days	The weekdays it runs, e.g. Mon, Wed, Fri.
Departure time / Meeting time	Meeting time is optional.
Meeting point	Optional, e.g. Main Jetty.
Capacity	Seats per departure. Never exceeded: bookings stop when it is full.
Min. headcount to run	Optional. The fewest guests the trip runs with. Staff see how close each departure is, and your website shows whether a departure is guaranteed. Nothing is cancelled automatically: the desk decides.

Each schedule has an on/off switch: an inactive schedule is skipped when departures are generated, for example out of season. Deleting a schedule asks for confirmation and leaves departures already generated in place.

3. Generate departures

A schedule is a template. Bookings are made on **departures**, the actual trips on actual dates. Under **Generate departures**, pick a **Through date** and choose **Generate**: departures are created from today up to that date. It is safe to run again later to extend the calendar, and existing departures are never touched.

> Changing a schedule later does not change departures already generated. Change those individually from the Excursions screen on the dashboard.

Selling online

To sell excursions on your own website, see Online booking.

Another property?

Copy from...copies excursions from another property, with their prices, charge code and schedules. Anything this property already has is skipped, never overwritten. Departures and bookings are never copied: generate this property's own departures afterwards. Copied excursions start unpublished online.

Spa

Treatments, the therapists who give them, the rooms they happen in, and the spa's booking rules. Available when your enterprise has the Spa add-on.

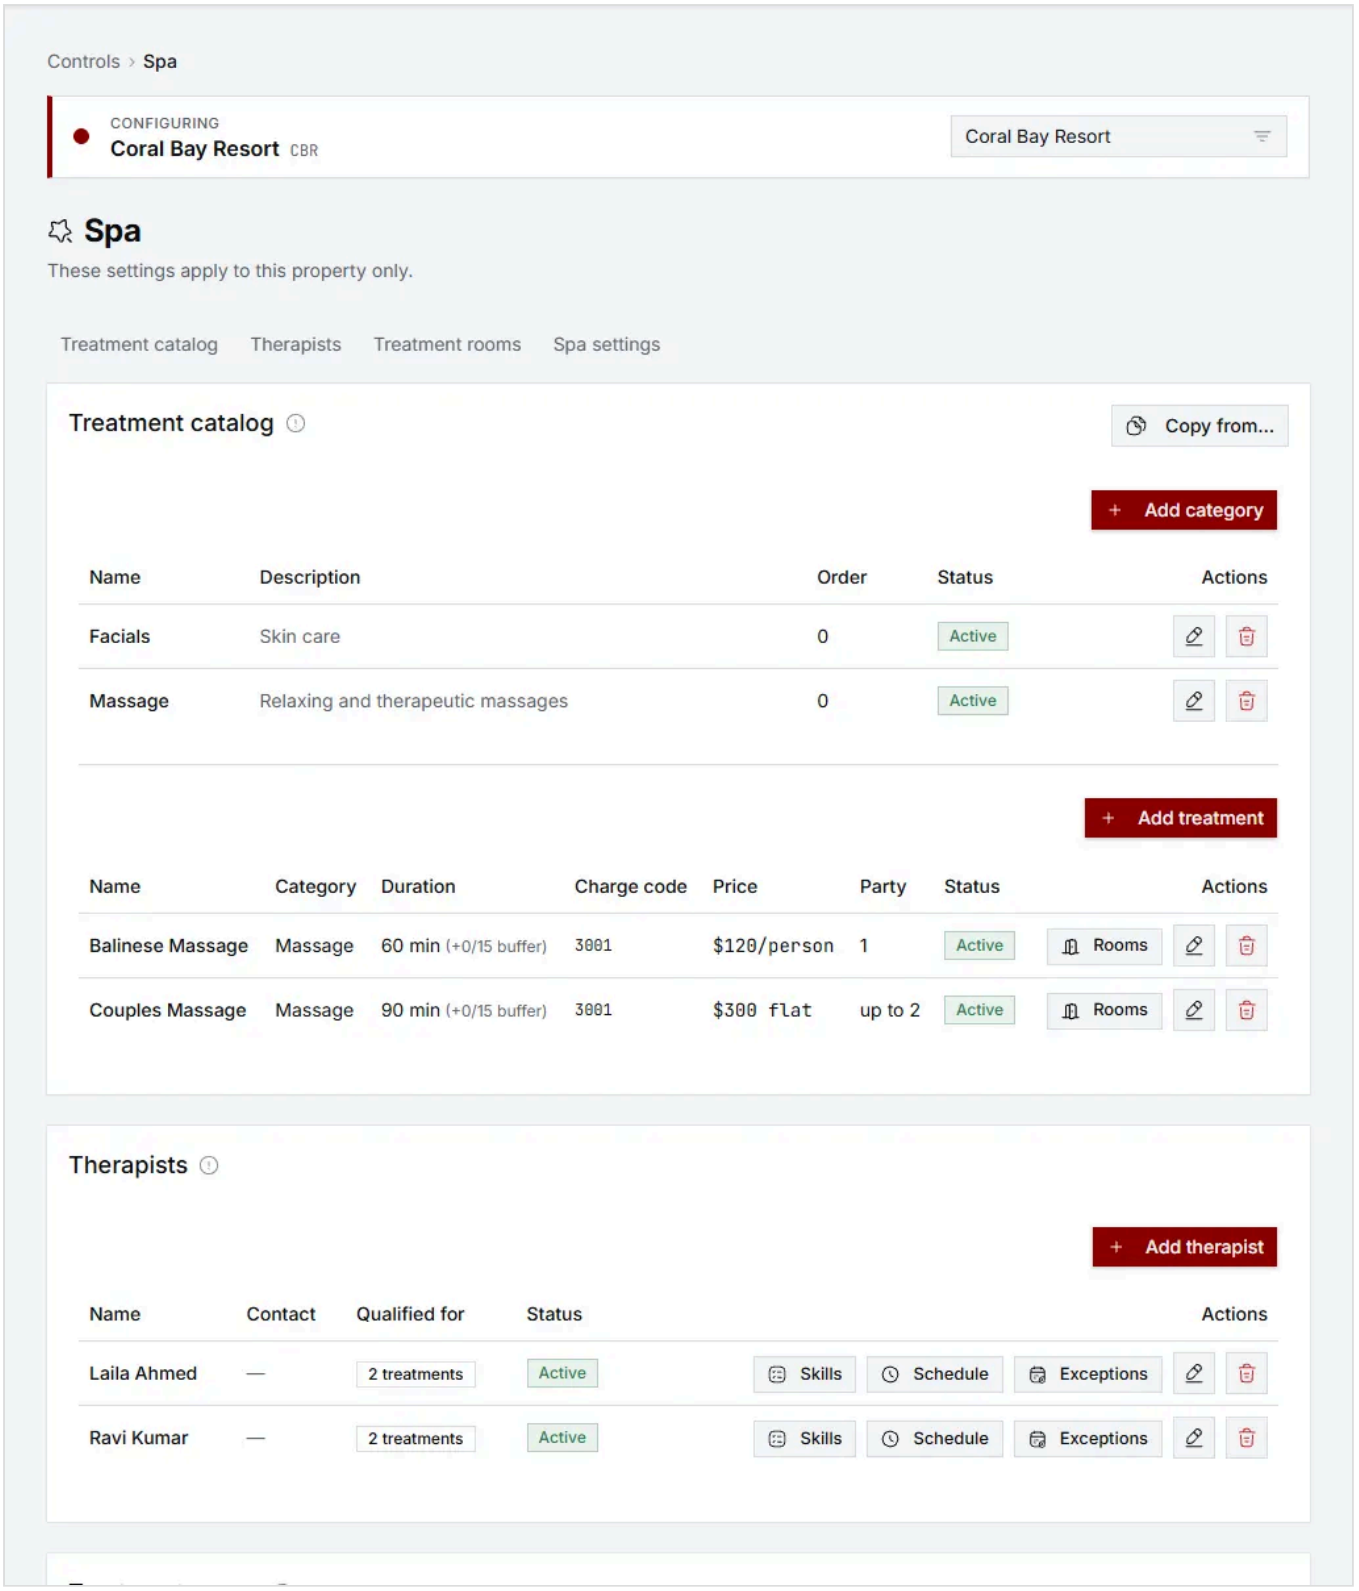

Where: Hub › Controls › Spa · **Who:** Property Setup

Before you start

A revenue **charge code** for treatments, e.g. 3001 Spa Treatments, in a group that reports as Other (step 3).

A **Spa outlet** (step 4), linked on **Charge Codes › Spa outlet**.

The spa engine only offers a time when a qualified therapist and a suitable room are both free, so all four parts below matter.

1. Treatment catalog

Categories

Choose **Add category** (e.g. Massage, Facials, Couples), then **Create**. Treatments need a category first.

Treatments

Choose **Add treatment**, fill in the form and choose **Create**:

Field	Notes
Name / Category / Description	What guests see.
Duration (min)	The treatment itself, default 60.
Prep buffer / Cleanup buffer (min)	Room time before and after, pre-filled from Spa settings. The room is blocked for the whole time.
Charge code	Where the revenue posts.
Max participants	1 for individual treatments; 2 or more for couples or group sessions.
Pricing mode	Per person (times party size), or Flat package price.
Pricing	Date ranges with a price, like excursions.
Bookable for in-house guests / walk-ins	Who can have it. Treatments sold on your website must allow walk-ins.
Active	Only active treatments can be booked.

Use **Rooms** on a treatment to limit it to certain rooms and mark a preferred one. With none ticked, any active room large enough for the party can be used.

2. Therapists

Choose **Add therapist**: name, gender (guests can ask for a male or female therapist), optional phone and email, and **Bookable**. A therapist doesn't need a login. Choose **Create**. Then, on each therapist:

Button	What to set
Skills	Tick each treatment they are Qualified for, and Preferred where they are your first choice. Only qualified therapists are offered.
Schedule	Their working hours per weekday, from an Effective From date. Saving replaces the whole week.
Exceptions	Day off, leave, training, sick or unavailable, for the whole day or between two times. Extended Hours adds working time on a date — even before opening or after closing, which opens up those times for that therapist's treatments.

3. Treatment rooms

Choose **Add room**: name, optional code and description, and **Capacity**, then **Create**. A room with capacity 2 can host couples treatments. Use **Closures** to block a room on a date for maintenance, cleaning, renovation or a private event.

Deleting a category, treatment, therapist or room asks you to confirm first.

4. Spa settings

Setting	Default	Notes
Opening / closing time	09:00 / 18:00	No treatment is offered outside these hours.
Slot interval (min)	15	How often start times are offered.
Require therapist / room at booking, Allow auto-assignment	On	Whether staff must pick, or the system may pick for them.
Charge timing	At booking	Post the charge when booked, or At treatment completion.
Cancellation cutoff (hours)	4	Cancelling after it needs a manager and applies the late-cancellation charge.
Default Prep / Cleanup Buffer (min)	0 / 15	Pre-filled on new treatments.

Setting	Default	Notes
Late cancellation / no-show charge	No charge	None, full price, a percentage (up to 100) or a fixed amount.
Require cancellation reason	On	Staff must give a reason when cancelling an appointment.
No-show grace period (min)	15	A booking can be marked no-show only this long after its start time.

Choose **Save**. Opening time must be before closing time. Until you save, the defaults apply.

> To sell treatments on your own website, see Online booking.

Another property?

Copy from…on Treatment catalog copies categories, treatments (with their prices, charge code and rooms), treatment rooms and Spa settings from another property. Anything this property already has is skipped, never overwritten. Therapists are each property's own staff, so they are never copied, and copied treatments start unpublished online.

Transportation

Guest transfers — the airport meet-and-greet, the speedboat or seaplane to the island, and island-to-island trips. Set up once per property: what you travel by, where, with whom, and what it costs.

Where: Hub › Controls › Transportation · **Who:** Property Setup

> Everything on this page belongs to **this property only**. Another property of the same group sets up its own routes, boats and prices; nothing is shared.

Before you start

Transportation is an **add-on**. Until it is enabled for your enterprise, Transportation does not appear in the Hub — ask your Uppsolut contact. Each property then switches it on below.

A revenue **charge code** for transfers, in a group that reports as Transport (step 3). If the property has none, **Load defaults** below creates one called Transportation.

Staff who meet guests at the airport need a user account to be chosen as an **airport rep** (People).

1. Switch it on

In the **Module** section:

Setting	What it does
Transportation is on	Shows Transportation in the dashboard menu and the Transportation card on reservations, and lets Night Audit post transfer charges. The reservation's simple Transport section (flight no., transport no., flight time) becomes read-only and shows what is booked here. Off: none of these, nothing is posted, and staff fill the simple section by hand.
Time to allow around a flight	Default 60 minutes. A boat leaving sooner than this after a flight lands, or reaching the airport later than this before take-off, is marked Needs attention. It only warns — nothing is ever refused.

Setting	What it does
Default charge code / Default tax	What a new rate starts with. Each rate can still choose its own.
A provider must be assigned…	When on, a transfer can't be marked Assigned, and a departure can't be Confirmed, until a provider is chosen.

Load defaults adds the usual Maldivian set-up — Speedboat, Seaplane, Domestic flight, Public ferry and Car / van, Velana International Airport (MLE) and the property itself as locations, and a Transportation charge code. It skips anything you already have.

Controls › Transportation

CONFIGURING

Transportation is on for this property — the board, the reservation panel and Night Audit posting

Time to allow around a flight (minutes)

60

A boat leaving sooner than this after landing, or reaching the airport later than this before take-off, is marked Needs attention.

Default charge code for new rates

5001 — Airport Transfer

Default tax for new rates

As the charge code

A provider must be assigned before a booking is Assigned or a departure is Confirmed

Save settings

Transport types

+ Add type

Code	Name	Mode	Flight details	Status	Actions
FRY	Public ferry	Ferry	—	Active	
SPB	Speedboat	Speedboat	—	Active	
SPL	Seaplane	Seaplane	Required	Active	

Locations

+ Add location

Code	Name	Type	Notes	Status	Actions
HOME	Coral Bay Resort	Resort	—	Active	
MAAF	Maafushi island	Island	—	Active	
MLE	Velana International Airport	Airport	Meet at the arrivals hall, hotel counter 12.	Active	
SPT	Seaplane terminal (Velana)	Seaplane platform	—	Active	

2. Transport types

How guests travel: a code, a name and a mode (Speedboat, Seaplane, Domestic flight, Ferry, Land, Other). Turn on **Needs flight details** for a seaplane or domestic flight: every transfer using it then asks for the airline, flight number and time.

3. Locations

Every place a transfer starts or ends: the airport, the seaplane platform, jetties, islands, resorts and guesthouses. Notes are a good place for the meeting point.

4. Routes

Field	Notes
Code / Name	e.g. MLE-SPB / Airport – resort by speedboat.
From / To	Two of your locations. For a route used both ways, enter it the arrival way round (airport → property); a drop-off travels it in reverse automatically.
Transport type	What it runs with.
Category	Airport transfer (each transfer shows the flight) or Local transfer (island to island, no flight).
Used for	Pickups, drop-offs or both.
Duration	Minutes. Counted when checking a drop-off reaches the airport in time.
Default departure times	e.g. 10:00, 14:00, 17:00. Suggested when booking, and used to create a day's departures in one click. Never binding.
Instructions	Shown on each transfer: where to meet, luggage rules.

5. Providers and vessels

A **provider** is who runs the transfer: your own fleet (Own) or an operator you book (Third party), with a contact and phone. Under it, add each **boat, seaplane or vehicle** with its

seats. Seats are used to warn when a departure has more passengers than fit — a warning only.

6. Rates

Field	Notes
Route	The route this price is for. A route with no rate is complimentary.
Applies to	Pickups, drop-offs or both.
Pricing	Per person (adult, child and infant prices, with the ages that count as a child), Per vehicle (price × vehicles) or Per trip (one price per transfer).
Valid from / to	Optional. Leave empty for a year-round price; add a dated rate for a season.
Only for transport type / provider	Optional. A seaplane operator's own price, for example.
Charge code / Tax	Where the revenue posts, and its tax: as the charge code says, the property's default (Service Charge + GST), or a custom tax profile.
Billable	Off = shown but never charged (included in a package).
Enabled	Off = not used for new transfers.

Prices are entered the way every price at the property is — including or excluding tax as set under Finance. When a transfer is booked the **most specific**enabled rate is used: a provider's own rate first, then a transport type's, then one for exactly that direction, then the newest season.

7. Who can do what

Roles are set on People, under the Transportation row:

Permission	Means
View	See the board, the airport rep and dispatch views, and export the report.
Create	Book and edit transfers.

Permission	Means
Update	Manage departures: create them, put guests on and off, change their status.
Delete	Billing: post or waive a transfer charge by hand, post a fee, set a price by hand.

Voiding a posted transfer charge also needs Cashiering (update), as for any folio correction. This page itself needs Property Setup.

Deactivate, don't delete

Anything already used by a transfer, rate or departure can't be deleted — use the deactivate button. Deactivated rows stay on old transfers and reports but aren't offered for new ones.

Using it

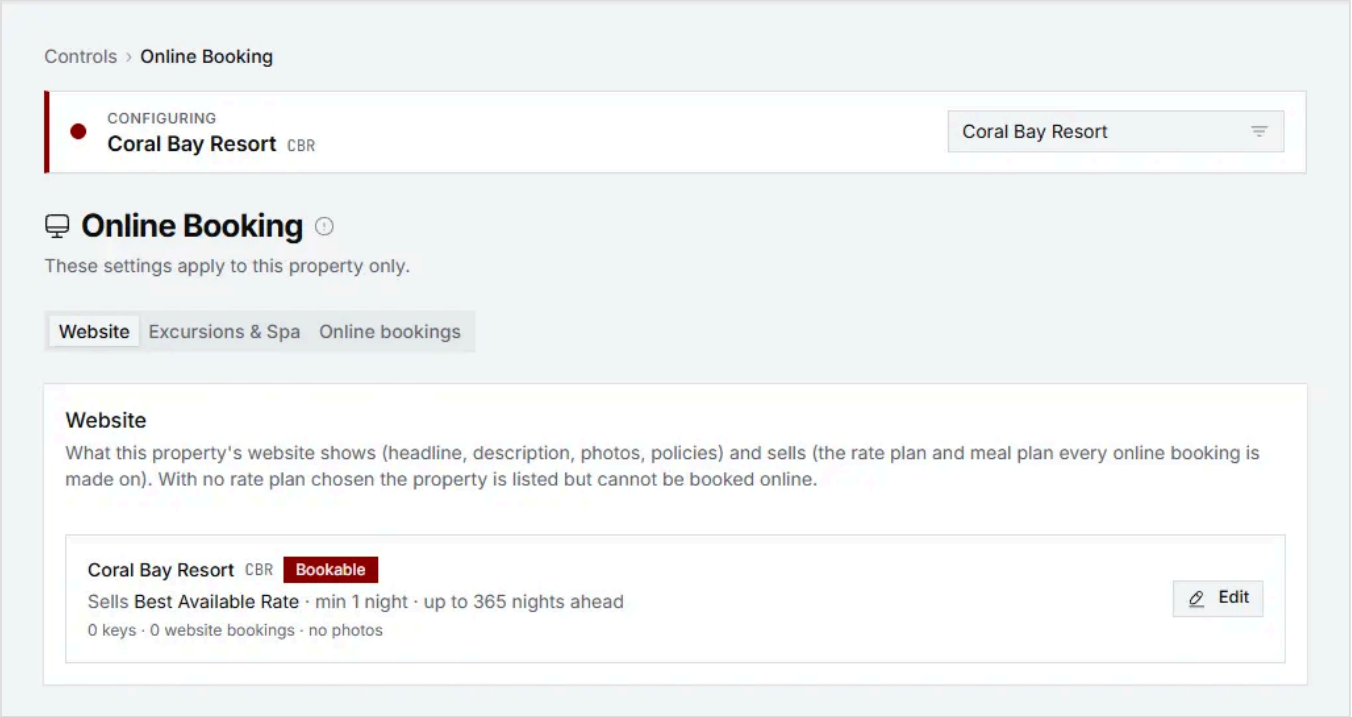

The day-to-day side — transfers, departures, the board and billing — is in the Transportation operations guide.

Online booking

Choose what your own website shows and sells for this property: rooms and, with the add-ons, excursions and spa treatments.

Where: Hub › Controls › Online Booking · **Who:** Integrations

Your website connects with a key created in Enterprise › Booking API Keys. This page decides what that key can sell *at this property*. Its tabs: **Website**, **Excursions & Spa** (with those add-ons) and **Online bookings**.

Website: rooms

The property's row shows a badge: **Bookable**, **Booking off**, or **No rate plan** (it can't sell until you choose one). Choose **Edit**:

Setting	Notes
Accept bookings from the website	The master switch for rooms.
Rate plan to sell	The plan whose prices the website shows. Required while online booking is on. Negotiated plans can't be sold online. Keep this plan's prices filled: nights without a price are not sold.

Setting	Notes
Let guests choose their meal plan / Meal plan	Offer your meal plans, or sell one fixed meal plan (or none).
Offer paid extras online	Offer allocations marked Sell Separately, e.g. a speedboat transfer. Tick which ones.
Minimum stay (nights)	1–30.
Booking window (nights ahead)	How far ahead guests can book, 1–730.
Note for the front desk	Added to every website reservation, e.g. 'Payment to be collected on arrival'.
Headline, Description, Photo URLs, Policies	What the website shows about the property. Policies are shown to guests, so write what you actually apply.

Choose **Save**. Only active, real room types (not pseudo) are offered, and a website can never overbook.

Excursions & Spa

One row per module. Its badge says **Selling online** when ready, or what is missing. Choose **Settings**:

Setting	Default	Notes
Accept bookings from the website	Off	The master switch for the module.
Hold while paying (minutes)	10	How long a place is kept while the guest pays on the website (5–60).
Book at least (hours ahead)	2	Online booking closes this long before the start.
Largest party per booking	10	Excursions only. Bigger groups book with you directly.

Setting	Default	Notes
Let guests ask for a male or female therapist	On	Spa only. Therapists' names are never shown.
Payment method for paid bookings	None	If the website takes payment, paid bookings are settled with this method. Without one, the website can only send bookings to be paid at the property.
Note for the desk / Policies		Added to every online booking / shown to guests. The cancellation deadline itself comes from the excursion's or spa's cutoff.

What is sold

Switch on each excursion or treatment the website may sell, and use the pencil to add the online description, what's included, and photo links. Prices, times and capacity come from the excursion and spa setup. A treatment not open to walk-in guests can't be sold online.

Online bookings

Everything the website booked, or tried to book: rooms, excursions and spa, with the guest, total, payment and status. Refused attempts show the reason, and holds that ran out show as expired. **Check payment**flags a paid amount that doesn't match the total.

> Website room bookings arrive as ordinary reservations, with remarks starting "Booked via website". How staff find and handle them is in Online bookings at the desk.

Connect your channel manager

Connect a property to your own Beds24 account, so its rooms and prices reach Booking.com, Expedia, Airbnb, Agoda and other online travel agencies, and their bookings arrive as reservations.

Where: Hub › Channel Manager (sidebar) · **Who:** Integrations (create to connect, update to change, delete to disconnect)

Beds24 is the channel manager: it holds the connections to the travel agencies. Uppsolut Stay talks to your Beds24 account for **one property at a time**, so each property you sell through agencies is connected on its own. The connection is made by you, with your own Beds24 account. You do not need to ask Uppsolut.

> **PREFER UPPSOLUT TO DO IT?**
> A property can instead be connected through Uppsolut's own Beds24 account. Contact Uppsolut and they will connect it for you. It then appears here already connected, and the mapping steps below are the same.

Before you start

- A Beds24 account with this property created in it, and its room types and rates set up there.
- This property's room types, rate plans and prices set up here first (step 5 and step 6).
- A Hub role with **Integrations** create permission for the property (the Admin role has it). A property team member can connect only their own property.
- Your licence includes channel connections for the property. If you are over the limit, the connection is refused with a message saying so.

1. Get an invite code and the property id from Beds24

These two things come from Beds24. Keep the Beds24 page open, because you copy both into Uppsolut Stay next.

The invite code

- Sign in to Beds24.

Open **Settings → Apps & Integrations → API** and choose **Invite codes**.

Tick the permissions Uppsolut Stay needs: read and write for **bookings** and for **inventory** (availability and prices), and read for **properties**.

Restrict the code to **this property** only, then generate it and copy the code.

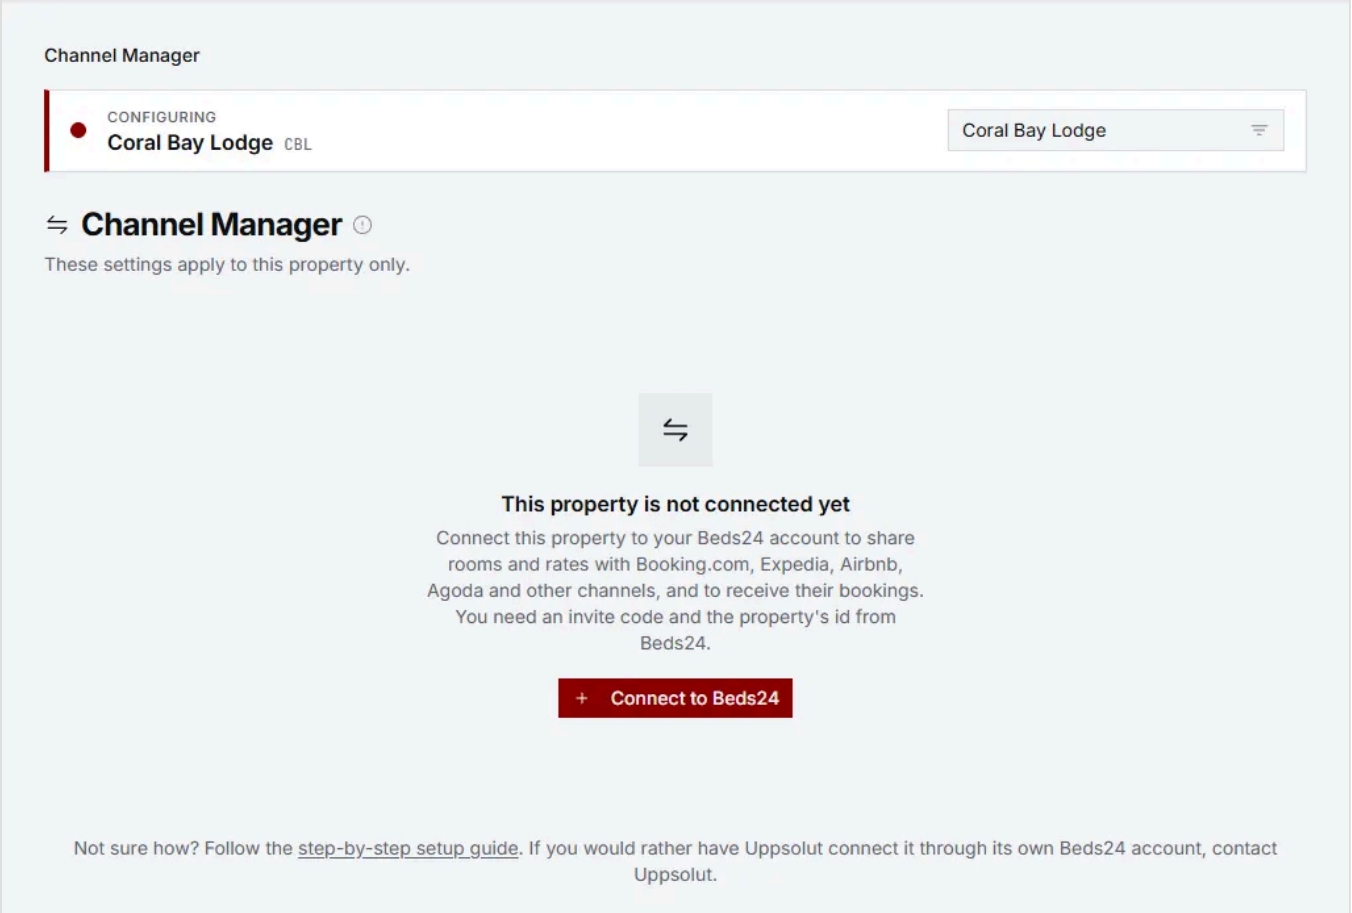

> **ONE CODE, ONE USE**
>
> An invite code works once. If you paste it and the connection then fails, or you want to connect another property, generate a new code. Generate one code per property.

The property id

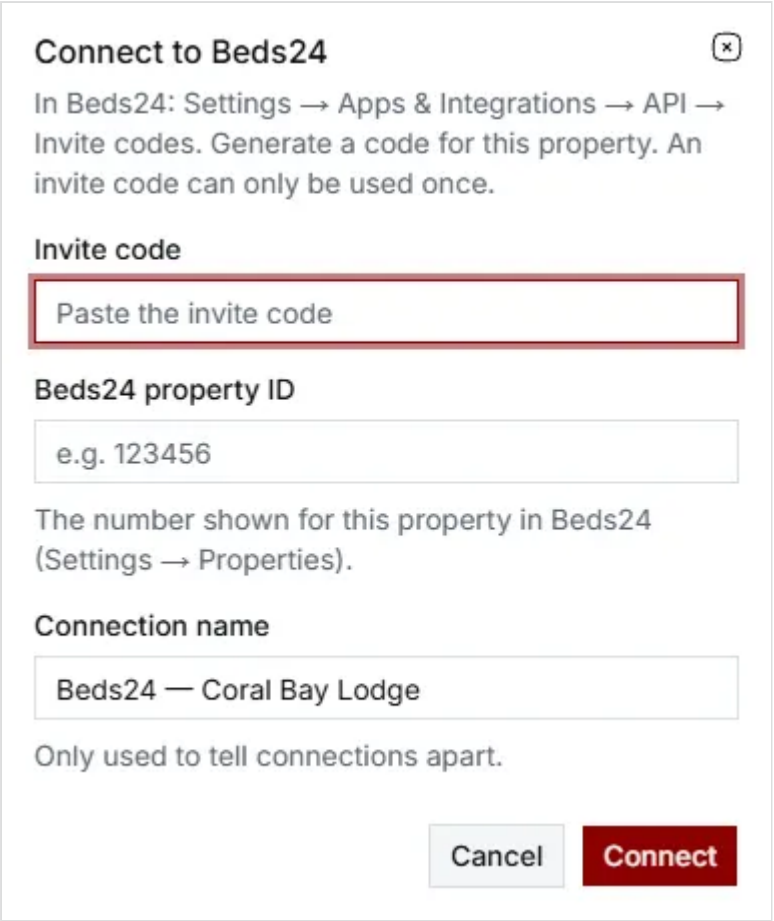

In Beds24 open **Settings → Properties**. The property's number is shown next to its name: that is the Beds24 property ID.

2. Connect the property

In the Hub choose the property in the sidebar, then **Channel Manager**. A property that is not connected shows **Connect to Beds24**.

Choose **Connect to Beds24** and fill in the form.

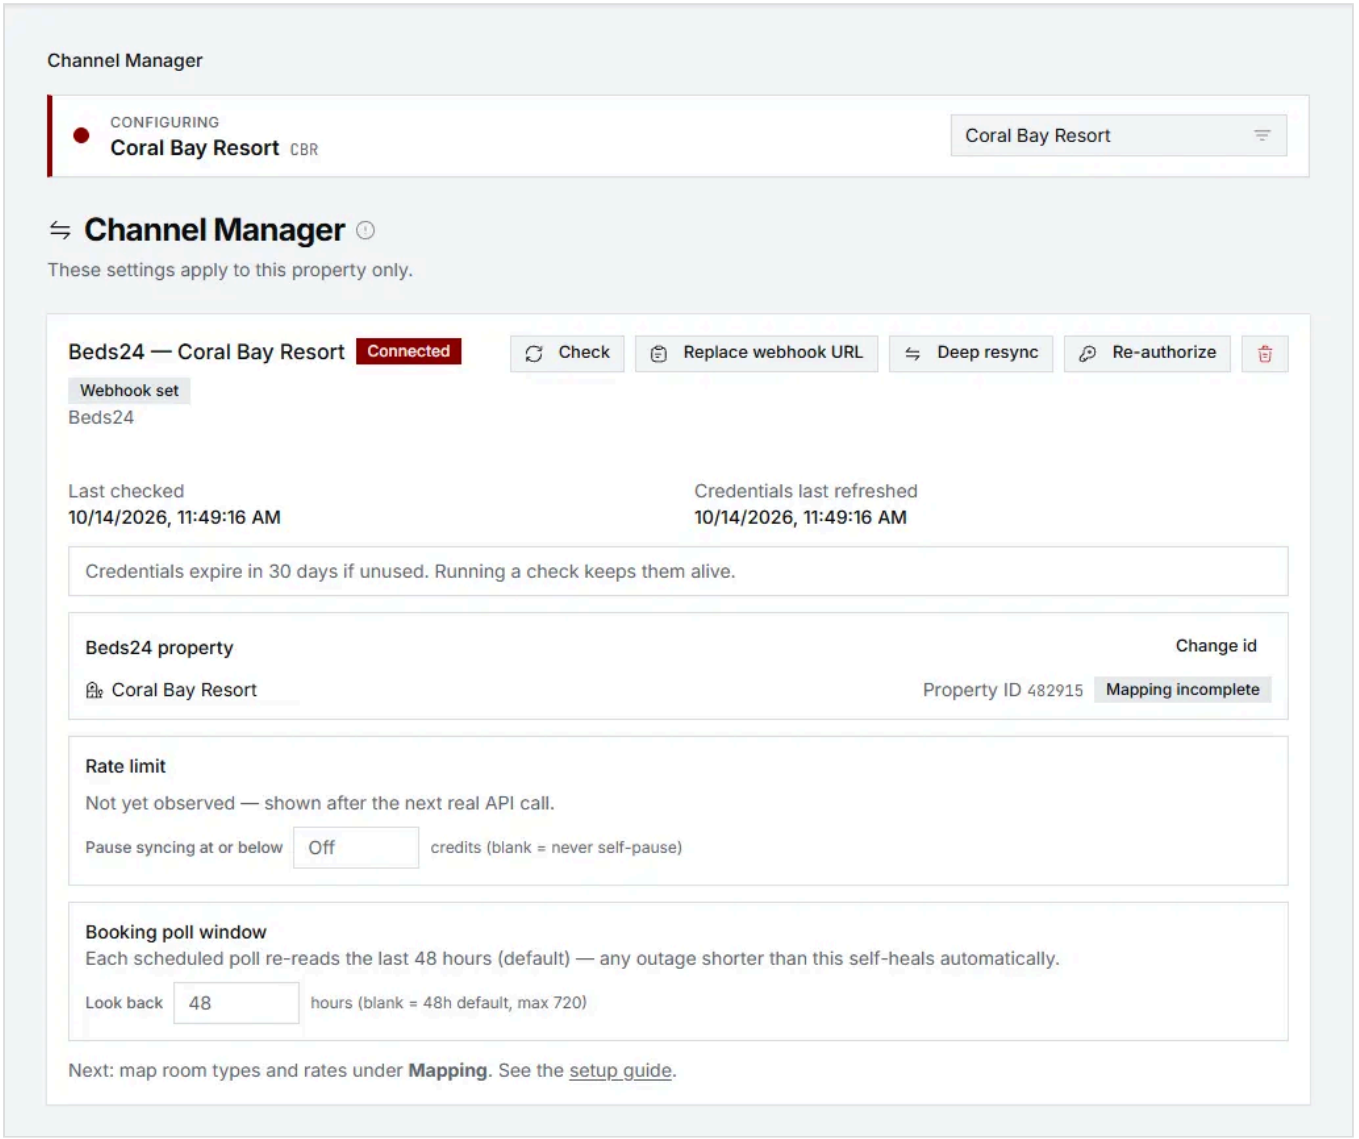

Field	What to enter
Invite code	The code you generated in Beds24. It is checked straight away and then stored encrypted. It is never shown again.
Beds24 property ID	The property's number in Beds24 (digits only).
Connection name	A label to tell connections apart. It is suggested for you.

Choose **Connect**. If Beds24 refuses the code, nothing is saved and the page tells you why, so you can fix it and try again with a new code. On success the page shows the connection as **Connected**.

3. Install the webhook

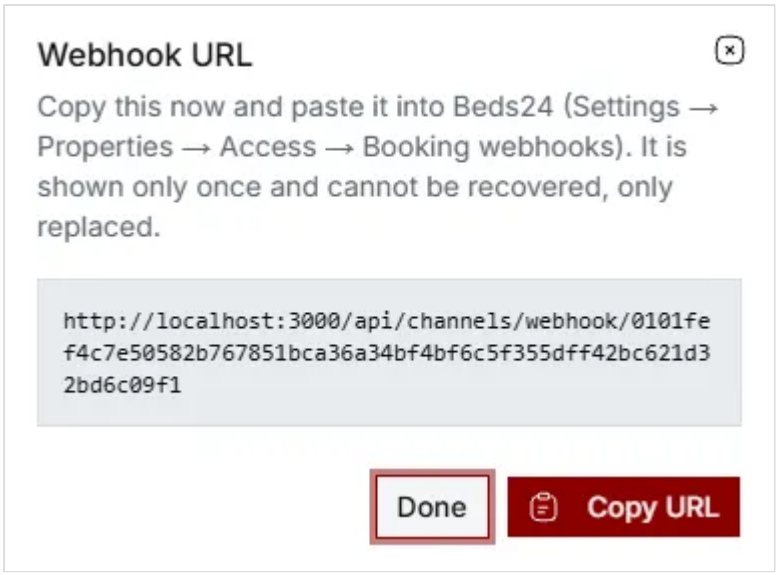

The webhook is how Beds24 tells Uppsolut Stay about a new, changed or cancelled booking the moment it happens. Without it bookings still arrive, but only when the regular check runs.

Choose **Generate webhook URL**. The address is shown **once**. Copy it.

In Beds24 open **Settings → Properties → Access → Booking webhooks** for this property and paste the address. Save.

Back in Uppsolut Stay the badge changes to **Webhook set**.

LOST THE ADDRESS?

Only a fingerprint of it is kept, so it cannot be shown again. Choose **Replace webhook URL** to make a new one and paste that into Beds24. The old address stops working at once.

4. Check the connection

Choose **Check**. It asks Beds24 for a fresh pass and records the result. The page shows when it was last checked, when the credentials were last refreshed, and the Beds24 property it is linked to. If the property id was typed wrongly, choose **Change id** next to it. Your mapping is kept.

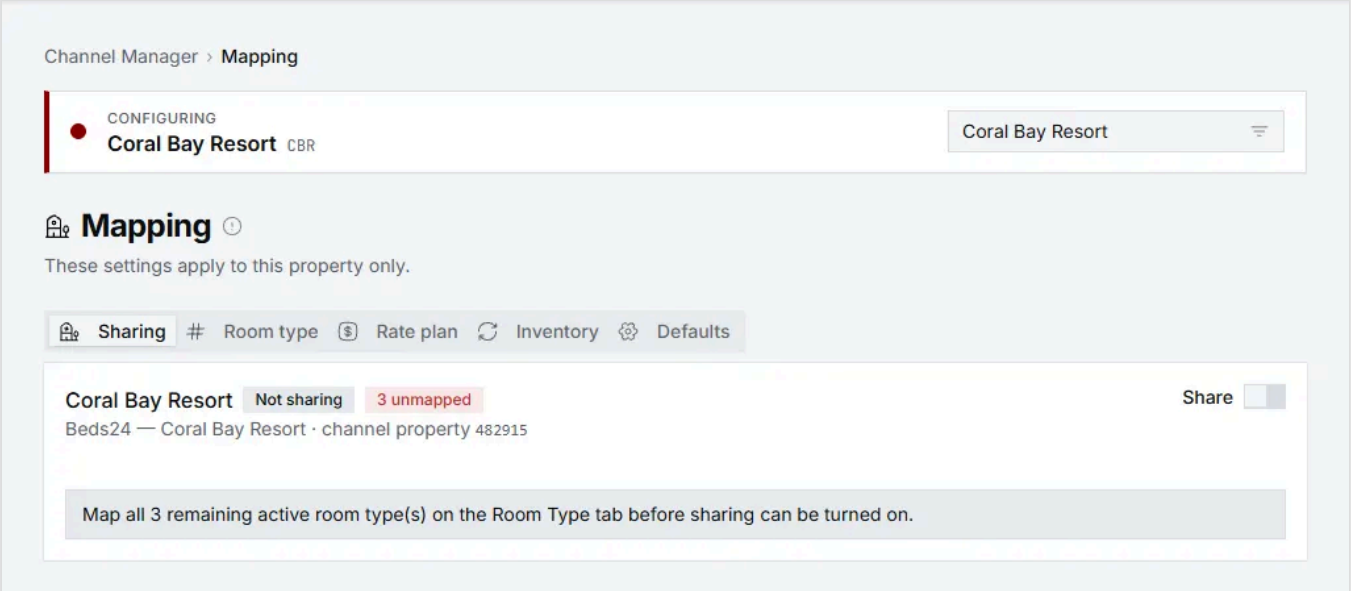

THE 30-DAY RULE

Beds24 cancels a credential that goes 30 days without being used. Uppsolut Stay refreshes it automatically well before then, and the page warns you if it is getting close. If it ever lapses the page says so: choose **Re-authorize**, paste a new invite code from Beds24, and everything else stays as it was.

5. Map rooms and rates, then start sharing

Connecting does not send anything yet. Next, tell Uppsolut Stay which Beds24 room is which of your room types, choose a default rate plan for incoming bookings, preview

what would be sent, and only then switch sharing on. That is covered on the Channel manager page.

Looking after the connection

Button or setting	Use it to
Check	Test the connection and keep the credentials alive.
Re-authorize	Replace the credentials with a new invite code, for example after they lapsed.
Replace webhook URL	Make a new webhook address if the old one is lost. Paste it into Beds24 straight after.
Deep resync	Re-read bookings from the last hours or days, for example after an outage longer than two days. Safe to repeat: nothing is duplicated.
Pause syncing at or below	Optional. Stops sending once your Beds24 account is low on its allowance of requests, so it is never used up. Leave it blank to never pause.
Booking poll window	How far back the regular check looks (blank = 48 hours). Leave it unless Uppsolut support asks.
Disconnect (bin icon)	Remove the connection, its link to the Beds24 property and the mapping. The property stops sharing straight away. Reconnecting needs a new invite code and the mapping done again.

If something goes wrong

You see	Try
The connection is refused with an invalid-code message	Generate a new invite code in Beds24, restricted to this property, and paste it again. Codes work once.
Status Error after it worked before	Choose Check to see the last error. If the credentials have lapsed, Re-authorize.
Bookings are not arriving	Check the badge says Webhook set, then open Inbound Bookings for a waiting booking and the reason. Run a Deep resync.
The property already has a connection	A property has one connection. Disconnect the old one first if you are replacing it.
Refused: licence limit	Your licence limits how many properties may use channels. Contact Uppsolut to raise it.

The **Exchange Log** (Channel Manager › Exchange Log) records every message sent to and received from Beds24, with secrets removed. Send the entry to Uppsolut support if you need help.

Finished? Tick the channel manager line of the Go-live checklist.

Channel manager

Share availability and prices with online travel agencies through your channel manager, and receive their bookings as reservations.

Where: Hub › Channel Manager (sidebar) · **Who:** Integrations (update to change mapping and send)

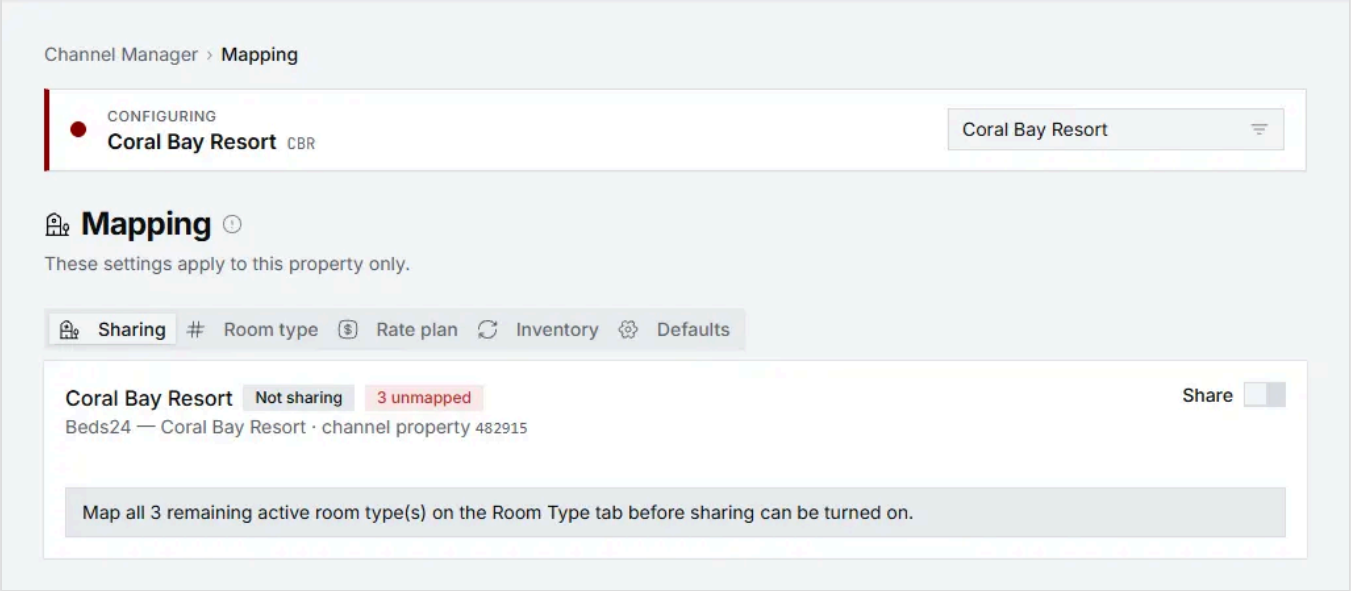

1. The connection

You connect each property to your own Beds24 account from the **Channel Manager**page, with an invite code and the property's Beds24 id. The Connect your channel manager guide walks through it, including the webhook. Uppsolut can also connect a property through its own account if you ask. Once connected, the page shows **Connected**, when it was last checked, and whether the webhook is set. **Check** tests the connection.

Before mapping, set up room types, rate plans and prices (steps 5 and 6), and create the same room types and rates in your channel-manager account.

2. Mapping

Where: Hub › Channel Manager › Mapping

Tab	What to do
Room type	Enter the channel manager's room ID next to each room type; it saves when you leave the field. Switch Share off to hold a room type back. Pseudo room types can't be mapped.
Rate plan	Optionally map rate plans to a price slot (1–16) in the channel manager.
Defaults	Choose the Default rate plan (required) and Default meal plan for incoming bookings, then Save.
Inventory	Resync sends availability again, with a preview first.
Sharing	The Share switch. It can only be switched on once every active room type is mapped.

> **CHOOSE A DEFAULT RATE PLAN**
> Incoming bookings are turned into reservations automatically, but only once a **Default rate plan** is chosen and their room type is mapped. Until then they wait, unconverted, on the Inbound Bookings page.

Checking before you share

Use **Send prices for a date range** (Rate plan tab) or **Resync** (Inventory tab) to preview exactly what would be sent: × for stop-sell, 0 for sold out, — for no price, and a list of room types not published and why. When it looks right, switch **Share** on. From then on availability and prices are sent automatically, a year ahead. A stop sale you set or lift is sent to the channel straight away rather than waiting for the next automatic update, and the channel can never book through a stop sale.

3. Inbound Bookings and the Exchange Log

Inbound Bookings lists bookings received from the channel manager and what became of each: the reservation it created, or why it is waiting (such as an unmapped room or no default rate plan). Waiting bookings are retried automatically once fixed. An **Overbooking** badge means more rooms were sold than you have. Resolve it before arrival, then **Acknowledge** it.

Exchange Log records every message sent and received, for troubleshooting with Uppsolut.

Green Tax register

For Maldives properties: the numbered register of guests liable for Green Tax, checked and marked as filed each month.

Where: Hub › Controls › Green Tax · **Who:** Green Tax Registrations (update to correct or file)

There is nothing to set up. The rates are on Finance › Tax, and posting is switched on Night Audit. Read this before your first month-end, and give the permission to whoever files with MIRA.

How numbers are given

Night audit gives each guest who stays 12 hours or more in a real room the next **Reg No**. Numbering restarts at 1 every year. The 12-hour rule uses either actual check-in times or your standard times, as chosen on Finance › Tax.

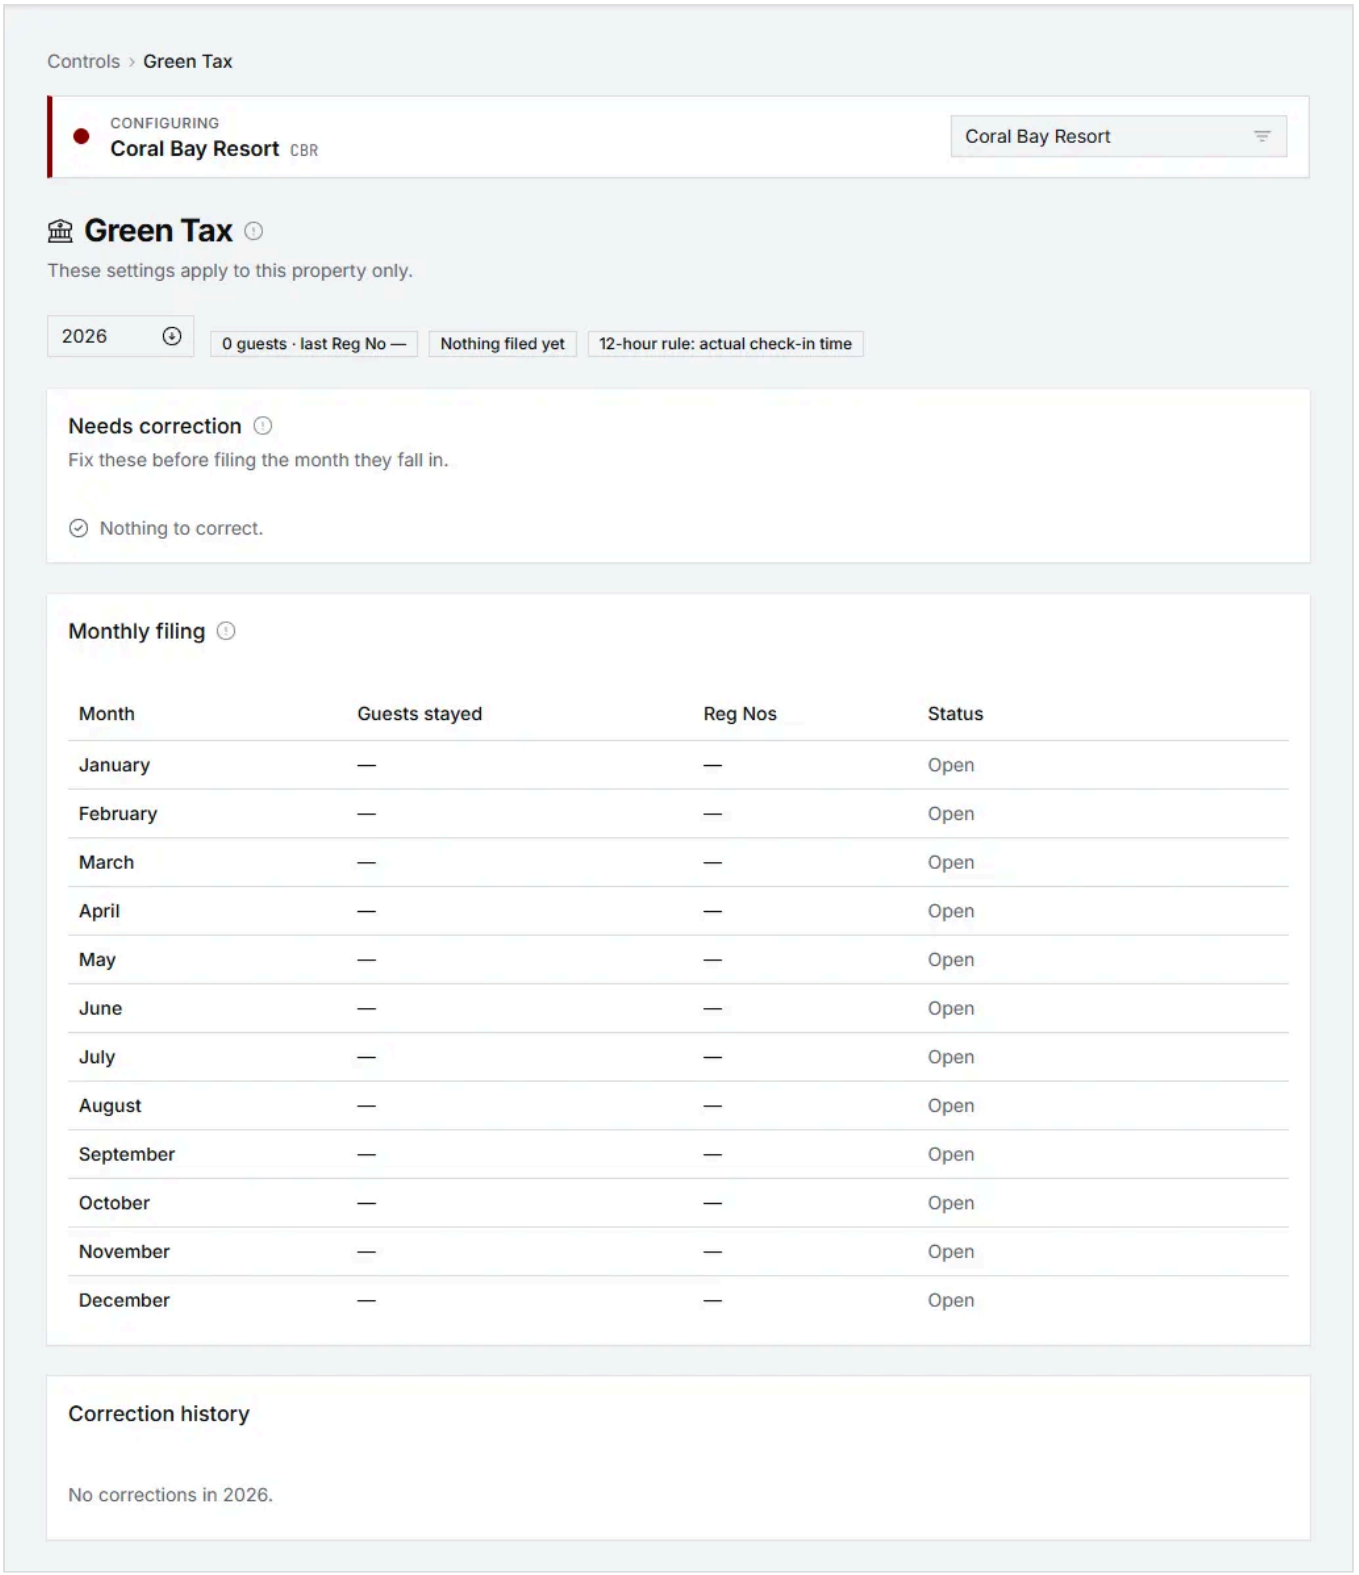

Every guest gets a number: the main guest and every accompanying or sharing guest on the booking, including guests who pay no Green Tax. A guest added to a stay after arrival gets a number at the next night audit.

Who pays Green Tax

Green Tax is charged per person, per night. These guests don't pay it, and the rest of their booking still does:

- infants under the exemption age (2 by default, set on Finance › Tax), and anyone booked as an infant
- Maldivian nationals
- work permit holders: tick **Work permit** on the guest's identification document
- anyone you mark **Green Tax Exempt** on their profile

The first three are worked out from the guest's profile, so the profile shows **Green Tax Exempt**already ticked, with the reason. Keep the birth date, nationality and identification up to date: Green Tax is charged from what the profile says on the night. For people on a booking who aren't named, the booking's adults and children pay.

Each month

1. **Needs correction** lists numbers to fix, for example a guest numbered who shouldn't have been. **Remove** or **Close gap** with a reason; later numbers move down by one, so the register stays without gaps.

2 When the month is complete (the business date has passed it) and nothing needs correcting, file it with MIRA, then choose **Mark as filed**, with an optional note. Months are filed in order.

> **FILING IS FINAL**
> Once a month is marked as filed, its numbers are frozen and it can't be un-filed. Check it before you mark it.

Go-live checklist

Go through this list before the first real guest. Print it, tick it, and keep it with your onboarding records.

> Start with the Hub **Overview**. It should say *Everything is set up — nothing needs attention*. The list below covers what the Overview can't check for you.

Enterprise

☐ Every member of staff has their own account, with the right roles and work location. Email addresses are in lower case.

☐ Only the people who need it have Property Setup, Users & Access or Integrations.

☐ Outgoing email is saved, and a test email arrived (and not in spam).

☐ Guest lists are filled: titles, genders, ID types, VIP levels.

Each property

☐ Currency, time zone and business date are right. The business date is your go-live day.

☐ Name, legal name, address, tax ID, phone, email and logo are correct: print a test invoice to check.

☐ Prices include taxes is set as intended, and the tax rates match your registration.

☐ Payment methods exist for every way guests pay, including City Ledger if you invoice companies; the settlement default is set.

☐ Revenue charge codes exist for everything you sell, and each generates the right taxes.

☐ Every outlet sells the right charge codes; spa and excursion outlets are linked.

☐ Every room exists with the right room type, building and floor. Room count matches reality.

☐ The Base Rate and every independent rate plan are priced at least a year ahead: check the calendars for "No rate" days.

☐ Allocations have prices covering the year; meal plans include the right allocations; the Allocation calculation mode is the one you want.

☐ Booking number format is right. Sequences continue from your old system if needed.

☐ Fee rules are active with the right amounts, if you charge cancellation or no-show fees.

☐ Night audit: nightly postings, no-show timing and room-status options chosen. Decide who runs the first audits by hand.

☐ Invoice payment details, terms and letter policy text are filled in; the registration card wording is approved.

☐ Idle sign-out is set for shared computers.

If you use them

☐ Excursions have prices, schedules and generated departures; spa has treatments, qualified therapists with hours, rooms and settings.

☐ Online booking: the rate plan to sell is chosen and priced; a test booking made from the website appears at the desk.

☐ Channel manager: connected to your Beds24 account, webhook set, every room type mapped, default rate plan chosen, preview checked, sharing on.

A dry run

> **SET THE BUSINESS DATE FIRST**
> A property's business date can be set freely only until its first activity. A test reservation counts, and after it the date only moves forward. Set the business date to your go-live day *before* any test, and don't run night audit on a test before go-live: it would move the date past your go-live day.

The safest full rehearsal is on a training property. Ask Uppsolut if you would like one. On the live property, keep the rehearsal to steps that don't close the day:

1. Create a reservation with a meal plan, check the price, and email the confirmation letter to yourself.
2. Post a charge through an outlet and take a deposit.
3. Print the proforma folio and check the taxes, wording and payment details.

4 Cancel the test reservation.

The test uses real numbers from your sequences. If your finance team needs the first real invoice and booking numbers to start clean, rehearse on a training property instead.
