Release notes

What each version of Uppsolut Stay added, improved and fixed. The current version is 8.10.0.

8.10.0 7 November 2026

A notification bell with phone notifications, and install Uppsolut Stay on your phone or computer like an app.

NEW

- Notification bell: a bell in the header, in the dashboard and in the Hub, with a count of what you have not opened. It tells you when the business date moves on, when a Night Audit does not finish, when an online booking arrives or could not be added, and when a channel connection stops working. You only receive what your role gives you access to.
- Phone notifications: from the bell, turn on notifications for this phone or computer. Urgent and action-needed ones (a Night Audit that did not finish, a new online booking) arrive even when the app is closed. Signing out turns them off for that device. Needs the app to be installed, and on iPhone to be opened from the Home Screen.
- Install the app: on Android and on Windows or Mac a card offers a one-tap install; on iPhone it shows the Share, Add to Home Screen steps. The installed app opens full screen, straight to your dashboard.
- Home screen shortcuts: press and hold the installed app's icon to jump to the Front Desk or Reservations.
- A new Install the app guide in the Operations documentation.

IMPROVED

- Setup and Operations buttons are replaced by the bell. Both are still in the Account menu at the bottom of the left-hand menu.

8.9.5 7 November 2026

A tidier Front Desk: the card and list switch moves to the end of the toolbar and cards get breathing room.

IMPROVED

- Front Desk: on Arrivals, the card / list switch now sits at the far right, after Auto-Assign.
- Front Desk: in card view the cards no longer touch the edges of the panel.
- Front Desk: the quick-key reminder line is gone. The keys still work.

FIXED

- Front Desk: pressing Enter now opens the selected booking even right after you click a tab.

8.9.4 7 November 2026

The Housekeeping board has a cleaner, roomier card, with fewer columns so each room has space to breathe.

IMPROVED

- Housekeeping: each room card now shows a large room number and status, then a short Type / Stay / Task list. Due out is bold amber and Arrival today is bold blue. Requests, attendants and technicians appear only when a room has one.
- Housekeeping: three cards across on a desktop, two on a tablet and one on a phone. On a phone you now see the same full card as on a desktop instead of a compact row, with larger tick buttons that are easy to tap.
- Housekeeping: when the board first opens, the cards rise into place one after another. They stay still when you filter, refresh or change a room's status.
- Reservation page: the header and cards settle into place one after another when a booking opens, and a placeholder shows while it loads. It plays once, not on every refresh.

8.9.3 7 November 2026

A payment can no longer be sent to a City Ledger account that does not exist, and a wrong payment can now be refunded straight from the folio.

NEW

- Folio: tick a payment line and press Refund to reverse it. You must give a reason. The original payment stays on the folio, marked Refunded, and a refund line takes it back

out. If you tick charges as well, only Move to folio is offered.

FIXED

- Folio payments: paying with the City Ledger method is now blocked when the guest, or the company or agent the bill is routed to, has no AR (credit) account. Before, the payment went through and the problem only appeared at check-out, with no way to undo it.
- Check-out and Night Audit: refunding a City Ledger payment now stops the folio from being treated as a City Ledger bill, so the reservation can check out again.
- Check-out: a company the folio was routed to can now serve as the AR account when the booking has no travel agent.

8.9.1 7 November 2026

The dashboard and the lists come alive: figures count up, charts draw themselves and rows arrive one after another the first time you open a screen. It is short, it plays once per screen, and it switches itself off if your device asks for reduced motion.

IMPROVED

- Dashboard: the key figures are redesigned. Each tile has a larger figure that counts up to its value, a soft glow in the corner, a ring or a line where that helps, and a small coloured pill showing the change. The same tiles are used on Daily Reports, Front Office, group pages and Night Audit reports.
- Dashboard and Daily Reports charts: lines draw in, bars rise, doughnut segments sweep round and the ranked and stacked bars and meters grow into place. Tiles lift in one after another.
- Lists and tables (Reservations, Front Desk, Client Relations, Group Blocks and others): the first time a list opens, its rows or cards pop in one after another. Filtering, sorting, paging and refreshing never replay it.
- Moving between pages in the dashboard has a very short fade, so the page reads as having arrived.
- Tape Chart and Availability: the grid fades in once when it first appears. After you move a booking on the Tape Chart, it pulses twice in its new place so you can see where it went.
- Cashiering: the figures on the Shift closed summary count up. The live summary of an open shift does not animate, because its numbers change as payments are taken.

- Side panels and notifications ease in with the same smooth curve as everything else.
- If your computer or phone is set to reduce motion, none of this animates: you see the final screen straight away. Printouts and PDFs never animate.
- Screens you work in all shift (forms, settings, the Housekeeping board, the menu and header) stay still; only their first appearance moves.
- Operations guide: the Dashboard and Housekeeping guide has a new section on figures, charts and movement, and the Tape Chart guide mentions the moved-booking pulse.

8.9.0 7 November 2026

Work faster from the keyboard: do things to a booking straight from the search box, jump to any page with two keys, and run the Front Desk lists without the mouse. A cheat sheet (press ?) lists everything, and everything that worked before still works.

NEW

- Keyboard shortcuts cheat sheet: press ? on any page to see every shortcut for your role. A Quick keys switch at the top turns the single-letter keys off, if you prefer.
- Search and commands (Ctrl K, or / when you are not typing): press Tab or → on a booking to see what you can do with it. A due-in booking offers Check in (or Assign room & check in when it has no room yet) and Folio. An in-house guest offers Folio, Post a charge, Move room and Check out. Enter on the booking still just opens it.
- Post a charge from the search box opens Fast Post with that guest's room already chosen.
- Check out from the keyboard always asks you to confirm first, and the usual messages about an early check-out or an outstanding balance still appear afterwards.
- More commands in the search box: Close shift (opens Cashiering with the close-shift window ready), Fast Post, Run a report and Keyboard shortcuts.
- Go to a page with G then a letter, for example G F for Front Desk, G R for Reservations, G H for Housekeeping, G P for Fast Post, G W for Cashiering and G N for Night Audit. You only reach the pages your role can open, and the letter shows beside each page in the search box.
- Front Desk list keys: J and K to move down and up the list, C to check in, O to check out, F for the folio, A to assign a room, M to move room, Enter to open the booking, 1 to 4 to switch tab and Esc to clear the selection.

- A new guide, Keyboard shortcuts, in the Operations guide, with every shortcut and what each one does.

IMPROVED

- The single-letter keys never interfere with typing: they do nothing in a text box, while a window is open, or when Ctrl, ⌘ or Alt is held. Ctrl K, / and Ctrl B work exactly as before.
- There is no key for no-show, cancel or void. Those stay behind their menus and confirmations.

8.8.6 7 November 2026

Small touches across the daily screens: a dashboard that tells you how to fill it, check-in buttons that say what they will do, a warning that names exactly what is missing, a Tape Chart that is easier to read and keeps its room names in view, and tidier page buttons.

IMPROVED

- Dashboard: when no tiles are showing, the page now says so and offers a Customise dashboard button. Before, only the status chips appeared and the rest of the page looked empty.
- Dashboard: the status chips that open another page (Night Audit, Cashier shifts) now end in an arrow and show where they lead when you hover over them.
- Front Desk and Reservations: when an arrival has no room yet, the Check in button now reads Assign & check in, because the first step is choosing a room. A hint explains it.
- Front Desk: the warning beside an arrival's name now says exactly what is missing from the guest's profile (nationality, date of birth, ID document), not just that something is.
- Tape Chart: booking cards show the guest name and the full confirmation number with nothing cut off (hover a card for the status, the colour and the key above still show it). Weekends are shaded, today's column is highlighted, and the room names are easier to read.
- Tape Chart: the date row and the room column stay in view as you scroll sideways or down.
- Reservations: the list shows row-shaped placeholders while it loads, so it no longer jumps when the bookings appear, and the Actions column has room for the longer Assign & check in button.

- Housekeeping: a room whose guest leaves today now has a tinted card and a highlighted Due out tag, so it stands out from the other occupied rooms.
- Reservations and Housekeeping: each page now has one main button and a More menu for the rest. Reservations: New booking, with Tape Chart and Auto-Assign under More (now also reachable on a phone). Housekeeping: Select, with Task sheets and Refresh under More; while rooms are ticked it shows Done and Select all.
- A new guide, Dashboard and Housekeeping, in the Operations guide, and updated Front Desk, Reservations and Tape Chart guide with a section on reading the Tape Chart.

FIXED

- Tape Chart: when you scrolled the chart sideways, booking cards slid over the room names. The room names now stay on top and the cards slide underneath.

8.8.4 14 October 2026

Connect your own channel manager: each enterprise can now link its properties to its own Beds24 account, without asking Uppsolut.

NEW

- Channel Manager, Connect to Beds24: paste the invite code and the property's Beds24 id to connect a property yourself. The code is checked before it is used, so a wrong code saves nothing.
- Generate (or replace) the webhook address yourself and paste it into Beds24 so bookings arrive the moment they are made.
- Re-authorize with a new invite code, correct the Beds24 property id, run a Deep resync of recent bookings and disconnect a property, all from the Channel Manager page.
- A new step-by-step guide, Connect your channel manager, in the Configuration guide, with screenshots.

IMPROVED

- Your own Beds24 account has its own allowance of requests, so the optional pause setting now protects your account only.
- Uppsolut can still connect a property through its own Beds24 account for customers who prefer it.

8.8.3 12 October 2026

Cashiering: currency exchanges and paid-outs can be linked to an in-house guest, and closing a shift now shows what should be in the drawer before you count it.

NEW

- Cashiering, New exchange and New paid-out: choose Walk-in / Not linked, or In-house guest and pick the guest from a searchable list of rooms. The guest's name and room show on the exchange or paid-out in the shift list and on the printed exchange receipt. Linking a guest does not post anything to their folio.
- Close shift shows a summary before you close: the payments taken by method, how the expected cash is made up (opening float, cash received, cash refunded, paid-outs and currency exchanges) and the expected closing cash.

IMPROVED

- Close shift: enter the cash you counted and see straight away whether it is balanced, short or over, then tick to confirm the amount in the drawer. The shift only closes once it is confirmed. It is no longer a blind drop.

COMING NEXT

- Changing a stay's dates from the Tape Chart: drag the start or end of a booking to extend or shorten it. Availability, stop-sale and the new rate and total are checked and shown for confirmation before anything is saved.

8.8.2 12 October 2026

Housekeeping and Maintenance get easier to run day to day: assign a room to an attendant straight from the room, a task sheet that shows who is in the room, a maintenance board that only keeps today's resolutions with a report for the history, and a Fast Post History that finally shows what was posted.

NEW

- Housekeeping: Assign attendant (or Reassign attendant) is in the menu of every room, on the board and on the phone, so one room can be handed out without selecting it first.
- Task sheet: each room shows who is in it (the lead guest and the names of those sharing), the headcount, Occupied or Vacant, and whether the guest is arriving, staying over or departing, with the stay dates. A same-day turnover shows both the

departing and the arriving guest. Open maintenance issues show under the room with their state and priority.

- Task sheet: every room has Clean, Inspected and Dirty buttons (the room's current status is greyed out and the next step is highlighted), not only the dirty and clean ones.
- Maintenance Resolutions report (Reports, Maintenance): the tickets resolved in a date range, optionally for one technician, with who resolved them and how many days they were open. It can be downloaded as PDF, Excel or CSV.
- Fast Post History lists the charges posted to room folios as well as walk-in bills. Each room posting has Open folio and, while the folio is open, Void (with a reason). Walk-in bills that are still open are listed too, with an Open badge.
- Folio, Move charges: another room's folio, or a group's Posting Master, can be picked from a searchable list behind the Another room button.

IMPROVED

- The Maintenance board shows every open and in-progress ticket, and the tickets resolved on the current business date. Once the business date moves on, resolved tickets leave the board; the Resolution history button opens the report for older ones.
- Move charges starts with this reservation's own folios and its linked travel agent or company, instead of listing every in-house room.
- Fast Post shows each posting's total including service charge and tax. A + next to the amount opens the breakdown line by line.
- Every date picker treats the property's business date as today: it is highlighted, and an empty picker opens on its month, instead of using the computer's date. The Fast Post History opens on the business date.
- Tax invoices, proforma invoices and interim bills no longer print a Room Assignments table. The Room line of the Stay Summary lists a room change with its dates, and a stay that stays in the same room shows that room once.

FIXED

- Fast Post History now shows what was posted. It used to list only closed walk-in bills, so room postings and walk-in bills that were still open never appeared.
- The task sheet groups rooms (arrival, due out, dirty, stayover) by the business date, not the computer's calendar date.

8.8.0 11 October 2026

A big step for day-to-day operations: card views and clearer badges on the Front Desk, Reservations, Group Blocks and Client Relations, a Posting Master for every group block, split stays that bill correctly, safer room moves on the Tape Chart, and phone numbers with a country-code picker.

NEW

- Group blocks have a Posting Master: a reservation of its own whose folio is the block's master folio. It is created automatically when the block becomes Definite, checked in automatically with the first reservation of the block, follows the block's dates and is cancelled with the block if nothing has been posted to it. Night Audit does not charge it a room.
- Front Desk: a table / card switch on wide screens. Every row and card shows the two buttons you reach for in that tab (Arrivals: Check in and Register; In-house and Room moves: Traces and Folio; Departures: Check out and Folio), with the rest behind a ... menu. The tabs and summary tiles follow the guest's journey: Arrivals, In-house, Room moves, Departures.
- Auto-Assign shows its plan first: a window lists each booking and the room it would get, and the bookings that could not be placed, with the reason. Nothing is saved until you press Assign. It is on the Reservations list and the Front Desk Arrivals tab.
- Reservations card view: names of the guests sharing the room, a gold star for VIPs, a repeat mark with the number of previous stays, and small labelled badges for what is filled in on the booking (Transportation, Traces, Deposit, Registration, Special request, Split stay, Override rate and more).
- Group Blocks: a table / card switch, with badges for the account the block bills, the cutoff date, the rooms held per room type, Overbooked and the Posting Master.
- Client Relations is a list of cards with the name enlarged, the email in small type and badges that matter for each kind of profile (guests: visits, VIP level, nationality; companies: credit account, bookings; travel agents: commission, IATA number, credit account, bookings; staff: nationality).
- Profiles with anything linked to them (bookings, folios, group blocks, registrations) can no longer be deleted; they are deactivated instead, which hides them from searches and pickers, keeps their history and can be undone. Only a brand-new profile can be deleted.
- Phone and mobile fields have a country-code dropdown (flag, country and dialling code, searchable) next to a number-only box, on profiles and their contacts, the

quick-create guest, eRegistration, outlets, spa therapists and transport providers. Numbers already saved keep working.
- eRegistration pre-fills each guest from their profile. The lead guest's name is fixed; everything else can be updated by the guest and goes onto the profile when reception applies the registration. Returning and VIP guests get a small sparkle by their name.
- Editing a reservation: every segment of a split stay has its own Room type and Rate plan selectors, and a new segment starts from the previous one.
- Tape Chart: while dragging a booking, rooms turn green where it fits all its nights and red where it does not, and a red room is blocked with the reason and a button to adjust the dates. A room of a different type asks whether to recalculate the rate or keep it, and for a reason (required for an in-house guest, optional before arrival).

IMPROVED

- The guest / company / agent profile page and its Edit and New forms follow the reservation page: a plain header, shared badges, solid gold stars, and every group of details in its own titled card. A profile's Stays tab shows one summary line per stay.
- Stars are clean, solid gold stars wherever a guest is VIP or an item is marked primary or favourite.
- The eRegistration form uses the calendar date picker, a searchable country list for the address, and no longer repeats the Address label.
- Traces and messages have a checkbox to mark each one done, instead of an unclear round icon.
- Group blocks no longer show a group eRegistration panel; each booking still has its own eRegistration link.
- Client Relations has a sort (recently updated, name, most visits) and an Export CSV button again.
- Reports (arrival and departure lists, the Front Desk and Reservations reports) show every room and room type of a split stay, not only the first.

FIXED

- Split stays with different room types or rate plans bill correctly night by night: each night is charged at its own segment's rate (it used to take the last segment's rate for every night), and a rate plan's packages such as breakfast are charged only on the nights of the segments on that plan. Check-in and pricing a mid-stay room move also use the segment for that night.
- Tape Chart: a booking can no longer be dropped on a room that is not free for all of its nights, only reserved and in-house bookings can be dragged, and an in-house guest

can't be dropped on Unassigned.
- Moving an in-house guest to another room splits the stay on the property's business date, not the computer's calendar date (which could leave the new room segment starting after check-out). A later booked room segment is left as it is, and the booking's Room move badge now updates after a move on the Tape Chart or Front Desk.
- A negotiated rate plan can only be booked through the travel agent or company it was set up for; this is now enforced when the booking is saved, not only hidden in the form.
- Opening a reservation that has not arrived yet on a wide screen shows its Edit button in the header again.
- Reading a passport or ID on eRegistration is faster and never leaves the guest stuck: Next stays locked while the ID is read, and after 30 seconds the guest is asked to fill in their details manually and can carry on.
- On the eRegistration form, the Next button no longer flickers in and out when you move the pointer over or off the form.

8.7.2 11 October 2026

Every property now starts with a ready-made list of bed types, room views and room amenities.

NEW

- New properties come with a starter set of room features: common bed types (Single, Twin, Queen, King and more), views (Ocean, Garden, City and more) and amenities (Air conditioning, Wi-Fi, Minibar, Balcony and more).

IMPROVED

- Existing properties are topped up with the same starter set. Nothing you have already set up is changed: features you renamed or switched off stay exactly as you left them, and only the ones you don't have yet are added at the end of each list.
- The Rooms & inventory guide explains the starter set.

8.7.1 10 October 2026

Reports link through to their reservations, downloads are recorded in the Activity log, and the Reports page is easier to browse on a phone.

NEW

- In Daily Reports, a confirmation number (and the reference in the Transaction Journal, and the invoice number in the GST report) is now a link: click it to open that reservation.
- Every report download — PDF, Excel, delimited text or CSV, and the Transportation report from the board — is recorded in the Activity log under Daily Reports: who, which report, which file type and which dates. Reading a report on screen is not recorded.

IMPROVED

- On a phone, the report groups on the Daily Reports page start folded, so the list of reports is a handful of lines instead of a long scroll.
- The Daily Reports guide now has screenshots of the report page and the Download as window.

8.7.0 10 October 2026

Daily Reports are redesigned: each report opens on screen with key figures and charts, and files are downloaded from one Download as window.

NEW

- Reports open on screen at once, with key figures and charts above the list. Pick a report from the list at the side, set its dates, and it updates by itself — there is no separate Preview step.
- Download as: one window for PDF, Excel, Delimited text (.txt) and CSV. Choose the delimiter, quoting, encoding and line ending for text files, the page orientation and charts for PDF, and a Summary sheet for Excel. Your last choice is remembered.
- Star the reports you use most to keep them under Favorites at the top of the list, with your three latest reports under Recent. Report groups start folded and open when you search.
- The report list, its dates and filters are kept in the page address, so a report can be bookmarked or sent to a colleague.

- On the list: click a heading to sort, search within the report, fold groups away, and see totals stay in view.
- Reports can now be read on a phone or tablet, with the list shown as cards and Download as within reach at the bottom of the screen.

IMPROVED

- PDF reports now include the key figures and charts (this can be turned off when downloading).
- Text and CSV files are data only by default — one heading row and one line per record, with plain numbers and year-month-day dates — so other systems can read them. The older layout with title and subtotals is still available as As printed.
- Text in downloaded files that starts with =, +, - or @ is now marked as plain text, so a spreadsheet can never run it as a formula.

FIXED

- The application could not be packaged for release because of how the Charge codes and Outlets screens kept their lists of options. Those lists were moved; Charge codes and Outlets behave exactly as before.

8.6.5 10 October 2026

A view-only price Calendar is now the first tab of Revenue, Rate seasons is the one place to change prices, and a stop sale can be overridden by staff who are allowed to.

NEW

- Revenue now opens on a Calendar tab, replacing Manager Flash: a view-only month of nightly prices for one room type and one rate plan. It starts on the Base Rate; choose another rate plan or room type to look at it. Hover a day for the extra adult and child prices. A night a plan has no price for shows NA.
- Click a day, or a first and last day, on the calendar and choose Update prices: Rate seasons opens with the rate plan, room type and dates already filled in, and brings you back to the calendar when the prices are pushed. Stop sale is in the same bar.
- Days closed to sale are marked Closed on the calendar.
- Override Restriction: staff with Availability update access can book a night under stop sale after a warning. It is separate from Overbook. If a night is both closed and sold out, one message shows both warnings and both must be accepted. Overrides are recorded in the activity log.

IMPROVED

- Rate seasons is now three steps — rate plan, then season and price, then room types — and each opens only after the one before is saved. Arriving from the calendar, all three are already filled in.
- A rate plan's Calendar button opens the same calendar fixed to that plan, view only. The bulk update form on it is gone; prices are changed in Rate seasons.
- Setting or lifting a stop sale is sent to your channel manager straight away instead of at the next scheduled update.
- Selected days on the calendar are shaded in a soft red.

FIXED

- Your website and channel manager still cannot book through a stop sale; the refusal now reports a stop sale rather than a sold-out room when both apply.

8.5.0 5 October 2026

Transportation: airport meet-and-greet, speedboat and seaplane transfers and island trips, planned on a daily board and charged at Night Audit.

NEW

- Transportation, an add-on: once it is enabled for your enterprise, each property switches it on in the Hub. Set up transport types, locations (airports, jetties, seaplane platforms, islands), routes with their usual departure times, your own boats and outside operators with their seats, and prices per route — per person, per vehicle or per trip, by season, each with its own charge code and tax. Load defaults sets up the usual Maldivian basics in one click.
- Book a pickup or drop-off for a reservation, or for a traveller with no stay. The price comes from the route straight away, with tax; a manager can set it by hand with a reason. Airport transfers carry the flight, the airport rep and the meeting point.
- Departures: put guests from different reservations on the same boat or seaplane, see seats used against the vessel, and move guests between departures. Departures can be created from the routes' usual times, or from the guests you select.
- The Transportation board: one day at a time with a week overview, grouped by transport type, filtered by type, route, provider, status, airport rep, flight or group. An Airport rep view lists the day's flights in time order, and a Dispatch view shows each boat with its passengers — both made for phones and tablets.

- Needs attention: a warning when a boat leaves too soon after a flight lands, reaches the airport too close to take-off, or a flight time changes after the guest was put on a departure. Warnings never stop you saving.
- Suggested transfers: this week's arrivals and departures without a transfer, created as drafts for you to confirm.
- Night Audit charges transfers to the guest's bill — pickups on the arrival day, drop-offs on the last night, dated the departure day — once per transfer. No-shows and cancellations are never charged automatically; post a fee, waive or void from the transfer.
- Daily Transportation Report in PDF, CSV or Excel, from the board or Daily Reports.
- A Transportation card on the reservation page, and a transfer mark in the reservations list.
- The Booking API can run Transportation from your own systems, with a server-only key.

IMPROVED

- The proforma invoice, daily details and Advance Bill include the stay's transfers.
- The reservation's Transport section is simpler: flight number, transport number and flight time for the pickup and the drop-off — nothing else. Charges for a transfer are no longer entered there; any already entered still post at Night Audit as before.
- Where Transportation is on, the reservation's Transport section becomes read-only and shows what is booked in Transportation; transfers are added and changed there. Transport entered on a reservation before is carried over when you book the transfer, and never charged twice.

8.4.0 26 September 2026

Cleaner folios: a charge and its Service Charge, GST and Green Tax now show as one line you can expand.

NEW

- Every posting has a check number. A charge and the Service Charge, GST and Green Tax lines it creates share one number, and a Night Audit night's room rate, extra occupancy and package items share one too.
- The folio rolls lines with the same check number up into a single line with the total. Click the arrow to see the individual lines. Selecting or voiding a rolled-up line applies

to all its lines.
- Edit a line's check number to split it out of a roll-up, or give two lines the same number to roll them together. Lines on different folios never roll together.
- Check numbers are listed in Sequence Manager with the other document numbers.

IMPROVED

- Post charge: type a charge code or its description to find it. The list is full width and easy to read.
- The "Summary by check number" print layout now uses the check number, including on proforma invoices, where each projected night reads as one line.
- Older folios are numbered too, so they roll up the same way.

FIXED

- Customise dashboard on a phone: the Reset and Done buttons no longer sit in the middle of the list.
- Printed folios: the "By date" layout no longer shows the number of transactions twice, lines print in posting order, and Service Charge, GST and Green Tax totals always print when the folio carries them.

8.3.0 25 September 2026

The desktop app is calmer and quicker to work in: fewer pop-ups, one clear next step after each action, and the same layout on every screen.

NEW

- Search from anywhere with Ctrl+K (or /): find a booking by guest name or confirmation number, a room, a guest profile, or jump to any page you can open.
- The reservation page has a summary panel on the right that stays in view: dates, room, balance and the one next step, such as Check in, Settle folio or Check out. Other actions are under More.
- The folio can be opened as its own page, so you can keep it in a separate browser tab. Once a stay is settled, the folio offers Check out directly.
- Night Audit lists, by name, the bookings that will be marked no-show and waits for you to review them before posting. Each guest still due out has a Folio button.
- Price calendar: click a day, then another, to fill the bulk update dates. You can switch rate plans without leaving the calendar.

- Tape chart toolbar: Today, jump to a date, and a 7, 14 or 30 day view, with a colour legend.
- Lists of profiles, debtors, groups and the Activity Log can be sorted by column, show how many results there are, and can be exported to CSV.
- Long Hub setup pages have jump links to each section, and the Hub menu lists every property setup section.
- Company and travel agent profiles have a TIN (Tax Identification Number) field.
- Green Tax is worked out per guest. Guests under 2, Maldivians and work-permit holders are exempt automatically (the profile shows why), and Night Audit charges only the guests who pay.
- The GST report is laid out for the MIRA GST return: one line per invoice, dated on departure, with the agent and their TIN, stay dates, amount excluding tax, service charge, GST, Green Tax and the total.

IMPROVED

- Messages after an action appear as a small notice in the top-right corner instead of a pop-up you have to close. Where it helps, the notice has a button for the next step, such as Open folio.
- After you save a booking you land on that booking. A walk-in booking goes straight to check-in.
- Checking out a guest who still owes money offers to open the folio instead of stopping with an error.
- Every page has the same title layout, breadcrumbs on detail pages and a clear browser tab title, so several open tabs are easy to tell apart.
- The property name in the header switches property, the business date opens Night Audit, and Setup opens the Hub. The Hub has an Operations link back.
- The open tab and list filters are kept in the address bar, so Back and refresh return to the same view. Rows can be opened in a new browser tab.
- Cleaner screens: Cashiering is one shift summary with tabs, guest profiles hide empty fields and use tabs, housekeeping cards are neutral with a coloured status stripe, and the tape chart uses softer colours.
- Housekeeping: click a room to change its status or complete a task. Use Select for changes to several rooms.
- Fast Post searches as you type and remembers the last outlet.
- Deleting or voiding anything now asks you to confirm, and actions that need a reason ask for it in the app instead of a browser prompt.

- Long forms warn before you leave with unsaved changes. Buttons can't be pressed twice while saving, and Enter submits a dialog.
- Hub setup sections have one Save button that is available once you change something, and show "Saved" when done. Switches that save on their own show a brief tick.
- Button and label wording is consistent across the app.

FIXED

- A payment taken during check-in could fail without anyone noticing. You are now told, with a link to the folio.
- Checking in from the tape chart now goes through the full check-in steps.
- In Housekeeping, Select all no longer includes rooms hidden by the status filter.
- The profile list no longer stops at 50 without saying so.
- Profile titles show as "Mrs" instead of "MRS".
- A guest added to a stay after the arrival night now gets a Green Tax registration number at the next End of Day.

8.2.0 25 September 2026

Uppsolut Stay now works properly on a phone, across the whole app, and the desktop layout stays exactly as it was.

NEW

- Phone layout across the app. It covers Front Office, Reservations, check-in, folios, Housekeeping, Maintenance, POS, Spa, Excursions, Profiles, the booking form, tape chart, availability, cashiering, debtors, reports, revenue, groups, End of Day and the Activity Log.
- A bottom navigation bar on phones that shows only what your role can use, with the business date always in the header.
- Dialogs open as bottom sheets on phones, with the title and action buttons pinned in place. Long pick lists and date pickers open as easy-to-scroll drawers.
- A redesigned guest eRegistration page on phones. The guest scans their ID first, then works through steps with a progress bar. The Next and Submit buttons stay visible, and the phone's keyboard and autofill match each field.
- A "Report issue" button in Maintenance, working the same way as reporting an issue from Housekeeping.

- Plus and minus steppers for guest counts on phones (booking form, Spa and Excursions).
- Hub setup screens and print pages show a "Best on a larger screen" notice when opened on a phone.
- Release notes in the documentation: what every version added, improved and fixed.

IMPROVED

- Payments on a guest folio and a POS walk-in bill are prefilled with the outstanding balance. The amount follows the balance until the cashier types a different one.
- Larger tap targets on touch screens. Forms no longer zoom in when a field is tapped on iPhone or iPad.
- The folio's Post Charge / Post Payment panel and the Customise Dashboard dialog are easier to use on a phone.
- Tables without a phone view now have one, including walk-in bills, payment methods, amenities and email usage.
- The booking form shows an error only after you have used a field or tried to save.
- The page header now stays pinned while you scroll on desktop.

FIXED

- Spa: a therapist's "Extended hours" now opens bookable times before the spa opens or after it closes, for the treatments that therapist gives.
- The tape chart and the availability grid now open on the property's business date.
- The Activity Log's module filter now reads "All modules".
- Nothing on a phone screen is cut off or needs sideways scrolling any more. Before this release, some buttons could not be reached on a phone.
- Booking notifications sent to a website could skip their first delivery attempt. They are now sent straight away.

7.5.0 24 September 2026

A new Configuration guide for your admin team, property logo upload, and many fixes to Hub setup screens.

NEW

- Upload your property logo and crop it to a 3:2 frame. It appears in the app header, on invoices, receipts, statements, confirmation letters, registration cards, reports and

emails.

- Late arrivals: if a guest checks in after their first night was already audited, check-in shows those held nights. The desk charges them (with service charge and GST, no Green Tax) or waives them with a reason. Waiving needs the same permission as voiding a charge.
- The online help is now split into three guides: Booking API (for developers), Configuration (for admins and property teams) and Operations (for staff). The Configuration guide walks through enterprise and property setup in order and ends with a go-live checklist.

IMPROVED

- A scheduled Night Audit must be set between 22:00 and 06:00. You get a warning if the audit time means late arrivals that night could be marked No-Show.
- A scheduled Night Audit now stops and waits if a cashier drawer is still open, instead of closing it.
- New properties start with a clean chart of charge codes: only the system codes they need, with no sample codes. New outlets post to the codes you choose.
- "Copy from another property" copies charge codes by number and reports anything it skipped. It never links to another property's codes.
- Hub setup screens check your input and show clear save errors. This covers properties, people, rooms and room types, revenue, sequences, amenities, Spa and Channel Manager.
- Items that already have history cannot be deleted. Tax profiles in use are protected, and deleted list options can be restored.
- The price calendar shows the exact price Night Audit will charge. The booking-number preview shows the real next number.
- Reactivating a room type brings its rooms back as Dirty.
- User passwords need at least 12 characters. Email addresses now work with any capitalisation when signing in.

FIXED

- Tax-inclusive charges could come out one cent over the amount entered. They now add up exactly.
- A scheduled Night Audit could be stopped by a problem at another property, or not pick up where it left off after a failure. Both are fixed.
- Guests checking in a day late now get their Green Tax registration number.

- Nationality values saved before the nationality master list now display correctly.
- Adding a user in the Hub could fail. This is fixed.
- Security hardening of enterprise email and file-transfer settings.

7.3.0 24 September 2026

All setup moves into the Hub, split into Enterprise and Property areas, and Night Audit can now run on a schedule.

NEW

- A reorganised Hub. The Enterprise area holds what every property shares: properties, people, sessions, email and file transfer, Booking API keys, support access, and guest and staff lists. The Property area holds each property's own setup, one property at a time.
- Each property now has its own charge codes, taxes, payment methods, dropdown lists, stationery, booking-number format, Green Tax register and online booking settings.
- "Copy from..." another property, section by section. Anything the property already has is kept and flagged as "Already here", never overwritten.
- Scheduled Night Audit runs at a set time in the property's own time zone. It stops at any step that needs a person, and the Hub Overview shows it.
- No-show options: mark no-shows at the arrival night's audit, hold one night for a late arrival, or leave it to the front desk. You also choose whether the audit posts the no-show fee.
- Optional automatic check-out, at Night Audit, of departing guests whose folios are fully settled.
- A Night Audit controls page. You can move the business date forward safely, with checks for in-house guests, arrivals, postings, open cashier shifts and activity bookings. You can also switch nightly Green Tax, GST and Service Charge posting on or off.
- A built-in nationality and country list with flags, used in every nationality and country field, including eRegistration. Each enterprise can rename entries or add its own.

IMPROVED

- The Hub Overview shows only what needs your attention, with a link to fix each item, and a channel-manager status for each property.

- Each property has its own channel-manager connection. Uppsolut sets it up, and your team handles mapping, checks, bookings and logs.
- A Booking API key covers either one property or all of them.
- Job Functions on user profiles are now a fixed list.
- Saving one settings page can no longer undo changes made on another.

6.1.0 23 September 2026

A new Operations Dashboard, a Booking API for your own brand website (rooms, Excursions and Spa), and a Green Tax report in the MIRA format.

NEW

- The Operations Dashboard is now the landing page. It shows occupancy, revenue, cashiering, housekeeping, arrivals and departures, Spa, Excursions and more. Each person only sees the sections their role allows, and can arrange their own layout (saved per property).
- Booking API for your brand website. Your website can show availability and prices, let guests pick a meal plan and paid extras, and create bookings. Keys are managed in the Hub.
- Online booking for Excursions and Spa through the same API, with live availability, short holds, instant booking and guest self-cancellation.
- Booking notifications (webhooks) can alert your website when an online booking changes.
- Spa appointments now follow a full lifecycle: check-in, start, complete, cancel (with a cutoff and late fee) and no-show (with grace time and fee).
- Online bookings are marked on the Spa schedule and the Excursion manifest. A new Online Bookings list shows every attempt.
- Green Tax Report in the MIRA information sheet layout, with an Excel export in the government format. A Hub register flags wrongly numbered guests, lets you correct numbers, and marks each month as filed.
- A Missing Profile Information report lists guests missing Green Tax details.
- Revenue: a "Define a Rate Season" tool for setting prices across a date range.
- Uppsolut Mail Service (optional add-on): enterprises without their own email server can send guest emails through Uppsolut.

IMPROVED

- Reports have a Preview button. PDFs use the app's own styling, and report dates default to the business date.
- Reports are picked in two steps: choose a group, then the report.
- Dropdowns look the same everywhere and work with the keyboard. Short lists hide the search box.
- Booking Method on company and travel agent profiles, and a work-permit tick on ID documents, for Green Tax reporting.
- Stays under 12 hours no longer get a Green Tax registration number.
- Sessions that have timed out are cleared from the Hub's Active Sessions list.
- Thinner, themed scrollbars throughout the app.

FIXED

- Some date pickers saved the day before the date you picked. This is fixed.
- A sign-in loop, where the browser kept going between the login page and the dashboard, is fixed.
- A crash just after signing in to the Hub is fixed.
- A crash when switching years in date range pickers is fixed.

6.0.1 9 August 2026

A maintenance release that brings together the 5.9.x work. It has no new features.

5.9.5 9 August 2026

Smaller improvements to billing and Hub reports.

IMPROVED

- Advance Bill: choose the number of nights in a proper dialog. After posting, you can print or email the bill straight away.
- The Permission Matrix report prints in landscape and is more compact.
- The Hub sidebar now matches the look of the main app.

5.9.0 9 August 2026

The Uppsolut look, a layout that works on phones and tablets, and printed documents you can email or download as PDFs.

NEW

- Invoices, receipts, registration cards, confirmation letters and statements can be emailed or downloaded as a clean PDF from any device.
- New enterprises receive their sign-in details by email.

IMPROVED

- The Uppsolut brand across the app: colours, logo, sign-in screen and icons.
- Printed documents open as clean pages without the app's menus, and lay out properly on a phone.
- Admin and setup tables stack into cards on phones and tablets. The Availability grid has a phone view.
- Printed documents, emails and Excel exports use consistent brand colours.

5.8.0 7 August 2026

Staff can hold several roles, sessions are properly managed, and eRegistration gains e-signatures and ID scanning.

NEW

- The guest's e-signature from eRegistration prints on the Registration Card.
- ID scanning (early version) on the guest eRegistration form. It reads passports and national ID cards to fill in the guest's details automatically, on the device.
- Country flags wherever nationality and country are shown.
- Staff can hold more than one role. A person's job title is now kept separate from their access role.
- Staff administration moved to the Hub, with an Active Sessions list and a printable Permission Matrix report.
- Folio routing instructions are chosen from a grouped checklist.

IMPROVED

- Resending an eRegistration link can let guests who already submitted update their details. Each slot also has a Reopen button.

- Proforma invoices show one line per night.
- The product is now called Uppsolut and is available at its new web address.

FIXED

- The idle session timeout now signs people out as it should, and the timeout setting saves properly.
- A guest resubmitting eRegistration with blank fields could clear details already on file. This is fixed.
- Security hardening of the web application.

5.7.0 4 August 2026

A faster, more reliable database platform, clearer folios, and tighter rules for reservations and billing.

NEW

- Folios show charges and payments in one list, with the stay details in a Stay Summary. Proformas show payments already made.
- Each folio has a default payment method. Paying with a City Ledger method is what now bills the stay to a company account.
- The reservations list has one search box, date modes and a phone layout. Closed bookings are shaded and their actions limited.
- Channel booking references are shown on reservations and can be searched.
- Numbered charge codes (Group → Subgroup → 4-digit code), with a subgroup for each outlet. Spa and Excursion outlets link to their charge codes.
- Spa and Excursions add-ons are enabled for the whole enterprise, not property by property.
- An eRegistration button on every arrival row in Front Office.
- New properties get their go-live business date at setup, and the dashboard stays locked until the property is active. New users must change their temporary password at first sign-in.

IMPROVED

- Reservations can no longer be deleted. Use Cancel instead.
- Nothing posts to a folio before check-in, including cancellation and no-show fees. Money taken before arrival is recorded as a deposit.

- Booking arrival dates cannot be earlier than the business date.
- Front Office, page headers and summary cards are more compact on phones. Info hints replace long subheadings.
- The Hub is opened from the Account menu and has its own property switcher.
- Improved colours and accessibility throughout.

FIXED

- Searches ignore upper and lower case everywhere.
- Security hardening of channel-manager connections.

5.6.0 31 July 2026

Channel manager integration, guest self check-in by link, and a proper chart of charge codes.

NEW

- Channel manager integration through the Hub. Connect, check the connection, map room types and rate plans, and send availability and rates. Incoming OTA bookings become reservations, and every exchange is logged.
- Guest self check-in by eRegistration link. Guests enter their details, upload an ID photo and sign before arrival. The front desk reviews and applies the details during check-in.
- Charge Group → Subgroup → Code structure. Service charge and GST post automatically as linked lines.
- Invoices and proformas can be printed in detailed or summary style.
- Group blocks: hold rooms by type (taken off availability), link a block to a City Ledger account, route charges to a master folio, and use clearer block statuses with a schedule timeline.
- Stop-sale restrictions with an availability grid, and overbooking a room type after a confirmation.
- Room move can keep the original room type's rate.
- Optional room status updates at Night Audit.
- The app version is shown in the Account dialog.

IMPROVED

- Front Desk: richer summary cards, reservation-style tables on every tab, a full walk-in booking form and smoother back navigation.
- Printed documents take their branding from the property, with redesigned templates and outlet-specific headers.
- Payment methods are linked to charge codes, so every posting can be traced.
- Housekeeping occupancy follows the business date and shows the guest headcount.

FIXED

- After End of Day, everyone signed in to that property is now signed out with a notice, including enterprise admins.
- A registration-number problem that could stop check-in after End of Day is fixed.

5.5.0 26 July 2026

A full quality and security review, plus better Spa and Excursions booking screens.

NEW

- Spa and Excursions have the same Book / Schedule / History tabs. The Spa Schedule shows a therapist calendar.
- In-house Spa and Excursion bookings can be charged to the room or paid straight away.
- Spa search starts from the guest and checks their stay dates. Therapists can be linked to a staff user.
- On-screen notifications and consistent confirmation prompts for actions that cannot be undone.

IMPROVED

- Guards against double posting: Night Audit, Advance Bills, check-out, cancellation and reversals can no longer run twice at the same time.
- More accurate money totals for balances and cashier drawers. Currency exchange now balances the drawer.
- Spa and Excursion capacity is enforced, and departures that have already left cannot be booked.
- Early check-in before the arrival date is blocked.
- Clear error messages when a list fails to load. Long lists are searchable.

FIXED

- Security hardening of access controls and of stored email and file-transfer passwords.

5.4.0 25 July 2026

Point of Sale becomes Fast Post, focused on quick charges to guests and walk-ins.

NEW

- Fast Post (formerly Point of Sale). Walk-in bills open in a window with Tax Invoice, Void Bill and Payment. A History tab lists closed bills, which can be reopened on the same business day.

IMPROVED

- Fast Post only finds in-house guests when posting to a room.

5.3.0 25 July 2026

A guided check-in and a configurable Registration Card.

NEW

- A step-by-step check-in: Room, Identification, Registration Card, Confirm.
- A themed Registration Card you can set up yourself.
- The Green Tax registration number is shown on the reservation.

5.2.0 25 July 2026

Billing tools for the whole stay.

NEW

- Reverse a check-in or check-out.
- Interim Bill (a mid-stay statement) and Advance Bill (post upcoming nights in advance).
- Several named fee rules of each type, chosen per reservation.
- Named routing targets and a Travel Agent folio.
- Reservations show Due In and Due Out states automatically.

IMPROVED

- Check-out enforces settlement rules. Check-in is only allowed when the booking is ready.

5.1.0 24 July 2026

The first numbered release. It brings a redesigned reservation screen, the Spa module and a guided End of Day.

NEW

- A redesigned reservation detail screen, with Transport and Daily Details.
- Traces with an "alert on open" pop-up when a reservation is opened.
- The Spa module: treatments, therapists, rooms, availability, in-house and walk-in bookings, therapist requests and preferences.
- The Excursions module, with a calendar view.
- Each property has its own business date, which drives check-in and check-out, posting and End of Day.
- A step-by-step End of Day with snapshot reports, a per-date archive and Green Tax registration numbering.
- A reporting engine with Front Desk, Reservations, Revenue, Financial and Housekeeping reports.
- Folio routing instructions, and moving charges between folios and rooms. Deposit, cancellation and no-show fee rules.

IMPROVED

- Proforma invoices include the full projected cost of the stay, transport included.
- Cashier shifts are tied to each user, property and business date.
- A new icon set and a combined account and property menu.

Earlier development — July 2026

The first builds before numbered releases. They set up the core hotel system:

- Several properties under one enterprise, with role-based access.
- Reservations with a tape chart, group blocks, a front desk, housekeeping, maintenance and cashiering.

- Guest profiles with communications, identification, preferences and VIP levels.
- Revenue management: base rates, occupancy pricing, derived and negotiated rate plans, meal plans and allocations.
- Outlets and walk-in billing, custom tax profiles, Green Tax posting, a debtors module, confirmation letters and printed invoices and receipts.
